This prospectus constitutes a public offering of these securities only in those jurisdictions where they may be lawfully offered for sale therein and only by persons permitted to sell these securities.

CI GLOBAL ASSET MANAGEMENT

PROSPECTUS

Initial Public Offering and Continuous Offering April 9, 2025

CI Galaxy Solana ETF

CI Galaxy Solana ETF (the "ETF") is an exchange traded mutual fund that invests in SOL, digital assets that are created and transmitted through the operations of the Solana Network. Given the speculative nature of digital assets, including SOL, and the volatility of SOL markets, there is no assurance that the ETF will be able to meet its investment objective. An investment in the ETF is not intended as a complete investment program and is appropriate only for investors who have the capacity to absorb a loss of some or all of their investment. An investment in the ETF is considered high risk.

The ETF is offering U.S. dollar-denominated unhedged units (the "**ETF US$ Series Units**") and Canadian dollar-denominated unhedged units (the "**ETF C$ Unhedged Series Units**" and together with the ETF US$ Series Units, the "**Units**") for sale on a continuous basis by this prospectus and there is no minimum number of Units that may be issued. Units of the ETF are offered for sale at a price equal to the net asset value (the "**NAV**") of such Units in the applicable currency next determined following the receipt of a subscription order.

The ETF is an alternative mutual fund within the meaning of National Instrument 81-102 *Investment Funds* ("**NI 81-102**") established as a trust under the laws of the Province of Ontario. The ETF has the ability to invest in asset classes and use investment strategies that are not permitted for conventional mutual funds. While these strategies will be used in accordance with the ETF's investment objective and strategies, during certain market conditions, they may accelerate the pace at which your investment decreases in value. The ETF is subject to restrictions and practices contained in Canadian securities legislation applicable to alternative mutual funds, including NI 81-102, and is managed in accordance with these restrictions, except as otherwise permitted by exemptions provided by Canadian securities regulatory authorities.

CI Global Asset Management (a registered business name of CI Investments Inc.) ("**CI GAM**" or the "**Manager**"), a registered portfolio manager and investment fund manager, is the promoter, manager and the trustee of the ETF. The Manager is responsible for creating, structuring, managing and promoting the ETF and providing portfolio management services to the ETF. See "Organization and Management Details of the ETF – Manager". The Manager has retained Galaxy Digital Capital Management LP (the "**Subadvisor**") to act as the subadvisor for the ETF. The Subadvisor is a diversified digital asset management business with institutional experience managing third-party capital in alternative asset classes and has strong relationships and connectivity in the digital asset, cryptocurrency and blockchain technology sectors. The Subadvisor is an affiliate of Galaxy Digital Holdings Ltd. ("**Galaxy Digital**"), a technology-driven financial services and investment management firm in this sector and is listed on the Toronto Stock Exchange (TSX:GLXY). See

"Organization and Management Details of the ETF – Subadvisor". Cidel Trust Company ("**Cidel Custodian**") acts as the custodian of the assets of the ETF pursuant to the Cidel Custodian Agreement (as defined herein). Gemini Trust Company, LLC ("**Gemini**"), along with Coinbase, Inc. and Coinbase Custody Trust Company, LLC ("**Coinbase Custody**" and together with Coinbase, Inc., "**Coinbase**"), act as sub-custodians in respect of the ETF's holdings of SOL.

Investment Objective

CI Galaxy Solana ETF's investment objective is to provide holders of Units (the "**Unitholders**") with exposure to Solana tokens ("**SOL**") through an institutional-quality fund platform. See "Investment Objective". The ETF offers investors exposure to SOL by investing directly in SOL with the ETF's holdings of SOL priced based on the Bloomberg Galaxy Solana Index (the "**Solana Index**"), a SOL pricing source administered and calculated by Bloomberg Index Services Limited. The Solana Index is designed to measure the performance of a single SOL traded in U.S. dollars.

Listing of Securities

The Units have been conditionally approved for listing on the Toronto Stock Exchange (the "**TSX**") under the symbol "SOLX". Subject to satisfying the TSX's original listing requirements, the Units of the ETF will be listed on the TSX, and investors will be able to buy or sell such Units on the TSX through registered brokers and dealers in the province or territory where the investors reside. Investors may incur customary brokerage commissions in buying or selling Units. No fees are paid by investors to the Manager or the ETF in connection with buying or selling of Units on the TSX.

Additional Considerations

The Manager, on behalf of the ETF, has entered into agreements with registered dealers (each, a "**Designated Broker**" or "**Dealer**"), which among other things, enable such Dealers and the Designated Broker to purchase and redeem Units directly from the ETF. Unitholders may redeem Units for cash at a redemption price per Unit of 95% of the closing price for the Units on the TSX on the effective day of redemption, subject to a maximum redemption price per Unit equal to the NAV per Unit on the effective date of the redemption, less any applicable redemption fee determined by the Manager, in its sole discretion, from time to time. Unitholders are advised to consult their brokers or investment advisers before redeeming Units for cash. The ETF offers additional redemption options which are available where a Unitholder redeems a prescribed number of Units (a "**PNU**"). See "Purchases of Units" and "Redemption and Exchange of Units".

No underwriter, Designated Broker or Dealer has been involved in the preparation of this prospectus or has performed any review of the contents of this prospectus. The Canadian securities regulators have provided the ETF with a decision exempting it from the requirement to include a certificate of an underwriter in this prospectus. The Designated Broker and Dealers are not underwriters of the ETF in connection with the distribution of Units under this prospectus. While the ETF is a mutual fund under the securities legislation of certain provinces and territories of Canada, the ETF has been granted exemptive relief from certain provisions of Canadian securities legislation applicable to conventional mutual funds. See "Exemptions and Approvals".

Provided that the ETF qualifies as a "mutual fund trust" within the meaning of the *Income Tax Act* (Canada) as amended from time to time, and the regulations thereunder (the "**Tax Act**"), or the Units of a series of the ETF are listed on a "designated stock exchange" within the meaning of the Tax Act (which currently includes the TSX), the Units of the ETF or the Units of such series of the ETF, respectively, if issued on the date hereof, would on such date be qualified investments under the Tax Act for a trust governed by a registered retirement savings plan ("**RRSP**"), a registered retirement income fund ("**RRIF**"), a registered disability savings plan ("**RDSP**"), a deferred profit sharing plan ("**DPSP**"), a registered education savings plan

("**RESP**"), a tax-free savings account ("**TFSA**") or a first home savings account ("**FHSA**" and, collectively with an RRSP, RRIF, RDSP, DPSP, RESP and TFSA, the "**Registered Plans**").

There is no assurance that the ETF will be able to meet its investment objective. An investment in the ETF may be considered to be speculative and is appropriate only for investors who have the capacity to absorb investment losses of some or all of their investment and there are certain risks associated with an investment in Units. As the ETF invests in SOL on a passive basis, the ETF's holdings will not be actively managed and accordingly, will not be hedged or repositioned to attempt to take defensive positions if the price of SOL declines or is expected to decline. **For a discussion of the risks associated with an investment in Units, see "Risk Factors".**

During the period in which the ETF is in continuous distribution, additional information about the ETF will be available in its most recently filed annual financial statements, any interim financial statements filed after those annual financial statements, the most recently filed annual management report of fund performance, any interim management report of fund performance filed after that annual management report of fund performance and the most recently filed ETF Facts. These documents will be incorporated by reference into this prospectus which means that they legally form part of this prospectus. For further details, see "Documents Incorporated by Reference".

You can get a copy of these documents at your request, and at no cost, by calling 1-800-792-9355 (toll free) or by e-mail at service@ci.com or from your dealer. These documents are available on the internet at www.ci.com. These documents and other information about the ETF are also available on the website of SEDAR+ (the System for Electronic Data Analysis and Retrieval+) at www.sedarplus.ca.

GLOSSARY OF TERMS

In this prospectus, the following terms shall have the meanings set forth below, unless otherwise indicated.

"**affiliate**" has the meaning ascribed thereto in the *Business Corporations Act* (Ontario).

"**air drops**" has the meaning ascribed thereto under "Risk Factors – Risk Factors Relating to SOL – Air Drops".

"**AML**" has the meaning ascribed thereto under "Investment Strategy".

"**Bitcoin Network**" means the network of computers running the software protocol underlying bitcoin, which maintains the database of bitcoin ownership and facilitates the transfer of bitcoin among parties.

"**blockchain**" has the meaning ascribed thereto under "Overview of the Sector that the ETF Invests In".

"**Bloomberg**" has the meaning ascribed thereto under "Calculation of Net Asset Value – Disclaimer".

"**business day**" means any day on which the TSX is open for business.

"**Capital Gains Refund**" has the meaning ascribed thereto under "Income Tax Considerations - Taxation of the ETF".

"**CDS Participant**" means a participant in the Depositary.

"**Cidel Custodian**" means Cidel Trust Company, the custodian of the assets of the ETF, and its assigns and successors as may be appointed by the Manager from time to time.

"**Cidel Custodian Agreement**" means the amended and restated custodianship agreement dated March 17, 2023 between the Manager and Cidel Custodian as it may be amended from time to time.

"**Codes**" has the meaning ascribed thereto under "Organization and Management Details of the ETF – Conflicts of Interest".

"**Coinbase**" means Coinbase Custody Trust Company, LLC and Coinbase, Inc.

"**Coinbase Custody**" means Coinbase Custody Trust Company, LLC.

"**Coinbase Sub-Custodian Agreement**" means the sub-custodian agreement dated March 21, 2023 among the Manager, Cidel Custodian and Coinbase as it may be amended from time to time.

"**CRA**" means the Canada Revenue Agency.

"**CRS Rules**" has the meaning ascribed thereto under "Exchange of Tax Information".

"**DAR**" means Digital Asset Research fixings, a pricing algorithm using a time-weighted average price derived from eligible, non-outlier trades that occur within a 30-minute window prior to a specified close time.

"**Dealer**" means a registered dealer (that may or may not be a Designated Broker) that has entered into a Dealer Agreement with the Manager, on behalf of the ETF, pursuant to which the Dealer may subscribe for Units of the ETF as described under "Purchases of Units".

"**Dealer Agreement**" means an agreement between the Manager, on behalf of the ETF, and a Dealer.

"**Declaration of Trust**" means the amended and restated declaration of trust of the ETF dated as of April 21, 2020, as it may be supplemented, amended and/or restated from time to time.

"**Depositary**" or "**CDS**" means CDS Clearing and Depository Services Inc. and includes any successor corporation or any other depositary subsequently appointed by the ETF as the depositary in respect of the Units.

"**Designated Broker**" means a registered dealer that has entered into a Designated Broker Agreement with the Manager on behalf of the ETF, pursuant to which the Designated Broker agrees to perform certain duties in relation to the ETF.

"**Designated Broker Agreement**" means an agreement between the Manager, on behalf of the ETF, and the Designated Broker.

"**Distribution Record Date**" means a date determined by the Manager as a record date for the determination of Unitholders of the ETF entitled to receive a distribution.

"**DPSP**" has the meaning ascribed thereto under "Additional Considerations".

"**EIFEL Rules**" has the meaning ascribed thereto under "Risk Factors – Tax Risks".

"**ETF"** means CI Galaxy Solana ETF, a trust established under the laws of the Province of Ontario pursuant to the Declaration of Trust.

"**ETF C$ Unhedged Series Units**" means the Canadian dollar denominated unhedged units.

"**ETF US$ Series Units**" means the U.S. dollar denominated unhedged units.

"**Ethereum Network**" means the online, end user to end user computer network hosting a public transaction ledger, known as the blockchain, and the source algorithmic protocols governing such network. Ethereum is the network's native cryptocurrency.

"**FATF**" means the Financial Action Task Force, an inter-governmental body established to set standards and promote the effective implementation of legal, regulatory and operational measures for combating money laundering, terrorist financing and other related threats to the integrity of the international financial system.

"**FHSA**" has the meaning ascribed thereto under "Additional Considerations".

"**FinCEN**" has the meaning ascribed thereto under "Organization and Management Details of the ETF – Sub-Custodians".

"**Galaxy Digital**" has the meaning ascribed thereto on the cover page.

"**Gemini**" means Gemini Trust Company, LLC, a sub-custodian of the ETF in respect of the ETF's holdings of SOL pursuant to the Gemini Sub-Custodian Agreement.

"**Gemini Sub-Custodian Agreement**" means the sub-custodian agreement dated March 3, 2021 among Cidel Custodian, the ETF and Gemini as it may be amended from time to time.

"**Guidelines**" has the meaning ascribed thereto under "Proxy Voting Disclosure for Portfolio Securities Held".

"**hashrate**" refers to the amount of computing power that validators are using to validate the SOL blockchain, measured in hashes per second.

"**HSMs**" means hardware security modules.

"**IRC**" means the independent review committee of the ETF.

"**KYC**" means know-your-client.

"**Management Agreement**" has the meaning ascribed thereto under "Organization and Management Details of the ETF – Duties and Services to be Provided by the Manager".

"**Management Fee**" has the meaning ascribed thereto under "Fees and Expenses – Fees and Expenses Payable by the ETF – Management Fee".

"**Management Fee Distribution**" has the meaning ascribed thereto under "Fees and Expenses – Fees and Expenses Payable by the ETF – Management Fee Distributions".

"**Manager**" or "**CI GAM**" means CI Global Asset Management, in its capacity as manager of the ETF.

"**Net asset value of the ETF**" or "**NAV of the ETF**" on a particular date is equal to (i) the aggregate fair value of the assets of the ETF, less (ii) the aggregate fair value of the liabilities of the ETF.

"**Net asset value per Unit**" or "**NAV per Unit**" means, for a series of Units on any date, the number obtained by dividing the NAV of the ETF attributable to the series of Units on such date by the total number of Units of the series outstanding on such date.

"**NI 81-102**" means National Instrument 81-102 *Investment Funds* of the Canadian Securities Administrators, as it may be amended from time to time.

"**NI 81-107**" means National Instrument 81-107 *Independent Review Committee for Investment Funds* of the Canadian Securities Administrators, as it may be amended from time to time.

"**OECD**" means the Organization for Economic Co-operation and Development.

"**OTC**" means over-the-counter.

"**Participating Jurisdictions**" has the meaning ascribed thereto under "Exchange of Tax Information".

"**Permitted Merger**" has the meaning ascribed thereto under "Unitholder Matters – Permitted Mergers".

"**PNU**" means a prescribed number of Units of a series of the ETF as determined by the Manager from time to time for the purpose of subscription orders, redemptions or for such other purposes as the Manager may determine.

"**PoH**" means Proof of History, as further described under "Overview of the Sector that the ETF Invests In – Introduction to the Solana Network".

"**PoS**" means Proof of Stake, as further described under "Overview of the Sector that the ETF Invests In – A Different Goal than Bitcoin and Ethereum".

"**PoW**" means Proof of Work, as further described under "Overview of the Sector that the ETF Invests In – A Different Goal than Bitcoin and Ethereum".

"**Products**" has the meaning ascribed thereto under "Calculation of Net Asset Value – The Solana Index".

"**RDSP**" has the meaning ascribed thereto under "Additional Considerations".

"**Registered Plans**" has the meaning ascribed thereto under "Additional Considerations".

"**Registrar and Transfer Agent**" means TSX Trust Company and its successors as may be appointed by the Manager from time to time.

"**RESP**" has the meaning ascribed thereto under "Additional Considerations".

"**RRIF**" has the meaning ascribed thereto under "Additional Considerations".

"**RRSP**" has the meaning ascribed thereto under "Additional Considerations". "**scaling**" means increasing the capacity of transactions a network can handle at the core blockchain layer.

"**SIFT Rules**" means the provisions of the Tax Act providing for a tax on certain income earned by a "SIFT trust" or "SIFT partnership", as those terms are defined in the Tax Act.

"**SIFT trust**" means a trust to which the SIFT Rules apply.

"SOL" means digital assets that are created and transmitted through the operations of the Solana Network.

"**SOL Source**" has the meaning ascribed thereto under "Overview of the Sector that the ETF Invests in – Purchasing SOL for the ETF's Portfolio".

“**Solana Index**” means the Bloomberg Galaxy Solana Index, an index designed to measure the performance of one single SOL traded in U.S. dollars.

“**Solana Network**” has the meaning ascribed thereto under “Overview of the Sector that the ETF Invests In”.

“**Staking Arrangements**” means the staking of SOL held in the ETF’s portfolio, to be conducted at the discretion of the Manager.

“**Staking Service Fee**” has the meaning ascribed thereto under “Prospectus Summary – Staking Service Fee”.

“**Sub-Custodians**” means Gemini and Coinbase and individually, a “**Sub-Custodian**”.

“**Subadvisor**” means Galaxy Digital Capital Management LP, in its capacity as subadvisor of the ETF.

“**Subadvisor Agreement**” has the meaning ascribed thereto under “Organization and Management Details of the ETF – Details of the Subadvisor Agreement”.

“**substituted property**” has the meaning ascribed thereto under “Income Tax Considerations – Taxation of the ETF”.

“**Tax Act**” means the *Income Tax Act* (Canada) and the regulations thereunder, as it may be amended from time to time.

“**Tax Amendment**” means a proposed amendment to the Tax Act publicly announced by the Minister of Finance (Canada) prior to the date hereof.

“**TFSA**” has the meaning ascribed thereto under “Additional Considerations”.

“**TPS**” means transactions per second, denoting transaction speed on a blockchain.

“**Trading Day**” means any day on which the TSX is open for business.

“**Trustee**” means CI Global Asset Management, in its capacity as trustee of the ETF.

“**TSX**” means the Toronto Stock Exchange.

“**unbonding**” has the meaning ascribed thereto under “Risk Factors – Risk Factors Relating to Staking Arrangements – Staking Timeline and Unbonding Periods Risk”.

“**United States**” or “**U.S.**” means the United States of America.

“**Unitholders**” means, unless the context requires otherwise, the owners of the beneficial interest in the Units.

“**Units**” means the ETF US$ Series Units and the ETF C$ Unhedged Series Units.

“**validators**” has the meaning ascribed thereto under “Investment Strategy – Staking”.

“**Valuation Agent**” means CIBC Mellon Trust Company in its capacity as valuation agent of the ETF.

“**Valuation Day**” has the meaning ascribed thereto under “Calculation of Net Asset Value”.

“**Valuation Time**” has the meaning ascribed thereto under “Calculation of Net Asset Value”.

“**VDF**” has the meaning ascribed thereto under “Overview of the Sector that the ETF Invests In – A Different Goal than Bitcoin and Ethereum”.

CI Global Asset Management is a registered business name of CI Investments Inc.

PROSPECTUS SUMMARY

The following is a summary of the principal features of the Units of the ETF and should be read together with the more detailed information, financial data and financial statements contained elsewhere in this prospectus or incorporated by reference in this prospectus. Certain capitalized terms used, but not defined in this summary, are defined in the "Glossary of Terms". Unless otherwise indicated, all references to dollar amounts in this prospectus are to U.S. dollars and all references to times in this prospectus summary and prospectus are to Toronto time.

Issuers:	CI Galaxy Solana ETF (the "**ETF**") is an alternative mutual fund within the meaning of National Instrument 81-102 *Investment Funds* ("**NI 81-102**"), established as a trust under the laws of the Province of Ontario pursuant to the Declaration of Trust (as defined herein) by CI GAM (in such capacity, the "**Trustee**") as trustee of the ETF. See "Overview of the Legal Structure of the ETF". The ETF has the ability to invest in asset classes and use investment strategies that are not permitted for conventional mutual funds. While these strategies will be used in accordance with the ETF's investment objective and strategies, during certain market conditions, they may accelerate the pace at which your investment decreases in value. The ETF is subject to restrictions and practices contained in Canadian securities legislation applicable to alternative mutual funds, including NI 81-102, and is managed in accordance with these restrictions, except as otherwise permitted by exemptions provided by Canadian securities regulatory authorities.
Offering:	The ETF is offering U.S. dollar denominated unhedged units (the "**ETF US$ Series Units**") and Canadian dollar denominated unhedged units (the "**ETF C$ Unhedged Series Units**", and together with the ETF US$ Series Units, the "**Units**") for sale on a continuous basis by this prospectus.
Continuous Distribution:	The Units are offered for sale on a continuous basis by this prospectus and there is no maximum number of Units that may be issued. The Units are offered for sale at a price equal to the NAV of such Units in the applicable currency determined following the receipt of a subscription order. The Units have been conditionally approved for listing on the TSX under the symbol "SOLX". Subject to satisfying the TSX's original listing requirements, the Units of the ETF will be listed on the TSX, and investors will be able to buy or sell such Units on the TSX through registered brokers and dealers in the province or territory where the investors reside. Investors may incur customary brokerage commissions in buying or selling Units. No fees are paid by investors to the Manager or the ETF in connection with buying or selling of Units on the TSX. The ETF issues Units directly to the applicable Designated Broker and Dealers for cash. See "Plan of Distribution" and "Purchases of Units – Issuance of Units".

Investment Objective: CI Galaxy Solana ETF's investment objective is to provide holders of Units (the "**Unitholders**") exposure to Solana tokens ("**SOL**") through an institutional-quality fund platform.
See "Investment Objective".

Investment Strategy: To achieve its investment objective, the ETF will invest directly in SOL and will utilize high-quality service providers in the digital assets sector (e.g., digital asset custodians, trading platforms and trading counterparties) in order to manage the assets of the ETF.

The ETF may also, subject to any required regulatory approval, stake SOL held in its portfolio in order to earn rewards for the ETF, which rewards will, following the deduction of applicable fees and expenses, accrue to the ETF's NAV for the benefit of Unitholders. The Manager intends to adopt a measured approach to Staking Arrangements, taking into account, amongst other factors, the liquidity needs of the ETF and intends to initially target staking up to 50% of the SOL held in the portfolio of the ETF. See "Investment Strategy – Staking".

The ETF's portfolio is priced based on, and the NAV of the ETF is calculated using, the Bloomberg Galaxy Solana Index (the "**Solana Index**") or such other index as the Manager may select from time to time, in its discretion. The Solana Index is designed to measure the performance of a single SOL traded in U.S. dollars.

The Solana Index is calculated based on the time-weighted average price from eligible non-outlier trades that occur on eligible exchanges (as determined by Digital Asset Research, Inc.) between 3:30 pm EST to 4:00 pm EST. The Solana Index is owned and administered by Bloomberg Index Services Limited and is co-branded with the Subadvisor; however, the Subadvisor has no input into the pricing of the Solana Index.

In the event that the Manager determines that it is in the best interest of the ETF to select another pricing source for the SOL held by the ETF from time to time, the Manager will, in selecting such alternative pricing source, have regard for the appropriateness and reliability of the data with particular regard for the adequacy of anti-money laundering ("**AML**") and know-your-client ("**KYC**") process protections and the protocols designed to address potential price manipulation.As the ETF invests in SOL on a passive basis, the ETF's holdings will not be actively managed and accordingly, will not be hedged or repositioned to attempt to take defensive positions if the price of SOL declines or is expected to decline.

The Manager has retained Galaxy Digital Capital Management LP (the "**Subadvisor**") to act as the subadvisor for the ETF. The Subadvisor executes all SOL trading on behalf of the ETF and facilitates Staking

Arrangements in respect of the ETF's SOL pursuant to the terms of the Subadvisor Agreement.

SOL is purchased for the ETF in the over-the-counter ("**OTC**") market through counterparties approved by the Subadvisor. All trading counterparties must go through the Subadvisor's AML and KYC processes, which has been modeled on programs established under the U.S. Bank Secrecy Act.

The ETF may also hold cash and cash equivalents or other money market instruments in order to meet its current obligations.

The ETF does not intend to use derivatives in connection with its investment strategy and the ETF does not intend to pay cash distributions.

Generally, the ETF does not intend to borrow money or employ other forms of leverage to acquire SOL for its portfolio. The ETF may however borrow money on a temporary short-term basis to acquire SOL in connection with a subscription for Units by a Dealer. Any borrowing by the ETF will be made in accordance with the borrowing restrictions applicable to an alternative mutual fund under NI 81-102.

The ETF's functional and presentation currency is in U.S. dollars.

The ETF will purchase SOL which is currently denominated in U.S. dollars.

See "Investment Strategy".

Special Considerations for Purchasers:

The provisions of the so-called "early warning" requirements set out in Canadian securities legislation do not apply in connection with the acquisition of Units of the ETF. In addition, the ETF is entitled to rely on exemptive relief from the Canadian securities regulatory authorities to permit a Unitholder of the ETF to acquire more than 20% of the Units of the ETF through purchases on the TSX without regard to the takeover bid requirements of applicable Canadian securities legislation.

See "Attributes of the Securities – Description of the Securities Distributed".

Distributions:

It is not anticipated that the ETF will make cash distributions. The amount of ordinary cash distributions, if any, will be based on the Manager's assessment of prevailing market conditions, anticipated cash flow and anticipated expenses of the ETF from time to time, and will be made at the discretion of the Manager.

See "Distribution Policy".

Redemptions and Exchanges:

In addition to the ability to sell Units on the TSX, Unitholders may redeem Units for cash at a redemption price per Unit equal to 95% of the closing price for the Units on the TSX on the effective day of the redemption, subject to a maximum redemption price per Unit equal to the NAV per Unit on the effective day of redemption, less any applicable redemption fee determined by the Manager, in its sole discretion, from time to time. The redemption price will be paid in U.S. dollars.

The ETF also offers additional redemption and exchange options which are available where a Dealer, Designated Broker, or Unitholder redeems a prescribed number of Units ("**PNU**") as determined by the Manager from time to time for the purpose of subscription orders, redemptions or for other purposes.

See "Redemption and Exchange of Units".

Income Tax Considerations:

This summary of Canadian federal income tax considerations for the ETF and for Canadian resident Unitholders is subject in its entirety to the qualifications, limitations and assumptions set out under "Income Tax Considerations".

A Unitholder who is an individual (other than a trust) resident in Canada and who holds Units as capital property (all within the meaning of the Tax Act) will generally be required to include in the Unitholder's income for tax purposes for any year the amount of net income and net taxable capital gains of the ETF paid or payable to the Unitholder in the year and deducted by the ETF in computing its income. Any return of capital from the ETF paid or payable to a Unitholder in a taxation year will reduce the adjusted cost base of the Unitholder's Units. To the extent that a Unitholder's adjusted cost base would otherwise be a negative amount, the negative amount will be deemed to be a capital gain realized by the Unitholder and the adjusted cost base of the Unit to the Unitholder will be increased by the amount of such capital gain. Any loss of the ETF cannot be allocated to, and cannot be treated as a loss of, the Unitholders. Upon the actual or deemed disposition of a Unit, including redemption of a Unit, a capital gain (or a capital loss) will generally be realized by the Unitholder to the extent that the proceeds of disposition of the Unit exceeds (or is less than) the aggregate of the adjusted cost base to the Unitholder of the Unit and any reasonable costs of disposition.

The Declaration of Trust requires that the ETF distribute its net income and net realized capital gains, if any, for each taxation year to Unitholders to such an extent that the ETF will not be liable in respect of the taxation year for ordinary income tax.

Each investor should satisfy himself or herself as to the federal and provincial tax consequences of an investment in Units by obtaining advice from his or her tax advisor.

See "Income Tax Considerations".

Eligibility for Investment:

Provided that the ETF qualifies (or is deemed to qualify) as a "mutual fund trust" within the meaning of the Tax Act or the Units of a series of the ETF are listed on a "designated stock exchange" within the meaning of the Tax Act (which currently includes the TSX), the Units of the ETF or the Units of such series of the ETF, respectively, if issued on the date hereof,

	would on such date be qualified investments under the Tax Act for a trust governed by a Registered Plan. See "Income Tax Considerations – Taxation of Registered Plans".
Documents Incorporated by Reference:	During the period in which the ETF is in continuous distribution, additional information about the ETF will be available in its most recently filed annual financial statements, any interim financial statements filed after those annual financial statements, the most recently filed annual management report of fund performance, any interim management report of fund performance filed after that annual management report of fund performance, and the most recently filed ETF Facts document. These documents will be incorporated by reference into this prospectus. Documents incorporated by reference into this prospectus legally form part of this prospectus just as if they were printed as part of this prospectus. These documents are publicly available on the website of the ETF at www.ci.com and may be obtained upon request, at no cost, by calling 1-800-792-9355 (toll free) or by e-mail at service@ci.com or by contacting your dealer. These documents and other information about the ETF are also publicly available at www.sedarplus.ca. See "Documents Incorporated by Reference".
Termination:	The ETF does not have a fixed termination date but may be terminated at the discretion of the Manager in accordance with the terms of the Declaration of Trust. See "Termination of the ETF".
Risk Factors:	An investment in Units is subject to certain risk factors, including risks related to SOL and risks relating to an investment in the ETF. Such risks are described under the heading "Risk Factors".

Organization and Management of the ETF

Manager, Trustee and Portfolio Manager:	CI GAM, a registered portfolio manager and investment fund manager, is the manager, trustee and portfolio manager of the ETF. The Manager performs the management functions, including the day-to-day management of the ETF, and provides or arranges for the provision of all administrative and management services required by the ETF. CI GAM, in its capacity as portfolio manager, provides investment advisory and portfolio management services to the ETF. The principal office of CI GAM is located at 15 York Street, Second Floor, Toronto Ontario M5J 0A3. CI Global Asset Management is a registered business name of CI Investments Inc. See "Organization and Management Details of the ETF".
Promoter:	CI GAM is also the promoter of the ETF. CI GAM took the initiative in founding and organizing the ETF and is, accordingly, the promoter of the ETF within the meaning of securities legislation of certain provinces and territories of Canada. See "Organization and Management Details of the ETF – Promoter"
Subadvisor:	Galaxy Digital Capital Management LP acts as the Subadvisor for the ETF. The Subadvisor is located in New York, New York. See "Organization and Management Details of the ETF – Subadvisor".
Custodian:	Cidel Trust Company ("**Cidel Custodian**") is the custodian of the assets of the ETF pursuant to the Cidel Custodian Agreement. Cidel Custodian is a federally regulated trust company based in Calgary, Alberta and provides services to the ETF from its office in Toronto, Ontario. Cidel Custodian is a wholly-owned subsidiary of Cidel Bank Canada, a Schedule II Bank regulated by the Office of the Superintendent of Financial Institutions (OSFI). Cidel Custodian may appoint sub-custodians in accordance with NI 81-102. Cidel Custodian is independent of the Manager. See "Organization and Management Details of the ETF – Custodian".
Sub-Custodians:	*Gemini Trust Company, LLC* Gemini Trust Company, LLC (the "**Gemini**") acts as a sub-custodian of the ETF in respect of the ETF's holdings of SOL pursuant to the Gemini Sub-Custodian Agreement (as defined herein). The address of Gemini is 600, 3rd Avenue, 2nd Floor, New York, New York, U.S. Gemini is a trust company licensed and regulated by the New York State Department of Financial Services and is qualified to act as a sub-custodian of the ETF for assets held outside of Canada in accordance with NI 81-102. *Coinbase Entities* Coinbase Custody Trust Company, LLC ("**Coinbase Custody**") and Coinbase, Inc. ("**Coinbase**") act as a sub-custodian of the ETF pursuant to the Coinbase

	Sub-Custodian Agreement (as defined herein). The address of Coinbase Custody is Suite 2400 & 2500 One Madison Avenue, New York, NY 10010, U.S. Coinbase Custody is duly organized and existing under the laws of New York and is a New York State chartered limited purpose trust company that is authorized under Article III § 96 of the New York Banking Law to provide custodial services with respect to digital assets. Coinbase is duly organized and existing under the laws of the State of Delaware. See "Organization and Management Details of the ETF – Sub-Custodians".
Valuation Agent:	CIBC Mellon Trust Company (the "**Valuation Agent**") is the valuation agent of the ETF and provide accounting and valuation services for the ETF. See "Organization and Management Details of the ETF – Valuation Agent".
Auditors:	The auditors of the ETF are Ernst & Young LLP. The auditors are independent with respect to the ETF within the meaning of the Rules of Professional Conduct of the Chartered Professional Accountants of Ontario. The head office of Ernst & Young LLP is located in Toronto, Ontario. See "Organization and Management Details of the ETF – Auditors".
Registrar and Transfer Agent:	TSX Trust Company (the "**Registrar and Transfer Agent**") is the registrar and transfer agent for the Units pursuant to a master registrar and transfer agency agreement. The Registrar and Transfer Agent is independent of the Manager. See "Organization and Management Details of the ETF – Registrar and Transfer Agent".

Summary of Fees and Expenses

The following table lists the fees and expenses payable by the ETF, and the fees and expenses that Unitholders may have to pay if they invest in the ETF. Unitholders may have to pay some of these fees and expenses directly. Alternatively, the ETF may have to pay some of these fees and expenses, which will therefore reduce the value of an investment in the ETF. For further particulars, see "Fees and Expenses".

Type of Fee:	**Description**
Fees and Expenses Payable by the ETF	
Management Fee:	An annual management fee (the "**Management Fee**") of 0.40% of the NAV of each series of the ETF, calculated daily and payable monthly in arrears, plus applicable taxes, is paid to the Manager. The Subadvisor is remunerated by the Manager out of the Management Fee. The Manager may, at its discretion, agree to charge a reduced fee as compared to the fee it would otherwise be entitled to receive from the ETF with respect to large investments in the ETF by Unitholders. Such a reduction will be dependent upon a number of factors, including the amount invested, the total assets of the ETF under administration and the expected amount of account activity. In such cases, an amount equal to the difference between the fee otherwise chargeable and the reduced fee will be distributed by the ETF to the applicable Unitholders as management fee distributions. See "Fees and Expenses" and "Income Tax Considerations".
Staking Service Fee:	In addition to the Management Fee, the Manager is entitled to receive a fee equal to a portion of the staking rewards generated for the ETF by Staking Arrangements (net of the fees payable to the validator) such that no less than 65% of the rewards accrue to the ETF and up to 35% of the rewards accrue to the Manager (the "**Staking Service Fee**"). The Staking Service Fee will be calculated daily and paid monthly, in arrears, plus applicable taxes, and is intended to compensate the Manager for the additional work required to administer Staking Arrangements for the ETF as described below under "Investment Strategy". The Staking Service Fee charged by the Manager will only be deducted from any rewards generated by Staking Arrangements which will generate income to the ETF.
Operating Expenses:	In addition to the Management Fee, the ETF pays for all ordinary expenses incurred in connection with its operation and administration. Unless otherwise waived or reimbursed by the Manager, and subject to compliance with NI 81-102, the expenses for the ETF include, as applicable, without limitation: all costs and expenses associated with the execution of transactions in respect of the ETF's investment in SOL and the ETF's Staking Arrangements; audit fees; fees payable to third-party service providers; trustee and custodial expenses including fees payable to Cidel Custodian and the Sub-Custodians, as applicable; valuation, accounting and record keeping costs; legal expenses; prospectus preparation and filing expenses; costs associated with delivering documents to Unitholders; listing fees and expenses and other administrative expenses and costs incurred in connection with continuous public filing requirements; costs and expenses of preparing

financial and other reports, costs and expenses arising as a result of complying with all applicable laws, regulations and policies; Depositary fees; bank related fees and interest charges; extraordinary expenses; reports to Unitholders and servicing costs; registrar and transfer agent fees; fees and expenses of the members of the independent review committee (the "**IRC**"); expenses related to compliance with National Instrument 81-107 *Independent Review Committee for Investment Funds* ("**NI 81-107**"); fees and expenses relating to the voting of proxies by a third party; premiums for directors' and officers' insurance coverage for the members of the IRC; income taxes; all applicable sales taxes; brokerage expenses and commissions; and withholding taxes. Such expenses also include expenses of any action, suit or other proceedings in which or in relation to which the Manager, the Subadvisor, Cidel Custodian or the Sub-Custodians, the IRC or any of their respective officers, directors, employees, consultants or agents are entitled to, as indemnified by the ETF.

See "Fees and Expenses".

Expenses of the Issue: All expenses related to the issuance of Units of the ETF shall be borne by the ETF unless otherwise waived or reimbursed by the Manager.

See "Fees and Expenses".

Fees and Expenses Payable Directly by Unitholders

Redemption Fee: This fee, which is payable to the ETF, does not apply to Unitholders who buy and sell their Units through the facilities of the TSX.

An amount as may be agreed to between the Manager and the Designated Broker or a Dealer of the ETF may be charged by the Manager at its discretion, on behalf of the ETF, to the Designated Broker and/or Dealers to offset certain transaction costs including brokerage expenses, commissions and other costs and expenses associated with the issue, exchange or redemption of Units of the ETF to or by such Designated Broker and/or Dealer. The current redemption fee of the ETF is available upon request.

See "Redemption and Exchange of Units".

OVERVIEW OF THE LEGAL STRUCTURE OF THE ETF

The ETF is an alternative mutual fund within the meaning of NI 81-102, established as a trust under the laws of the Province of Ontario pursuant to an amended and restated declaration of trust dated April 21, 2020, as may be supplemented, amended and/or amended and restated from time to time (the "**Declaration of Trust**"). The manager, trustee, promoter and portfolio manager of the ETF is CI GAM. The principal office of the Manager is located at 15 York Street, Second Floor, Toronto, Ontario, M5J 0A3. CI GAM is a registered business name of CI Investments Inc.

The ETF is a mutual fund under the securities legislation of certain provinces and territories of Canada, however certain provisions of Canadian securities legislation applicable to conventional mutual funds do not apply to the ETF because the ETF is an "alternative mutual fund" within the meaning of NI 81-102. The ETF is subject to restrictions and practices contained in Canadian securities legislation applicable to alternative mutual funds, including NI 81-102, and is managed in accordance with these restrictions, except as otherwise permitted by exemptions provided by Canadian securities regulatory authorities.

The Units have been conditionally approved for listing on the TSX under the symbol "SOLX". Subject to satisfying the TSX's original listing requirements, the Units of the ETF will be listed on the TSX, and investors will be able to buy or sell such Units on the TSX through registered brokers and dealers in the province or territory where the investors reside. Investors may incur customary brokerage commissions in buying or selling Units. No fees are paid by investors to the Manager or the ETF in connection with buying or selling of Units on the TSX.

INVESTMENT OBJECTIVE

The CI Galaxy Solana ETF's investment objective is to provide Unitholders exposure to Solana tokens ("**SOL**") through an institutional-quality fund platform.

The fundamental investment objective of the ETF may not be changed except with the approval of its Unitholders. See "Unitholder Matters".

INVESTMENT STRATEGY

To achieve its investment objective, the ETF will invest directly in SOL and will utilize high-quality service providers in the digital assets sector (e.g., digital asset custodians, trading platforms and trading counterparties) in order to manage the assets of the ETF.

The ETF may also, subject to any required regulatory approval, stake SOL held in its portfolio in order to earn rewards for the ETF, which rewards will, following the deduction of applicable fees and expenses, accrue to the ETF's NAV for the benefit of Unitholders. The Manager intends to adopt a measured approach to Staking Arrangements, taking into account, amongst other factors, the liquidity needs of the ETF and intends to initially target staking up to 50% of the SOL held in the portfolio of the ETF. See "Investment Strategy – Staking".

The ETF's portfolio is priced based on, and the NAV of the ETF is calculated using, the Bloomberg Galaxy Solana Index (the "**Solana Index**") or such other index as the Manager may select from time to time, in its discretion. The Solana Index is designed to measure the performance of a single SOL traded in U.S. dollars.

The Solana Index is calculated based on the time-weighted average price from eligible non-outlier trades that occur on eligible exchanges (as determined by Digital Asset Research, Inc.) between 3:30 pm EST to 4:00 pm EST. The Solana Index is owned and administered by Bloomberg Index Services Limited and is co-branded with the Subadvisor; however, the Subadvisor has no input into the pricing of the Solana Index.

In the event that the Manager determines that it is in the best interest of the ETF to select another pricing source for SOL held by the ETF from time to time, the Manager will, in selecting such alternative pricing source, have regard for the appropriateness and reliability of the data with particular regard for the adequacy of AML and KYC process protections and the protocols designed to address potential price manipulation.

As the ETF invests in SOL on a passive basis, the ETF's holdings will not be actively managed and accordingly, will not be hedged or repositioned to attempt to take defensive positions if the price of SOL declines or is expected to decline.

The Manager has retained Galaxy Digital Capital Management LP (the "**Subadvisor**") to act as the subadvisor for the ETF. The Subadvisor executes all SOL trading on behalf of the ETF and facilitates Staking Arrangements in respect of the ETF's SOL pursuant to the terms of the Subadvisor Agreement.

SOL is purchased for the ETF in the OTC market through counterparties approved by the Subadvisor. All trading counterparties must go through the Subadvisor's AML and KYC processes, which has been modeled on programs established under the U.S. *Bank Secrecy Act*.

The ETF may also hold cash and cash equivalents or other money market instruments in order to meet its current obligations.

The ETF does not intend to use derivatives in connection with its investment strategy and does not intend to pay cash distributions.

Generally, the ETF does not intend to borrow money or employ other forms of leverage to acquire SOL for its portfolio. The ETF may however borrow money on a temporary short-term basis to acquire SOL in connection with a subscription for Units by a Dealer. Any borrowing by the ETF will be made in accordance with the borrowing restrictions applicable to an alternative mutual fund under NI 81-102.

The ETF's functional and presentation currency is and the investor's investment will be made in U.S. dollars (although the ETF and its investors are required to compute their income and gains for Canadian tax purposes in Canadian dollars – see "Income Tax Considerations"). The ETF will purchase SOL which is currently denominated in U.S. dollars.

Staking

The ETF intends to stake a portion of the ETF's SOL through one or more staking service providers facilitated by the Sub-Custodians, which may include a staking service provider affiliated with the Subadvisor. The staking service providers will use hardware, software and other services necessary to establish validator nodes and stake the ETF's SOL on the Solana Network. As a result of any staking arrangement in which the ETF may engage by delegating SOL to a validator, the ETF expects to receive staking rewards of SOL. In facilitating the ETF's Staking Arrangements, the Subadvisor will cause SOL held in the ETF's portfolio to be staked through one or more staking service providers with experience acting as a validator. Prior to a staking service provider being allowed to act as validator, the Manager and/or Subadvisor will conduct due diligence on such staking service provider. The staking service provider exercises no discretion as to the amount of the ETF's SOL to be staked or the timing of Staking Arrangements (other than as is incidental in establishing or deactivating validator nodes). The Sub-Custodians will maintain exclusive possession and control of the private keys associated with the cold storage wallet into which the ETF's staked SOL may be unbonded, and into which staking rewards will be deposited, at all times. For clarity, when staking, the Subadvisor will exercise its discretion to direct the staked voting power of the ETF's staked SOL to the validator(s) operated by one or more staking service providers as selected by the Subadvisor. The staked

SOL may only be unbonded to the cold storage wallets maintained by the Sub-Custodian, and all staking rewards will also be deposited to cold storage wallets. The Subadvisor intends to initially use staking service providers facilitated by the Sub-Custodians, which may include a staking service provider affiliated with the Subadvisor (which would result in the payment of fees by the ETF to such staking service provider affiliated with the Subadvisor). However, the Subadvisor or the Manager may in the future, at its discretion, engage an affiliate of the Manager to provide staking services to the ETF through such affiliate's proprietary staking software. Neither the Subadvisor nor the Manager will use an affiliate of the Manager as a staking service provider if the net commission rate charged to the ETF would be higher than what could be charged if an acceptable third-party staking service provider (including an affiliate of the Subadvisor) was used instead. In determining whether to use an affiliate of the Manager, the Subadvisor and the Manager will also consider all qualitative and quantitative factors including, but not limited to, the security of the validator and the staked SOL, the expected net staking yield of the validator, as well as the expected uptime of the validator in performing Staking Arrangements.

The blockchain networks associated with certain digital assets enable holders to earn rewards by participating in transaction confirmation activities through a process known as "staking". Staking refers to Proof of Stake (PoS) consensus protocols, which are mechanisms for ensuring that transactions are properly recorded on a blockchain. Owners who stake a particular blockchain's native currency validate the block transactions (or may delegate the currency to others who validate block transactions), and validators with the most holdings (which may include assets "delegated" to them) are generally able to validate at a higher rate, proportional to their amount staked. Blockchain networks that employ PoS protocols generally rely on "**validators**". Validators are network node operators that serve to verify the accuracy of data being recorded on the blockchain. Validators are typically rewarded in digital assets for their transaction confirmation activities. In order to become a validator, a node operator is required to "stake" digital assets (again, possibly including assets delegated to them), which is generally accomplished by locking digital assets in the relevant blockchain network. Staked digital assets essentially function as a form of collateral. If validators act maliciously or incompetently, they may lose their staked digital assets and their access to the particular blockchain network through processes known as "slashing" and "jailing". Slashing and jailing are designed to incentivize validators to act with integrity while validating transactions.

Staking has become one of the most common technologies used by blockchains, including the Solana Network, to secure their networks. Unlike traditional digital currency mining, which is used to mine older blockchains like Bitcoin and Ethereum 1.0, staking technology uses validation rights attached to digital asset ownership to make digital asset transactions secure, reliable and sustainable. Please see "Overview of the Sector that the ETF Invests in – Staking of SOL" for more information on staking.

OVERVIEW OF THE SECTOR THAT THE ETF INVESTS IN

The ETF invests substantially all of its assets in SOL. SOL is the native cryptocurrency that powers the "**Solana Network**" – a decentralized, open source protocol of a peer-to-peer computer network, which creates the decentralized public transaction ledger, known as the "**blockchain**", on which all transactions are recorded. The Solana Network uses this technology to create and run decentralized applications that enable users to make agreements, known as "smart contracts" and conduct transactions directly with each other to buy, sell and trade goods and services.

Application developers and other participants on the Solana Network use SOL to pay the transaction fees associated with creating and running applications on the Solana Network. Such fees are also referred to as "**gas**", which is the cost to perform a transaction on the Solana Network. Validators, those who help validate or process transactions on the Solana Network and thereby create new blocks of transactions to add to the blockchain, are compensated for their services in SOL. In addition to its use as "gas" on the Solana Network, SOL is also used to reward validators for securing the network (and, where applicable, to reward holders of SOL that delegate SOL to validators) and is also traded as a digital currency on digital asset trading platforms like other cryptocurrencies.

The Manager believes the advantages of investing in Units of the ETF to obtain exposure to SOL are as follows:

(a) *Expedient way to obtain exposure to SOL* – The ETF provides investors with a convenient way to get exposure to SOL and the SOL market. The ETF also offers safeguards such as monitoring and oversight of the ETF's SOL by the Subadvisor which has institutional experience managing capital in the digital assets and the cryptocurrency sector, as well as operational efficiencies provided by the Manager which has more than forty years of experience managing a variety of Canadian, global, industry and alternative funds.

(b) *Secure storage of SOL* – The ETF's SOL is generally stored in a Sub-Custodian's segregated cold storage system, protected in accordance with industry leading protocol. The Sub-Custodians are licensed and regulated by the New York State Department of Financial Services to act as custodians of SOL. The Sub-Custodians generally store the ETF's SOL offline using segregated cold storage SOL addresses and the ETF's cold storage private keys have no contact with the internet which is intended to safeguard the ETF's SOL from theft, loss, destruction and other issues such as technological attacks. The ETF's SOL is only held in "hot" storage by a Sub-Custodian on a temporary basis in order to facilitate deposits and redemptions.

Introduction to the Solana Network

Blockchain technology was introduced widely by Bitcoin in 2009, as a way to track digital value ownership in a secure manner through a shared, decentralized public ledger. The technology facilitated transactions without a centralized intermediary in a secure and transparent way.

The Solana Network was proposed in 2017 when founder Anatoly Yakovenko published a whitepaper draft detailing a new timekeeping technique for distributed systems called Proof of History ("**PoH**"). The goal of PoH was to solve the scalability limitations of the Bitcoin Network and the Ethereum Network, which require time to reach consensus for new transactions to be validated and added to the blockchain.

Like the Bitcoin Network and the Ethereum Network, the Solana Network operates via a global network of computers. The Solana Network assembles and runs smart contracts – transactions and agreements to be carried out among anonymous parties without the need for a central authority, legal system or external enforcement mechanism. Smart contracts run exactly as programmed, which greatly reduces the risk of fraud, and are self-executing. Once certain conditions are proven to have been met, such as the transfer of a payment, the merchandise is conveyed or made accessible to the buyer.

Within the Solana Network, there are two use cases for its native token, SOL. One is staking, where token holders can stake their SOL and receive a reward, while the other is payment, where SOL is used to pay transaction fees associated with running smart contracts.

The Solana Network publicly launched in March 2020 with an initial supply of 500,000,000 SOL. The SOL inflation rate was adopted by the SOL development community in February 2021 under a schedule set originally at 8% annually and would decrease 15% year-over-year until it reaches a long-term fixed inflation rate of 1.5% annually.

A Different Goal than Bitcoin and Ethereum

Although the Bitcoin Network, the Ethereum Network and the Solana Network are all decentralized blockchain networks, the founders of the Solana Network aimed to solve the scalability limitations of the Bitcoin Network and the Ethereum Network. At the time of Solana's creation, blockchain transaction speeds were roughly 3 and 8 transactions per second ("**TPS**"), respectively, on the Bitcoin Network and the Ethereum Network. The key to the Solana Network's scalability solution was believed to be PoH's cryptographic "Verifiable Delay Function" ("**VDF**"), which generates a timestamp for each transaction to help improve the latency of processing transactions in chronological order. The timestamp generated by the VDF is then incorporated into each block in the Solana Network, providing a verifiable and immutable record of the order in which transactions occur. Unlike the Bitcoin Network, which uses a Proof of Work ("**PoW"**) consensus mechanism, the Solana Network uses Proof of Stake ("**PoS"**) in combination with PoH. This design, in addition to other key features, has allowed the Solana Network to boast high transaction throughput at extremely low costs. The PoH mechanism is designed to be highly scalable and capable of processing thousands of TPS. Although the theoretical throughput of the Solana Network is estimated to handle up to 65,000 TPS, as of December 2024, the network is currently averaging roughly 3,000 – 4,000 TPS.

Functionally, the Solana Network is comparable to the Ethereum Network. It offers a programmable, open source blockchain with smart contract capabilities that allow developers to build decentralized applications for decentralized finance protocols and NFT projects (all as defined below).

In order to secure the Solana Network, operators known as validators, operate nodes on the network and stake their own, or SOL tokens delegated to them, in order to participate in the transaction validation process, which ultimately adds new blocks to the blockchain. Validators (and owners of SOL tokens who delegate them to a validator) are incentivized by receiving newly minted SOL as a reward. This process allows PoS blockchains, like the Solana Network, to be more energy efficient than PoW blockchains (i.e. Bitcoin) which require more computing power to prove work is being done to validate transactions.

Common Uses of the Solana Network

Smart Contracts

The Solana Network allows developers to program smart contracts, which can be described as peer-to-peer contract functionality. For example, a smart contract could be written to crowdsource within the network, such as when $100,000 of currency is added to the pool, it will be sent to the recipient; and if the $100,000 threshold is not met within a month, all currency will be sent back to the original holders of the currency. Smart contracts are referred to as "smart" because they can self-operate when specified conditions are met. The fact that these smart contracts can run on the blockchain is attractive, as they can operate in a transparent and conflict-free way, with reduced risk of fraud, censorship or interference.

Decentralized Applications

The Solana Network enables developers to program applications that run on the decentralized network, with such applications ranging from finance applications and games to market exchanges and social networks.

*Decentralized Finance ("**DeFi**")*

DeFi is a system of finance that uses protocols, digital assets, smart contracts and decentralized applications on the Solana Network to build a global, open alternative to traditional financial services, spanning from saving and loans to trading and insurance. Solana Network's general programmability allows for this sophisticated functionality and enables developers to build decentralized applications for financial services. The most popular types of DeFi applications include decentralized exchanges (e.g., peer-to-peer currency trading), lending platforms and prediction markets (i.e., betting on the outcome of future events) without third-party interference.

*Non-Fungible Tokens ("**NFTs**")*

NFTs are tokens created to represent a unique, indivisible, and verifiable digital ownership of an asset. Each NFT contains a permanent information tab recorded in its smart contract, akin to a certificate of authenticity. As NFTs are issued on the Solana Network or a decentralized, immutable ledger, creating counterfeits is nearly impossible and ownership rights are preserved and immutable once committed, common use cases for NFTs include digital collectible, artwork and in-game assets (such as rare accessories and skins) that can be traded on digital marketplaces.

The Manager and the Subadvisor believe that as more applications are built on the Solana Network, and the blockchain solidifies its position as the preferred blockchain for the next iteration of the internet as the base layer technology for smart contracts and decentralized applications, the value of SOL will increase.

Increased SOL Transactions

The use of SOL as a means of exchange through smart contracts and a basis for decentralized finance is increasing rapidly throughout the world, particularly in nations where faith in central bank-backed fiat currencies has been unstable, or where necessary banking infrastructure is lacking. The Solana Network makes it possible for users to conduct global transactions directly with each other to buy, sell and trade goods and services from their smartphone, 24 hours a day.

Supply of SOL

New supply of SOL is created through "staking rewards" issued to validators for successfully verifying and adding new transaction blocks to the Solana Network, and where applicable rewards issued to owners of SOL who delegate SOL to validators. As of the date of this prospectus, the current staking reward for SOL was ~7%, and the circulating supply was approximately 490 million SOL. To control the rate of new supply issuance, SOL started with an annual issuance of 8%, which will decrease by 15% year-over-year until it reaches a long term fixed rate of 1.5%.

SOL as a Cryptocurrency

Since its creation in 2020, the Solana Network has grown into one of the most actively-used blockchains in the world, and SOL has become the fifth-largest cryptocurrency by market capitalization at $114.2 billion (as of January 27, 2025).

Volatility and Market Correlation

The price of SOL is volatile and fluctuations have a direct impact on the NAV of the ETF. However, movements in the price of SOL in the past may not be a reliable indicator of future movements. Movements may be influenced by various factors, including supply and demand, geo-political uncertainties, macroeconomic concerns and speculative investor interest. Neither absolute returns nor volatility are indicators of a good investment. Instead, one must adjust absolute returns for the amount of volatility, or risk, to attain risk-adjusted returns. The most common measure of risk-adjusted returns is the Sharpe Ratio, which measures returns above the risk-free rate divided by the volatility of the asset. Assets with the highest Sharpe Ratio best compensate investors for the risk that they are taking. Although SOL has been extremely volatile historically, when its returns are adjusted to account for volatility, there are a number of historical periods where SOL has outperformed traditional assets on a risk adjusted basis. SOL is also uncorrelated across traditional investment asset classes.

Storage of SOL

SOL is stored in a "digital wallet" which exists in either "hot storage" or "cold storage". A "hot wallet" refers to SOL that is held in a wallet that is online and connected to the internet. A user is able to pay for certain goods and services by making withdrawals from his or her hot wallet. SOL stored in a hot wallet is easily accessible for payment of goods and services, however it is also at the greatest risk of unrecoverable theft in the event of an attack by a hacker or malware. A "cold wallet" refers to SOL that is held in a wallet that is offline and is not present on a web server or any other computer. Typical methods of cold storage include storing data on a USB and storing the USB in a safety deposit box or safe. By keeping the majority of one's SOL in cold storage, users are able to reduce the possibility of theft in the event of a security breach. The ETF's SOL is generally held in the Sub-Custodian's cold storage system, protected in accordance with the industry-leading protocols which are described under "Organization and Management Details of the ETF – Sub-Custodians". While under the sub-custodianship of the Sub-Custodians, the ETF's SOL is only held in "hot" storage on a temporary basis in order to facilitate deposits and redemptions.

Purchasing SOL for the ETF's Portfolio

The Manager expects that SOL will be purchased for the ETF from SOL trading platforms and OTC counterparties (each, a "**SOL Source**"). The Subadvisor will conduct due diligence on each proposed SOL Source prior to transacting with such SOL Source in order to confirm its reputation and stability, including by conducting research on the executive officers and significant shareholders of the SOL Source and the regulatory regime, if any, applicable to the SOL Source. The Subadvisor will also confirm that each SOL Source maintains appropriate KYC policies and procedures and will not transact with any person or entity that is on a list of designated persons or entities established and maintained under applicable AML regulations in the jurisdiction of the SOL Source. The Manager and the Subadvisor will continue to ensure that each SOL Source has its head office in a jurisdiction which is a member of the FATF or its global network of FATF-Style Regional Bodies.

The Subadvisor expects that the ETF's SOL Sources will include government regulated trading platforms and OTC counterparties approved by the Subadvisor.

Staking of SOL

The Solana Network uses a PoS consensus mechanism to achieve distributed consensus. The PoS mechanism relies on validator nodes to stake, a process for verifying transactions included in each new block. Validators are incentivized with SOL rewards in exchange for verifying transactions, as are owners of SOL tokens who delegate them to validators.

Staking SOL requires validators who engage in the active function of running validator software and equipment. Rewards are paid in SOL and are variable depending, primarily, on the total amount of SOL staked to the Solana Network. Validators participating in the Solana Network's PoS protocol (and owners of SOL tokens who delegate them to validators) risk the loss of their staked SOL in the event that such validators fail to comply with the rules of the Solana Network (a process called slashing). By engaging in Staking Arrangements, the ETF is exposed to such risk of losses caused by the validators to whom the ETF delegates SOL. See "Risk Factors – Risk Factors Relating to Staking Arrangements". The Subadvisor expects to engage in Staking Arrangements in order to earn rewards for the ETF, which rewards will, following the deduction of applicable fees, accrue to the ETF's NAV for the benefit of the ETF's Unitholders. In facilitating the ETF's Staking Arrangements, the Subadvisor will cause SOL held in the ETF's portfolio to be staked through one or more staking service providers facilitated by the Sub-Custodians that have experience acting as a validator. As both Sub-Custodians will hold SOL on behalf of the ETF, before a staking service provider is permitted to act as validator in respect of the ETF's SOL, the Manager and/or Subadvisor will conduct due diligence on such service provider. The Subadvisor intends to initially use staking service providers facilitated by the Sub-Custodians, which may include a staking service provider affiliated with the Subadvisor (which would result in the payment of fees by the ETF to such staking service provider affiliated with the Subadvisor). However, the Subadvisor or the Manager may in the future, at its discretion, engage an affiliate of the Manager to provide staking services to the ETF through such affiliate's proprietary staking software. Neither the Subadvisor nor the Manager will use an affiliate of the Manager as a staking service provider if the net commission rate charged to the ETF would be higher than what could be charged if an acceptable third-party staking service provider (including an affiliate of the Subadvisor) was used instead. In determining whether to use an affiliate of the Manager, the Subadvisor and the Manager will also consider all qualitative and quantitative factors including, but not limited to, the security of the validator and the staked SOL, the expected net staking yield of the validator, as well as the expected uptime of the validator in performing Staking Arrangements.

Staking Arrangements will generally occur as follows:

- the Subadvisor will direct the Sub-Custodians to stake a certain amount of SOL through delegation to a validator directly out of the cold wallet administered by the Sub-Custodians on behalf of the ETF;
- rewards, which will be paid in SOL subject to any bonding or lock-up period, may be earned in connection with the staking of SOL;
- the Sub-Custodians will be entitled to a fee in respect of the rewards and will pay a portion of such fee to any party acting as validator; and
- the rewards will be delivered to a custodial wallet of the ETF held with the Sub-Custodians, a portion of which will be paid to the Manager as a Staking Service Fee, with the balance to be reinvested in the ETF.

Although there is currently no minimum amount of the SOL of the ETF that may be staked, the ETF intends to stake a portion of its SOL from time to time and the Manager intends to adopt a measured approach to Staking Arrangements, taking into account the liquidity needs of the ETF, the novelty of the investment strategy, as well as any applicable regulatory requirements and approvals. The Manager intends to initially target staking up to 50% of the SOL held in the portfolio of the ETF.

INVESTMENT RESTRICTIONS

Subject to exemptive relief that has been obtained or will be obtained or has been applied for, the ETF is subject to certain investment restrictions and practices contained in Canadian securities legislation applicable to alternative mutual funds, including NI 81-102, which are designed in part to ensure that the investments of the ETF are diversified and relatively liquid and to ensure its proper administration. The investment restrictions and practices applicable to the ETF which are contained in Canadian securities legislation, including NI-81-102, may not be deviated from without an exemption from the Canadian securities regulatory authorities having jurisdiction over the ETF. See "Exemptions and Approvals".

Tax Related Investment Restrictions

The ETF will not make an investment or conduct any activity that would result in the ETF (i) failing to qualify as a "unit trust" or "mutual fund trust" within the meaning of the Tax Act or (ii) being subject to the tax for "SIFT trusts" for purposes of the Tax Act (and the Manager intends to take the position that the acquisition, holding or staking of SOL will not result in the ETF being subject to such tax). In addition, the ETF will not (i) make or hold any investment in property that would be "taxable Canadian property" (if the definition of such term in the Tax Act were read without reference to paragraph (b) thereof) if more than 10% of the ETF's property consisted of such property; (ii) invest in or hold (a) an "offshore investment fund property" (or an interest in a partnership that holds such property) which would require the ETF to include significant amounts in income pursuant to section 94.1 of the Tax Act, (b) an interest in a trust (or a partnership which holds such an interest) which would require the ETF to report significant amounts of income in connection with such interest pursuant to the rules in section 94.2 of the Tax Act, or (c) any interest in a non-resident trust other than an "exempt foreign trust" for the purposes of section 94 of the Tax Act (or a partnership which holds such an interest); or (iii) invest in any security that would be a "tax shelter investment" within the meaning of section 143.2 of the Tax Act.

In addition, the ETF may not enter into any arrangement (including the acquisition of securities for its portfolio) where the result is a "dividend rental arrangement" for the purposes of the Tax Act, and the ETF may not engage in securities lending that does not constitute a "securities lending arrangement" for purposes of the Tax Act.

FEES AND EXPENSES

Fees and Expenses Payable by the ETF

Management Fee

An annual management fee (the "**Management Fee**") of 0.40% of the NAV of each series of the ETF, calculated daily and payable monthly in arrears, plus applicable taxes, is paid to the Manager.

The Management Fee compensates the Manager for services it provides to the ETF including, without limitation and as applicable: investment advisory and portfolio management services, implementation of the ETF's investment strategy, negotiating contracts with certain third-party service providers, including, but not limited to, subadvisors, custodians, sub-custodians, registrars, transfer agents, auditors and printers; authorizing the payment of operating expenses incurred on behalf of the ETF; maintaining certain accounting and financial records; calculating the amount and determining the frequency of distributions, if any, by the ETF; ensuring that Unitholders are provided with financial statements and other reports as are required from time to time by applicable law; ensuring that the ETF complies with all other regulatory requirements including continuous disclosure obligations under applicable securities laws; administering purchases, redemptions and other transactions in Units; and arranging for any payments required upon termination of the ETF.

The Subadvisor of the ETF is remunerated by the Manager out of the Management Fee.

Staking Service Fee

In addition to the Management Fee, the Manager is entitled to receive a fee equal to a portion of the staking rewards generated for the ETF by Staking Arrangements (net of the fees payable to the validator) such that no less than 65% of the rewards accrue to the ETF and up to 35% of the rewards accrue to the Manager. The Staking Service Fee will be calculated daily and paid monthly, in arrears, plus applicable taxes, and is intended to compensate the Manager for the additional work required to administer Staking Arrangements for the ETF. The Staking Service Fee charged by the Manager will only be deducted from any rewards generated by Staking Arrangements which will generate income to the ETF.

Management Fee Distributions

To encourage very large investments in the ETF, and to ensure the Management Fee is competitive for these investments, the Manager may, at its discretion, agree to charge a reduced fee as compared to the fee it otherwise would be entitled to receive from the ETF with respect to investments in the ETF by Unitholders that hold, on average during any period specified by the Manager from time to time, Units of the ETF having a specified aggregate value. Such a reduction will be dependent upon a number of factors, including the amount invested, the total assets of the ETF under administration and the expected amount of account activity. An amount equal to the difference between the fee otherwise chargeable and the reduced fee will be distributed by the ETF, at the discretion of the Manager, to those Unitholders as management fee distributions (generally representing an amount equal to the difference between the Management Fee otherwise chargeable by the Manager and a reduced fee determined by the Manager, at its discretion, from time to time, a "**Management Fee Distribution**").

The availability and amount of Management Fee Distributions with respect to Units of the ETF will be determined by the Manager. Management Fee Distributions for the ETF will generally be calculated and applied based on a Unitholder's average holdings of Units of the ETF over each applicable period as specified by the Manager from time to time. Management Fee Distributions will be available only to beneficial owners of Units and not to the holdings of Units by dealers, brokers or other participants in CDS that hold Units of the ETF on behalf of beneficial owners ("**CDS Participants**"). Management Fee Distributions will be paid first out of net income of the ETF then out of capital gains of the ETF and thereafter out of capital. In order to receive a Management Fee Distribution for any applicable period, a beneficial owner of Units must submit a claim for a Management Fee Distribution that is verified by a CDS Participant on the beneficial owner's behalf and provide the Manager with such further information as the Manager may require in accordance with the terms and procedures established by the Manager from time to time.

The Manager reserves the right to discontinue or change Management Fee Distributions at any time. The tax consequences of Management Fee Distributions made by the ETF generally will be borne by the Unitholders of the ETF receiving these distributions from the Manager.

Operating Expenses

In addition to the Management Fee, the ETF pays for all ordinary expenses incurred in connection with its operation and administration. Unless otherwise waived or reimbursed by the Manager, and subject to compliance with NI 81-102, the expenses for the ETF include, as applicable, without limitation: all costs and expenses associated with the execution of transactions in respect of the ETF's investment in SOL and the ETF's Staking Arrangements; audit fees; fees payable to third-party service providers; trustee and custodial expenses including fees payable to Cidel Custodian and the Sub-Custodians, as applicable; valuation, accounting and record keeping costs; legal expenses; prospectus preparation and filing expenses; costs associated with delivering documents to Unitholders; listing fees and expenses and other administrative expenses and costs incurred in connection with the continuous public filing requirements; costs and expenses of preparing financial and other reports, costs and expenses arising as a result of complying with all applicable laws, regulations and policies; Depositary fees; bank related fees and interest charges;

extraordinary expenses; reports to Unitholders and servicing costs; registrar and transfer agent fees; fees and expenses of the members of the IRC; expenses related to compliance with NI 81-107; fees and expenses relating to the voting of proxies by a third party; premiums for directors' and officers' insurance coverage for the members of the IRC; income taxes; all applicable sales taxes; brokerage expenses and commissions; and withholding taxes. Such expenses also include expenses of any action, suit or other proceedings in which or in relation to which, the Manager, the Subadvisor, Cidel Custodian or Sub-Custodians, the IRC or any of their respective officers, directors, employees, consultants or agents are entitled to, as indemnified by the ETF.

Expenses of the Issue

All expenses related to the issuance of Units are borne by the ETF unless otherwise waived or reimbursed by the Manager.

Fees and Expenses Payable Directly by the Unitholders

Redemption Fee

This fee, which is payable to the ETF, does not apply to Unitholders who buy and sell their Units through the facilities of the TSX.

An amount as may be agreed to between the Manager and the Designated Broker or a Dealer of the ETF may be charged by the Manager at its discretion, on behalf of the ETF, to the Designated Broker and/or Dealers to offset certain transaction costs including brokerage expenses, commissions and other costs and expenses associated with the issue, exchange or redemption of Units of the ETF to or by such Designated Broker and/or Dealer. The current redemption fee of the ETF is available upon request. Please see "Redemption and Exchange of Units".

RISK FACTORS

There are many risks associated with an investment in the Units. In addition to the considerations set out elsewhere in this prospectus, purchasers should consider the following risk factors before investing in Units:

Risk Factors Relating to SOL

Speculative Nature of SOL

Investing in SOL is speculative, prices are volatile, and market movements are difficult to predict. Supply and demand for SOL can change rapidly and is affected by a variety of factors, including regulation and general economic trends.

Unforeseeable Risks

The Solana Network and SOL were only recently launched and, as a result, there is little data on its long-term investment potential. Additionally, due to the rapidly evolving nature of the digital asset market, including advancements in the underlying technology, changes to SOL may expose investors in the ETF to additional risks which are impossible to predict as of the date of this prospectus. This uncertainty makes an investment in the Units very risky.

Access Loss or Theft

There is a risk that some or all of the ETF's holdings of SOL could be lost, stolen, destroyed or inaccessible, potentially by the loss or theft of the private keys held by the ETF's Sub-Custodians associated with the public addresses that hold the ETF's SOL and/or destruction of storage hardware. Multiple thefts of SOL and other digital assets from other holders have occurred in the past. Because of the decentralized process for transferring SOL, thefts can be difficult to trace, which may make SOL particularly attractive targets for theft. Even though the ETF will adopt security procedures intended to protect its assets, there can be no assurance that those procedures will be successful in preventing such loss, theft or restriction on access. You should not invest unless you understand the risk that the ETF may lose possession or control of its assets. Access to SOL held by the ETF could be restricted by natural events (such as an earthquake or flood) or human actions (such as a terrorist attack). SOL held in custody accounts of the ETF will likely be an appealing target for hackers or malware distributors seeking to destroy, damage or steal SOL or private keys of the ETF.

Security breaches, cyber-attacks, computer malware and computer hacking attacks have been a prevalent concern for the digital asset trading platforms on which SOL trade. Any cyber security breach caused by hacking, which involves efforts to gain unauthorized access to information or systems, or to cause intentional malfunctions or loss or corruption of data, software, hardware or other computer equipment, and the inadvertent transmission of computer viruses, could harm the ETF's business operations or reputation, resulting in loss of the ETF's assets. Digital asset trading platforms may in particular be at risk of cyber security breaches orchestrated or funded by state actors. For example, it has been reported that South Korean digital asset trading platforms have been subject to cybersecurity attacks by North Korean state actors with the intent of stealing digital assets possibly with the intention of evading international economic sanctions. Any problems relating to the performance and effectiveness of security procedures used by the ETF and a Sub-Custodian to protect the ETF's SOL, such as algorithms, codes, passwords, multiple signature systems, encryption and telephone call-backs, will have an adverse impact on the NAV of the ETF and an investment in the Units. Furthermore, if and as the ETF's holdings of SOL grow, the ETF and a Sub-Custodian may become a more appealing target for cyber security threats such as hackers and malware. Moreover, cybersecurity attacks orchestrated or funded by state actors may be particularly difficult to defend against because of the resources that state actors have at their disposal.

No storage system is impenetrable, and storage systems employed by the ETF and a Sub-Custodian may not be free from defect or immune to force majeure events. Any loss due to a security breach, software defect or force majeure event generally will be borne by the ETF, which will adversely affect the value of the Units.

Such storage systems and operational infrastructure may be breached due to the actions of outside parties, error or insider malfeasance of an employee of the Manager, the Subadvisor or Cidel Custodian, or otherwise, and, as a result, an unauthorized party may obtain access to the storage systems, private keys, data or SOL of the Manager, the Subadvisor, a Sub-Custodian or the ETF. Additionally, outside parties may attempt to fraudulently induce employees of the Manager, Cidel Custodian, the Sub-Custodians, or the Subadvisor to disclose sensitive information in order to gain access to the infrastructure of the ETF. The Manager, the Subadvisor, Cidel Custodian, the Sub-Custodians or any technological consultant engaged by them may periodically examine and propose modifications to storage systems, protocols and internal controls to address the use of new devices and technologies to safeguard the ETF's systems and SOL of the ETF. As the techniques used to obtain unauthorized access, disable or degrade service, or sabotage systems change frequently, or may be designed to remain dormant until a predetermined event and often are not recognized until launched against a target, the Manager or the Subadvisor may be unable to anticipate these techniques or implement adequate preventative measures. If an actual or perceived breach of a storage system occurs, a loss of confidence in the Solana Network may decrease the market price of the investments of the ETF. An actual or perceived breach may also cause Unitholders to seek redemption of or sell their Units, which may harm the investment performance of the ETF.

If the ETF's holdings of SOL are lost, stolen or destroyed under circumstances rendering a party liable to the ETF, the responsible party may not have the financial resources sufficient to satisfy the ETF's claim. For example, as to a particular event of loss, the only source of recovery for the ETF may be limited to the relevant custodian or, to the extent identifiable, other responsible third parties (for example, a thief or terrorist), any of which may not have the financial resources (including liability insurance coverage) to satisfy a valid claim of the ETF. Similarly, as noted below, Cidel Custodian and the Sub-Custodians have limited liability to the ETF, which will adversely affect the ability of the ETF to seek recovery from them, even when they are at fault.

SOL and Digital Asset Investment Risks

The further development and acceptance of SOL is subject to a variety of factors that are difficult to evaluate. The slowing or stopping of the development or acceptance of SOL may adversely affect the NAV of the ETF and an investment in the Units.

The Solana Network and its related token, SOL, publicly launched in 2020 and, compared with other more established cryptographic protocols and digital assets, are still relatively new. The use of SOL to, among other things, buy and sell goods and services is part of the new, experimental and rapidly evolving cryptocurrency industry. SOL has increased in popularity and market value since its inception, however it is not as established or widely accepted as Bitcoin, Ethereum or other digital assets. The growth of the cryptocurrency industry, as well as SOL's market share, is subject to a high degree of uncertainty. The factors affecting SOL's further growth and development include, but are not limited to:

- continued worldwide growth in the adoption and use of SOL;
- government and quasi-government regulation of SOL and its use, or restrictions on or regulation of access to and operation of the Solana Network;
- changes in consumer demographics, demand and preferences;
- maintenance and development of the open-source software protocol of the Solana Network;
- availability and popularity of other forms or methods of buying and selling goods and services, including other cryptocurrencies and new means of using fiat currencies;
- further development of additional applications and scaling solutions; and
- general economic conditions and the regulatory environment relating to SOL and other cryptocurrencies; and negative consumer or public perception of SOL or cryptocurrencies generally.

SOL is loosely regulated and there is no central marketplace for SOL. Supply is determined by a computer code, not by a central bank, and prices can be extremely volatile. Additionally, digital asset trading platforms may suffer from operational issues, such as delayed execution, that could have an adverse effect on the ETF. Some digital asset trading platforms have been closed due to fraud, failure or security breaches.

Several factors may affect the price of SOL, including, but not limited to the adoption of the Solana Network by software developers and market participants, the number and quality of smart contract applications that are supported by the Solana Network, supply and demand, investors' expectations with respect to the rate of inflation, interest rates, currency exchange rates or future regulatory measures (if any) that restrict the trading of SOL or the use of SOL as a form of payment. There is no assurance that SOL will maintain its long-term value in terms of purchasing power in the future, or that mainstream retail merchants will accept SOL as a form of payment.

SOL is created, issued, transmitted, and stored according to protocols run by computers in the Solana Network. It is possible SOL's protocol has undiscovered flaws which could result in the loss of some or all of the assets held by the ETF.

PoH is a new blockchain technology created in connection with the Solana Network. PoH is not widely used, and as such may be more susceptible to undiscovered flaws than more broadly adopted technologies. In the future, there may be network-scale attacks against the Solana Network protocol, which could result in the loss of some or all of the SOL held by the ETF. At its current early stage of development and adoption, the Solana Network may be particularly susceptible to such network-scale attacks. On September 14, 2021, the Solana Network was offline for an extended period of time due to what was later attributed to a type of denial of service attack. Any similar attacks could have a material adverse effect on the value of SOL held by the ETF. Advancements in quantum computing could break SOL's cryptographic rules. The Manager and Subadvisor make no guarantees about the reliability of the cryptography used to create, issue, or transmit SOL held by the ETF.

Short History Risk

SOL is a new technological innovation with a limited history. Due to this short history, it is not clear how all elements of SOL will unfold over time, specifically with regard to governance between validators, developers and users, as well as the long-term security model as the rate of inflation of SOL decreases. There is no assurance that usage of SOL and its blockchain will continue to grow. A contraction in the use of SOL or its blockchain may result in increased volatility or a reduction in the price of SOL which could have a material adverse effect on the NAV of the ETF and an investment in the Units.

Risks Related to the Pricing Source

The SOL held by the ETF are valued, including for purposes of determining the NAV of the ETF, based upon the ETF's reference index, the Bloomberg Galaxy Solana Index. The Solana Index is calculated using DAR as its primary input. DAR is a pricing algorithm using a time-weighted average price derived from eligible, non-outlier trades that occur within a 30-minute window prior to a specified close time.

As the Solana Index is calculated as an average of those pricing sources selected by Bloomberg Index Services Limited, it will not necessarily be reflective of the price of SOL available on any given digital asset trading platform or other venue where the trades of the ETF are executed. In addition, the Solana Index is available once per day, whereas SOL trades 24 hours a day. As such, the Solana Index may not be reflective of market events and other developments that occur after its pricing window and thus the Solana Index may not be reflective of the then-available market price of SOL in periods between its calculations. The Manager does not intend, and disclaims any obligation, to determine whether the Solana Index reflects the realizable market value of SOL or the price at which market transactions in SOL could be readily affected at any given time.

Because the NAV of the ETF is based almost entirely on the value of the ETF's SOL portfolio as determined by reference to the Solana Index, and redemptions and subscriptions are valued based on the NAV per Unit, if the Solana Index does not reflect the realizable market value of SOL, at a given time, redemption or subscriptions may be effected at prices that may adversely affect the Unitholders and the ETF.

Volatility

The SOL's values have historically been highly volatile. The market for SOL is sensitive to new developments, and since volumes are still maturing, any significant changes in market sentiment (by way of sensationalism in the media or otherwise) can induce large swings in volume and subsequent price changes.

At the beginning of 2021, SOL traded at $1.84, and as of November 1, 2021, SOL traded at $205.92, reflecting an 11,100% increase in value from the beginning of the year. While overall SOL has increased in value, there were numerous instances over the course of 2021 in which SOL either increased or decreased in value by more than 30% in the span of several days. Between the period from November 1, 2021 to December 31, 2022, SOL saw a decrease in price from $203.60 to $9.96. Then from September 30, 2023 to January 25, 2025, SOL saw an increase in price from $21.39 to $256.07. Given the price volatility of digital assets more generally, including more established digital assets such as Bitcoin and Ethereum with higher trading volume, more diversified ownership and more supply in circulation, the Manager expects that the price of SOL will continue to be highly volatile. Extreme volatility in the future, including any rapid declines in the trading prices of SOL in future periods, including to zero, could have a material adverse effect on an investment in the ETF. The ETF is not actively managed and will not take any actions to take advantage, or mitigate the impacts, of volatility in the price of SOL.

Settlement of Transactions on the Solana Network

There is no central clearing house for cash-to-SOL transactions. Current practice is for the purchaser of SOL to send fiat currency to a bank account designated by the seller, and for the seller to broadcast the transfer of SOL to the purchaser's public SOL address upon receipt of the cash. The purchaser and seller monitor the transfer with a transaction identification number that is available immediately upon transfer and is expected to be included in the next block confirmation. When the ETF purchases SOL from a SOL Source, there is a risk that SOL Source will not initiate the transfer on the Solana Network upon receipt of cash from the ETF, or that the bank where the SOL Source's account is located will not credit the incoming cash from the ETF for the account of the SOL Source. The ETF seeks to mitigate this risk by transacting with regulated SOL Sources that have undergone due diligence and by confirming the solvency of the SOL Source and the bank designated by each SOL Source based on publicly available information.

Momentum Pricing

The market value of the Units may be affected by momentum pricing of SOL due to speculation about future price appreciation. Momentum pricing typically is associated with growth stocks and other assets whose valuation, as determined by the investing public, is impacted by anticipated future appreciation in value. Momentum pricing may result in speculation regarding future appreciation in the value of digital assets, which inflates prices and may lead to increased volatility.

Limited Use

Use of SOL as a means of payment for goods and services remains limited. Price volatility undermines SOL's utility as a medium of exchange and its use as a medium of exchange and payment method may always be low. A lack of continued growth as a medium of exchange and payment method, or a contraction of such use, as well as a lack of adoption of the Solana Network, may result in increased volatility or a reduction in the value of SOL, either of which could adversely impact the NAV of the ETF and an investment in the Units. There can be no assurance that such acceptance will grow, or not decline, in the future.

Scaling Obstacles

Many digital asset networks face significant scaling challenges. As the use of digital asset networks increases without a corresponding increase in throughput of the networks, average fees and settlement times can increase significantly. While the Solana Network has a larger theoretical throughput (meaning it has the potential to handle more TPS) than the Ethereum Network and many other cryptocurrency networks, the Solana Network has and may continue to experience certain issues in practice. For example, the cost of building and operating validators on the Solana Network, the computers that process transactions and participate in PoS consensus, is very high. The declining inflation rates for validation set by the Solana Network could pose a disincentive for validators to join the network. If there are a suboptimal number of validators on the Solana Network, or if the validators on the network are not sufficiently powerful to handle the Solana Network's activity, a slowdown or instability of the Solana Network may occur. There have been previous incidents of slowdown or instability, and there can be no assurance that the Solana Network will operate effectively or reach its theoretical capabilities. For example, while the maximum theoretical throughput of the Solana Network is estimated at 65,000 TPS, the September 2021 denial of service attack caused the Solana Network to crash with the blockchain seeking to handle 400,000 TPS. In May 2022, there was a surge in demand for block space on the Solana Network, causing a seven-hour outage due to a significant rush of bots using a non-fungible token minting tool called Candy Machine. The demand surge required 4 million TPS. These issues in turn could have a material adverse effect on the price of SOL and an investment in the ETF.

Increased fees and decreased settlement speeds could preclude certain use cases for SOL and could reduce demand for and the prices of SOL, which could adversely impact the NAV of the ETF and an investment in the Units.

There is no guarantee that any of the mechanisms in place or being explored for increasing the scale of settlement of transactions in SOL will be effective, or how long these mechanisms will take to become effective, which could adversely impact the NAV of the ETF and an investment in the Units.

Private Keys

SOL's private keys are stored in two different forms: "hot wallet" storage, whereby the private keys are connected to the internet; and "cold" storage, where private keys are stored completely offline. The SOL held by a Sub-Custodian is generally stored offline in cold storage only, except for the SOL held in hot storage on a temporary basis to facilitate portfolio transactions, or deposits and redemptions. Private keys for SOL held by the ETF must be safeguarded and kept private in order to prevent a third party from accessing the SOL while held in such wallet. To the extent a private key is lost, destroyed or otherwise compromised and no backup of the private key is accessible, the ETF will be unable to access, and will effectively lose SOL held in the related digital wallet. Any loss of private keys by a Sub-Custodian relating to digital wallets used to store the SOL of the ETF would adversely affect the NAV of the ETF and an investment in the Units.

Irrevocable Nature of Blockchain-Recorded Transactions

SOL transactions recorded on the blockchain are not, from an administrative perspective, reversible without the consent and active participation of the recipient of the transaction or, in theory, control or consent of a majority of the Solana Network's aggregate hashrate. Once a transaction has been verified and recorded in a block that is added to the blockchain, an incorrect transfer of SOL or a theft of SOL generally will not be reversible, and the ETF may not be capable of seeking compensation for any such transfer or theft. It is possible that, through computer or human error, or through theft or criminal action, SOL could be transferred from custody accounts in incorrect quantities or to unauthorized third parties. To the extent that the Manager or the Subadvisor is unable to seek a corrective transaction with such third party or is incapable of identifying the third party that has received SOL through error or theft, the ETF will be unable to revert or otherwise recover incorrectly transferred SOL. To the extent that the ETF is unable to seek redress for such error or theft, such loss could adversely affect the NAV of the ETF and an investment in the Units.

Internet Disruptions

A significant disruption in internet connectivity could disrupt the Solana Network's operations until the disruption is resolved, and such disruption could have an adverse effect on the price of SOL. In particular, some digital assets have experienced a number of denial-of-service attacks, which have led to temporary delays in block creation and digital asset transfers. While in certain cases in response to an attack, an additional "hard fork" has been introduced to increase the cost of certain Solana Network functions, the Solana Network has continued to be the subject of additional attacks. Moreover, it is possible that as SOL increases in value, it may become a bigger target for hackers and subject to more frequent hacking and denial-of-service attacks.

Gateway Protocol Hijackings

Digital assets are also susceptible to Border Gateway Protocol hijacking ("**BGP hijacking**"). Such an attack can be a very effective way for an attacker to intercept traffic en route to a legitimate destination. BGP hijacking impacts the way different nodes and validators are connected to one another to isolate portions of them from the remainder of the network, which could lead to a risk of the network allowing double-spending and other security issues. If BGP hijacking occurs on the Solana Network, participants may lose faith in the security of SOL, which could affect SOL's value and consequently the value of an investment in the Units.

Any future attacks that impact the ability to transfer SOL could have a material adverse effect on the price of SOL and the value of an investment in the Units.

Malicious Attacks on the Solana Network

If a malicious actor or botnet (a volunteer or hacked collection of computers controlled by networked software coordinating the actions of the computers) obtains control of more than 50% of the validating power on the Solana Network, such actor or botnet may be able to alter the Solana Network on which transactions in SOL rely by constructing fraudulent blocks or preventing certain transactions from completing in a timely manner, or at all. The malicious actor or botnet could also control, exclude or modify the ordering of transactions. Although the malicious actor or botnet would not be able to generate new tokens or transactions using such control, it could "double-spend" its own tokens (i.e., spend the same tokens in more than one transaction) and prevent the confirmation of other users' transactions for so long as it maintained control. To the extent that such malicious actor or botnet did not yield its control of the processing power on the Solana Network or the SOL community did not reject the fraudulent blocks as malicious, reversing any changes made to the Solana Network may not be possible. Further, a malicious actor or botnet could create a flood of transactions in order to slow down the Solana Network.

Although there are no known reports of control of the Solana Network, if groups of coordinating or connected SOL holders together have more than 50% of outstanding SOL, which if staked and if the users run validators, this could permit them to exert authority over the validation of SOL transactions. This risk is heightened if over 50% of the validating stake on the network falls within the jurisdiction of a single governmental authority. If network participants, including the core developers and the administrators of validating pools, do not act to ensure greater decentralization of SOL, the feasibility of a malicious actor obtaining control of the validating power on the Solana Network will increase, which may adversely affect the NAV per Unit and an investment in the Units.

Control of Validator Network

Transactions on the Solana Network are validated by a proof-of-stake ("**PoS**") consensus mechanism, whereby transactions on the network are validated by validators that have "staked", or deposited, SOL through a smart contract in order to be accepted as validators on the network. Unlike proof-of-work ("**PoW**") consensus mechanisms, whereby control of a blockchain network is dictated by controlling a majority of the aggregate computing power devoted to mining additional blocks in the public chain, blockchain networks that rely on PoS consensus mechanisms are ultimately controlled by a pool of validators that have staked their cryptocurrency on the blockchain network for which they are responsible for validating transactions on the network. If a malicious actor or botnet (i.e. a volunteer or hacked collection of computers controlled by networked software coordinating the actions of the computers) obtains control over a supermajority (66 2/3%) of the staked SOL validator pool, it may be able to construct fraudulent blocks or prevent certain transactions from completing, either in a timely manner or at all. The malicious actor or botnet could control, exclude or modify the ordering of transactions. While a malicious actor would not be able to generate new SOL interests or transactions using such control, it could "double-spend" its own tokens (i.e., spend the same interests in more than one transaction) and prevent the confirmation of other users' transactions for so long as it maintained control. To the extent that such malicious actor or botnet did not yield its control of the validator pool on the Solana Network or the network community did not reject the fraudulent blocks as malicious, reversing any changes made to the blockchain may not be possible. Further, a malicious actor or botnet could create a flood of transactions in order to slow down confirmations of transactions on the Solana Network.

While blockchain networks that rely on PoS consensus mechanism are theoretically safer from a "majority attack" described above than blockchain networks that rely on PoW consensus mechanisms—since an attacker would need to gain control of the actual staked cryptocurrency assets instead of the computing power devoted to mining additional cryptocurrency assets—the risk of a majority attack remains. Less diversified PoS blockchain networks, like the Solana Network, may be more susceptible to such attacks than more diversified PoS blockchain networks like Ethereum 2.0, since the Solana Network currently has a small number of validation nodes than certain other networks and a more limited amount of staked cryptocurrency that would need to be controlled in order to successfully stage a majority attack. To the extent that the Solana ecosystem, including the core developers and validators, does not act to ensure greater decentralization of validation nodes, the feasibility of a malicious actor obtaining control of the processing power on the Solana Network could increase, which may adversely affect an investment in the ETF.

Control of Developers

A malicious actor may also obtain control over the Solana Network through its influence over core or influential developers. For example, this could allow the malicious actor to block legitimate network development efforts or attempt to introduce malicious code to a network under the guise of a software improvement proposal by such a developer. Any actual or perceived harm to the Solana Network as a result of such an attack could result in a loss of confidence in the source code or cryptography underlying the Solana Network, which could negatively impact the demand for SOL and therefore adversely affect the NAV of the ETF and an investment in the Units.

Faulty Code

In the past, flaws in the source code for digital assets have been exposed and exploited, including those that exposed users' personal information and/or resulted in the theft of users' digital assets. Defects in the Solana Network have been publicly found and have caused network outages resulting in the devaluation of SOL. For instance, in September 2021, the GRAPE protocol launched a token offering on the Solana Network; the high volume of transactions initiated by automated trading bots participating in the token offering created a denial of service attack on the network and thereby exposed a defect in the programming of the Solana Network, which caused the network to crash. While the Solana Network was only offline for 17 hours and did not result in the theft or loss of any digital assets, the price of SOL dropped 35% over the course of the week following the network outage. On April 30, 2022, a surge of trading bots minting NFTs through a tool called Candy Machine required 4 million TPS, crashing the nodes for a seven-hour network outage.

Discovery of flaws in, or exploitations of, the source code that allow malicious actors to take or create money in contravention of known network rules have occurred. In addition, the cryptography underlying SOL could prove to be flawed or ineffective, or developments in mathematics and/or technology, including advances in digital computing, algebraic geometry and quantum computing, could result in such cryptography becoming ineffective. In any of these circumstances, a malicious actor may be able to steal SOL held by the ETF, which would adversely affect an investment in their Units. Even if the affected digital asset is not SOL held by the ETF, any reduction in confidence in the source code or cryptography underlying digital assets generally could negatively impact the demand for SOL in general and therefore, adversely affect the NAV of the ETF and an investment in the Units.

Proof of History (PoH) Risks

The Solana Network uses a novel technology known as "Proof of History" or PoH, which is designed to allow transactions on the Solana Network to be timestamped and more quickly verified by providing a cryptographically safe source of time throughout the network, reducing the consensus overhead. While PoH, by facilitating rapid verification of transactions, represents a key component of the Solana Network's value proposition, the technology is relatively new and untested compared to more widely utilized technologies. As such, there may be an increased chance of undiscovered issues with respect to the PoH protocol, which in turn could have an adverse effect on the Solana Network, the price of SOL and an investment in the ETF.

Network Development and Support

The Solana Network will operate based on open-source protocol maintained by a group of core developers. As the Solana Network protocol is not sold and its use does not generate revenues for development teams, core developers may not be directly compensated for maintaining and updating the Solana Network protocol. Consequently, developers may lack a financial incentive to maintain or develop the Network, and the core developers may lack the resources to adequately address emerging issues with the network. There can be no guarantee that developer support will continue or be sufficient in the future. Additionally, some development and developers are funded by companies whose interests may be at odds with other participants in the Solana Network or with the ETF. To the extent that material issues arise with the Solana Network protocols and the core developers and open-source contributors are unable or unwilling to address the issues adequately or in a timely manner, the Solana Network, the NAV of the ETF and an investment in the Units may be adversely affected.

Network Governance

The infrastructure of the Solana Network is managed as an open-source project that is maintained by the Solana Network's user base without any need for intermediaries. Governance of decentralized networks, such as the Solana Network, is achieved through voluntary consensus and open competition. In other words, SOL has no central decision-making body or clear manner in which participants can come to an agreement other than through overwhelming consensus. The lack of clarity on governance may adversely affect the SOL's utility and ability to grow and face challenges, both of which may require solutions and directed effort to overcome problems, especially long-term problems.

Should a lack of clarity in the Solana Network's governance slow the Solana Network's development and growth, the NAV of the ETF and the value of the Units may be adversely affected.

Network Forks

The Solana Network's software is open source, meaning that any user can download the software, modify it and then propose that the users and validators of SOL adopt the modification. When a modification is introduced and a substantial majority of users and validators consent to the modification, the change is implemented and the Solana Network remains uninterrupted. However, if less than a substantial majority of users and validators consent to the proposed modification, and the modification is not compatible with the software prior to its modification, the result is a so-called "fork" of the Solana Network. In other words, two incompatible networks would then exist: (1) one network running the pre-modified software and (2) another network running the modified software. The effect of such a fork would be the existence of two versions of SOL running in parallel, yet lacking interchangeability.

Forks occur for a variety of reasons and have occurred with SOL as well as other cryptocurrencies. First, forks may occur after a significant security breach. For example, in 2016, a smart contract using the Ethereum Network was hacked by an anonymous hacker, who syphoned approximately $50 million worth of Ethereum held by the DAO, a distributed autonomous organization, into a segregated account. As a result of this event, most participants in the Ethereum ecosystem elected to adopt a proposed fork designed to effectively reverse the hack. However, a minority of users continued to develop the old blockchain, now referred to as "Ethereum Classic", with the digital asset on that blockchain now referred to as "classic Ethereum" or "ETC". Classic Ethereum remains traded on several digital asset exchanges.

Second, forks could be introduced by an unintentional, unanticipated software flaw in the multiple versions of otherwise compatible software users run. Such a fork could adversely affect the digital asset's viability. It is possible, however, that a substantial number of users and validators could adopt an incompatible version of the digital asset while resisting community-led efforts to merge the two chains. This would result in a permanent fork, as in the case of Ethereum and ETC, as detailed above. If a permanent fork were to occur, then the ETF could hold amounts of SOL and the new alternative. As described below, the ETF is permitted to hold SOL, the new alternative, or both, based on the Manager's sole discretion as to whether the new alternative is an appropriate medium for investment.

Third, forks may occur as a result of disagreement among network participants as to whether a proposed modification to the network should be accepted. For example, in July 2017, Bitcoin "forked" into Bitcoin and a new digital asset, Bitcoin Cash, as a result of a several-year dispute over how to increase the rate of transactions that the Bitcoin Network can process. Since then, Bitcoin has been forked several times to launch new digital assets, such as Bitcoin Gold, Bitcoin Silver and Bitcoin Diamond.

Furthermore, certain forks can introduce new security risks. For example, when Ethereum and Classic Ethereum split in 2016, "replay attacks" (i.e., attacks in which transactions from one network were rebroadcast to nefarious effect on the other network) plagued digital asset platforms for a period of at least a few months.

Another possible result of a hard fork is an inherent decrease in the level of security. After a hard fork, it may become easier for an individual or group of individuals to gain control of the validatory pool necessary to exert control over an entire PoS network, thereby making digital assets that rely on proof of stake more susceptible to attack. See "Malicious Attacks on the Solana Network".

If SOL were to fork into two digital assets, the ETF would be expected to hold an equivalent amount of SOL and new asset following the hard fork. However, the ETF may not be able, or it may not be practical, to secure or realize the economic benefit of the new asset for various reasons. For instance, Cidel Custodian, the Sub-Custodians or a security service provider of the ETF may not agree to provide the ETF access to the new asset. In addition, the ETF may determine that there is no safe or practical way to custody the new asset, or that trying to do so may pose an unacceptable risk to the ETF's holdings in SOL, or that the costs of taking possession and/or maintaining ownership of the new digital asset exceed the benefits of owning the new digital asset.

The timing of any such occurrence is uncertain, and the Manager and the Subadvisor have sole discretion whether to claim a new asset created through a fork of the Solana Network, subject to certain restrictions that may be put in place by the ETF's service providers.

Forks in the Solana Network could adversely affect the NAV of the ETF and an investment in the Units or the ability of the ETF to operate. Additionally, laws, regulations or other factors may prevent the ETF from benefitting from the new asset even if there is a safe and practical way to custody and secure the new asset. For example, it may be illegal for the ETF to sell the new asset, or there may not be a suitable market into which the ETF can sell the new asset (either immediately after the fork or ever).

Air Drops

SOL may become subject to an occurrence similar to a fork, which is known as an "**air drop**". In an air drop, the promoters of a new digital asset announce to holders of another digital asset that they will be entitled to claim a certain amount of the new digital asset for free. For the same reasons as described above with respect to hard forks, the ETF may or may not choose, or be able, to participate in an air drop, or may or may not be able to realize the economic benefits of holding the new digital asset. The timing of any such occurrence is uncertain, and the Manager has sole discretion whether to claim a new asset created through an airdrop.

Intellectual Property

Code underlying the Solana Network is available under open source licenses and as such the code is generally open to use by the public. Nonetheless, other third parties may assert intellectual property claims relating to the holding and transfer of SOL and its source code. Regardless of the merit of any intellectual property or other legal action, any threatened action that reduces confidence in long-term viability or the ability of end-users to hold and transfer SOL may adversely affect the NAV of SOL and an investment in the Units. Additionally, a meritorious intellectual property claim could prevent the ETF and other end-users from accessing, holding, or transferring SOL, which could force the liquidation of the ETF's holdings of SOL (if such liquidation is possible). As a result, an intellectual property claim against the ETF or other large Solana Network participants could adversely affect the NAV of the ETF and an investment in the Units.

Validator Incentives

Validators are rewarded for staking their SOL on the Solana Network by earning a reward return on their staked SOL based on the current SOL inflation rate, total number of SOL staked on the network, and an individual validator's performance and commission. The SOL inflation rate is determined by an inflation schedule that was adopted by the Solana development community in February 2021—under this inflation schedule, SOL inflation is currently 4.758% annually and will decrease 15% year-over-year until it reaches a long-term fixed inflation rate of 1.5% annually. As SOL inflation decreases, and as more SOL is staked on the Solana Network, the reward that each individual validator will receive for verifying transactions will decrease over time. If the aggregate revenue from validating transactions is not sufficient to support a validator's operating costs, the validator may cease operations. Validators ceasing operations would reduce the efficiency and quality of transaction validation on the network and make the Solana Network more vulnerable to a malicious actor or botnet obtaining sufficient control to manipulate the blockchain and hinder transactions. Any reduction in confidence in the confirmation process of the Solana Network may adversely affect the price of SOL and an investment in the ETF.

Competitors to SOL

A competitor to SOL which gains popularity and greater market share may precipitate a reduction in demand, use and prices of SOL, which may adversely impact the NAV of the ETF and an investment in the Units. Similarly, SOL and the price of SOL could be reduced by competition from incumbents in the credit card and payments industries, which may adversely impact the NAV of the ETF and an investment in the Units.

Central Bank Competition

Central banks have introduced digital forms of legal tender called Central Bank Digital Currencies ("**CBDCs**"). China's CBDC project, known as Digital Currency Electronic Payment, has reportedly been tested in a live pilot program conducted in multiple cities in China. A study published by the Bank for International Settlements estimates that 94% of the 86 central banks that responded to a survey on CBDCs are exploring CBDCs in some capacity. The survey also indicates that up to 15 CBDCs will likely be issued by 2030. According to the International Monetary Fund, there are three CBDCs officially in circulation - the Sand Dollar in The Bahamas, the eNaira in Nigeria, and JAM-DEX in Jamaica – and several others that are in various pilot stages, including the e-CNY in China. CBDCs, as legal tender in the issuing jurisdiction, could have an advantage when competing with, or replace, other cryptocurrencies as a medium of exchange or store of value. As a result, the value of SOL could decrease, which could adversely affect an investment in the ETF.

Unregulated Market Venues

Many digital assets trading platforms are not regulated as securities exchanges or commodity futures exchanges under the securities or commodity futures laws of Canada, the United States or other global jurisdictions. The venues through which SOL and other digital assets trade are new and, in many cases, largely unregulated. Furthermore, many such venues, including digital asset platforms and OTC market venues, do not provide the public with significant information regarding their ownership structure, management teams, corporate practices or regulatory compliance. As a result, the marketplace may lose confidence in, or may experience problems relating to, these venues. These market venues may impose daily, weekly, monthly or customer-specific transaction or withdrawal limits or suspend withdrawals entirely, rendering the exchange of SOL for fiat currency difficult or impossible. Participation in these market venues requires users to take on credit risk by transferring SOL from a personal account to a third party's account.

Over the past several years, a number of digital asset trading platforms have been closed due to fraud, failure or security breaches. In many of these instances, the customers of such digital asset trading platforms were not compensated or made whole for the partial or complete losses of their account balances in such digital asset trading platforms. While smaller digital asset trading platforms are less likely to have the infrastructure and capitalization that make larger digital asset trading platforms more stable, larger digital asset trading platforms are more likely to be appealing targets for hackers and "malware" (i.e., software used or programmed by attackers to disrupt computer operation, gather sensitive information or gain access to private computer systems).

Furthermore, many digital asset trading platforms lack certain safeguards put in place by more traditional exchanges to enhance the stability of trading on the platform and prevent flash crashes, such as limit-down circuit breakers. As a result, the prices of digital assets such as SOL on digital asset trading platforms may be subject to larger and/or more frequent sudden declines than assets traded on more traditional exchanges.

A lack of stability in digital asset trading platforms, manipulation of the SOL market by digital asset trading platform customers and/or the closure or temporary shutdown of such platforms due to fraud, business failure, hackers or malware, or government-mandated regulation may reduce confidence in SOL generally and result in greater volatility in the market price of SOL. Furthermore, the closure or temporary shutdown of a digital asset trading platform may impact the ability of the ETF to determine the value of its SOL holdings or to purchase or sell such SOL holdings. These potential consequences of a digital asset trading platform's failure or failure to prevent market manipulation could adversely affect the NAV of the ETF and an investment in the Units.

Liquidity Constraints on Digital Asset Trading Platforms

While the liquidity and traded volume of SOL are continually growing, it is still a maturing asset. The ETF may not always be able to acquire or liquidate its assets at a desired price. It may become difficult to execute a trade at a specific price when there is a relatively small volume of buy and sell orders in the marketplace, including on digital asset trading platforms. When transacting in SOL's market, the ETF will be competing for liquidity with other large investors, including speculators, validators, other investment funds and institutional investors.

Unexpected market illiquidity, and other conditions beyond the Manager's control, may cause major losses to the holders of a cryptocurrency or digital asset, including SOL. The large position in SOL that the ETF may acquire increases the risks of illiquidity by making SOL difficult to liquidate. In addition, liquidation of significant amounts of SOL by the ETF may impact the market price of SOL.

Risks of Political or Economic Crises

Political or economic crises may motivate large-scale sales of SOL and other cryptocurrencies, which could result in a reduction in the price of SOL and adversely affect the NAV of the ETF and an investment in the Units.

As an alternative to fiat currencies that are backed by central governments, cryptocurrencies, such as SOL, which are relatively new, are subject to supply and demand forces based upon the desirability of an alternative, decentralized means of buying and selling goods and services, and it is unclear how such supply and demand will be affected by geopolitical events. Nevertheless, political or economic crises may motivate large-scale acquisitions or sales of SOL either globally or locally. Large-scale sales of SOL would result in a reduction in the price and adversely affect the NAV of the ETF and an investment in the Units.

Banking Services

A number of companies that provide cryptocurrency-related services have been unable to find banks that are willing to provide them with bank accounts and banking services. Similarly, a number of such companies have had their existing bank accounts closed by their banks. Banks may refuse to provide bank accounts and other banking services to SOL-related companies or companies that accept SOL for a number of reasons, such as perceived compliance risks or costs. The difficulty that many businesses that provide digital asset-related services have and may continue to have in finding banks willing to provide them with bank accounts and other banking services may be currently decreasing the usefulness of SOL as a payment system and harming public perception of SOL or could decrease its usefulness and harm its public perception in the future. Similarly, the usefulness of SOL as a payment system and the public perception of SOL could be damaged if banks were to close the accounts of many or of a few key businesses providing digital asset-related services. This could decrease the value of SOL held by the ETF and therefore adversely affect the NAV of the ETF and an investment in the Units.

Insurance

Neither the ETF nor Cidel Custodian maintain insurance against risk of loss of SOL held by the ETF, as such insurance is not currently available in Canada on economically reasonable terms. The Sub-Custodians maintain appropriate insurance coverage for digital assets held in their respective cold storage system, as well as commercial crime insurance in respect of digital assets held in hot storage. However, the amounts and continuous availability of such coverage are subject to change at the sole discretion of the Sub-Custodians. The ETF's SOL is generally held in cold storage vaults only, except for SOL held in hot storage on a temporary basis to facilitate portfolio transactions, or deposits and redemptions. See "Organization and Management Details of the ETF – Sub-Custodians – Digital Asset Storage, Security Policies and Practices" for certain exceptions. To date, none of the Sub-Custodians have experienced a loss due to unauthorized access from its hot wallet or cold storage vaults.

Technological Change

Large holders of SOL and digital asset trading platforms must adapt to technological change in order to secure and safeguard client accounts. The ability of the Sub-Custodians to safeguard SOL that the ETF holds from theft, loss, destruction or other issues relating to hackers and technological attack is based upon known technology and threats. As technological change occurs, such threats will likely adapt, and previously unknown threats may emerge. Furthermore, the ETF may become a more appealing target of security threats as the size of the ETF's SOL holdings grow. If the Manager, the ETF, the Subadvisor, Cidel Custodian or a Sub-Custodian is unable to identify and mitigate or stop new security threats, the ETF's SOL may be subject to theft, loss, destruction or other attack, which could have a negative impact on the performance of its Units or result in loss of the ETF's assets.

Effects of Blockchain Analytics

SOL utilizes a public blockchain on which all transactions are publicly viewable and which contain certain information about the transactions, such as the public wallet addresses and amounts involved. Accordingly, individual SOL can be traced through statistical analysis, big data and by imposing an accounting convention such as "last in, first out" or "first in, first out." These methods are commonly referred to as "blockchain analytics". The fact that blockchain analytics can be performed implies that SOL is not perfectly fungible because prospective purchasers can theoretically discriminate against SOL by making certain assumptions about its particular transaction history in light of any legal risks associated with holding "tainted" currency, as the legal framework protecting fungibility of government-issued currency does not clearly apply to SOL. Potential risks include (i) a holder being exposed to conversion tort liability if SOL was previously stolen or (ii) a digital asset trading platform refusing to exchange SOL for government-issued currency on anti-money laundering or economic sanctions grounds. These concerns are exacerbated by the publication of SOL address "blacklists," such as the one published by the U.S. Treasury's Office of Foreign Assets Control (OFAC).

Though the market currently does not apply discounts or premia to SOL in this manner, if the risks noted above, or similar risks, begin to materialize, then blockchain analytics could lead to disruptions in the market. For example, if a digital asset trading platform begins to discriminate based on transaction history, individual units of another SOL could begin to have disparate value, possibly based on "grades" that are calculated based on factors such as age, transaction history and/or relative distance from flagged transactions or blacklisted addresses. Such developments could become a substantial limiting factor on SOL's usefulness as a currency, and serve to reduce the value of, or restrict the ETF's ability to liquidate, SOL held in its portfolio.

Bans or Prohibitions Affecting SOL

Digital assets including SOL currently face an uncertain regulatory landscape in many jurisdictions. Various foreign jurisdictions may, in the near future, adopt laws, regulations or directives that affect SOL and other digital assets. Such laws, regulations or directives may conflict with those of Canada or the United States and may negatively impact the acceptance of SOL by users, merchants and service providers in such jurisdictions and may therefore impede the growth or sustainability of the digital asset economy or otherwise negatively affect the value of SOL and therefore the value of the Units.

Additionally, regulators and legislatures have taken action against digital asset businesses or enacted restrictive regimes in response to adverse publicity arising from hacks, consumer harm, or criminal activity stemming from digital asset activity. Furthermore, it has been reported that certain South Korean digital asset trading platforms have experienced cybersecurity attacks by North Korean state actors with the intent of stealing digital assets. Cybersecurity attacks by state actors, particularly for the purpose of evading international economic sanctions, are likely to attract additional regulatory scrutiny to the acquisition, ownership, sale and use of digital assets, including SOL. Such adverse publicity or regulatory scrutiny could adversely affect the value of SOL, and therefore the value of the ETF and an investment in the Units.

Control of Outstanding SOL.

While publicly available information concerning the identity of SOL holders and the amount of SOL they hold is limited, the information that is publicly available suggests that a substantial minority (and possibly a majority) of SOL currently outstanding are held by Solana Labs, Inc., the Solana Foundation, the founders of SOL, its early employees and service providers and early investors in the technology. It is not uncommon for a relatively small number of digital wallets to hold a substantial amount of the outstanding supply of any given cryptocurrency, and it is possible that some of these wallets would be controlled by the same person or entity. Moreover, it is possible that other persons or entities control multiple wallets that collectively hold a significant amount of any given cryptocurrency, even if each wallet individually only holds a small amount. Given the likelihood that a substantial amount of SOL is held by a relatively small, concentrated ownership group, if one of these top holders of SOL were to liquidate their position, this could cause volatility in the price of SOL and in turn adversely affect the NAV per Unit of the ETF and an investment in the Units.

Demand for SOL may Exceed Supply

The demand for SOL may develop at a pace which exceeds supply which may frustrate users and cause them to lose faith in the Solana Network, which may in turn adversely affect the NAV per Unit of the ETF and/or lead to volatile NAV per Unit and an investment in the Units.

Risk Factors Relating to Staking Arrangements

Earning Yield Through Staking Risk

Under a PoS protocol, token holders who voluntarily commit to staking are given the exclusive right to validate transactions and participate in consensus. Token holders can elect to stake their SOL in order to earn staked SOL rewards, similar to a yield. SOL holders can actively participate in the staking of their SOL by operating a validator node. Alternatively, token holders can participate in staking by delegating their SOL to a validator node operated by another party. The ETF will not itself operate validator nodes, but may delegate tokens to validators selected by the Subadvisor.

Validator nodes are selected randomly to validate transactions and earn staked SOL rewards for completing such validation. Approximately every 400-600 milliseconds, a new block is added to the Solana Network with the latest transactions processed by the network, and the validator that generated this block is awarded SOL. As such, there is not a competitive race to solve a mathematical puzzle that prevails in a PoW consensus mechanism. One important benefit of the PoS protocol is the reduction in computing power, computing equipment and energy usage. Independent estimates are that electricity usage has decreased by over 99.5% for PoS versus PoW, thus aligning with global initiatives for carbon emission reductions.

Fees are paid to validators that participate in the consensus and propose new blocks on the Solana Network and other validators earn much lower fees for attesting to each block. Validators perform both roles on a continuous basis and are called upon on a random basis. Validators perform such functions on their own behalf and not as agent for any owner of SOL that may delegate SOL to them, although rewards may also be received by owners of SOL tokens that delegate the tokens to a validator.

The SOL trading market may be impacted by the supply of SOL that voluntarily elects to commit to staking.

Staking Timeline and Unbonding Periods Risk

Those who have staked SOL are able to withdraw their staked SOL and rewards from the Solana Network, however there are risks associated with withdrawing all or some of the staked SOL ("**unbonding**"). If the timing associated with the process of unbonding is for any reason delayed, the Manager will not be able to withdraw or liquidate the staked SOL. If there is a delay in the unbonding of SOL, this may prevent the ETF from realizing the fiat value of the staked SOL and rewards earned on staked SOL during the unbonding period. Given the volatility of SOL, the value of the staked SOL at the time of completion of the unbonding period may be significantly less than the value of the SOL at the time a decision is taken to withdraw staked SOL. Such delay may adversely affect the business and liquidity of the ETF and the NAV per Unit.

Reliance on Third-Party Validators

Staking Arrangements could be disrupted if the third-party service providers selected to act as validators experience operational or other systems difficulties, terminate their services, fail to comply with regulations, or raise their prices. The ETF may also suffer the consequences of such service providers' mistakes. For example, if the Sub-Custodians or any service providers selected to act as validators fail to behave as expected, suffer cybersecurity attacks, experience security issues or encounter other problems, the assets of the ETF may be irretrievably lost. The failure or capacity restraints of service providers, a cybersecurity breach involving any service providers or the termination or change in terms or price of a service agreement on which the ETF relies, could disrupt Staking Arrangements. Replacing service providers or addressing other issues with service providers could entail significant delay, expense and disruption for the ETF. As a result, if these service providers experience difficulties, are subject to cybersecurity breaches, terminate their services, dispute the terms of service agreements or raise their prices, and the manager is unable to replace them with other service providers, particularly on a timely basis, Staking Arrangements could be interrupted or disrupted.

Slashing and Missed Rewards Risk

The Solana Network dictates requirements for participation in the relevant decentralized governance activity and may impose slashing penalties if the relevant activities are not performed correctly, such as if the validator acts maliciously on the network, "double signs" any transactions or experiences extended downtime. If any service provider selected to act as validator for Staking Arrangements is slashed by the Solana Network, a variable amount of assets of the ETF will be burned by the Solana Network and irretrievable by the ETF. There is no assurance that the ETF or any staking service providers will not be subject to slashing penalties or that the ETF will be able to recover any percentage of SOL that has been subject to slashing penalties.

Validator downtime incurs a minor inactivity penalty by the Solana Network not exceeding the activity reward earned when a validator is functioning correctly. Penalties incurred during downtime can be offset by the validator resuming its duties. During a period of extended downtime, the ETF may also be prevented from obtaining rewards in respect of periods during which the validator is inactive on the Solana Network.

The Solana Network also imposes "bonding" periods on newly staked SOL during which staked SOL is ineligible for rewards. Once staking is initiated, a validator enters a queue to become "activated," which takes approximately two days. During the bonding period, the staked assets of the ETF will not be eligible to receive any staking rewards and may not be withdrawn.

Due Diligence on Staking Service Providers may be Insufficient Risk

The ETF will be exposed to the risk of loss of staked SOL if the staking service provider selected to act as a validator fails to operate its network node(s) in accordance with the rules of the Solana Network, as SOL may be "slashed" or inactivity penalties may be applied if the validator node "double signs" or experiences extended downtime. The ETF may also be prevented from obtaining rewards in respect of periods during which the validator is inactive on the Solana Network. The Manager and/or the Subadvisor intend(s) to mitigate these risks by conducting due diligence on staking service providers. In particular, the Manager and/or the Subadvisor intend(s) to consider the following factors in selecting staking service providers that provide validation services for Staking Arrangements:

- the persons that manage and direct the operations of the validator;
- the reputation of the validator and its use by others;
- the amount of crypto assets the validator has staked on its own nodes;
- the measures in place by the validator to operate the nodes securely and reliably;
- the financial status of the validator;
- the quality of the validator's work (i.e., the amount of downtime of the validator, past history of "double signing" and "double attestation/voting"); and

- any slashing penalties previously incurred by the validator.

Notwithstanding these efforts to mitigate risks related to malicious or incompetent validators, new facts may come to light which demonstrate that the Manager and/or the Subadvisor's initial assessment of a validator was flawed. In such instances, the ETF may be subject to the risks identified in "Slashing and Missed Rewards", and Staking Arrangements could be interrupted or disrupted. If the Manager and/or Subadvisor believe(s) that its initial assessment of a validator was flawed, it will likely seek out new service providers to assist it in providing Staking Arrangements, which could cause significant interruptions, disruptions or delays. In addition, notwithstanding the occurrence of an event that demonstrates that the Manager and/or the Subadvisor's initial assessment of a validator was flawed, the SOL staked with that validator may still be subject to an unbonding period during which the ETF will continue to have to rely on the services provided by such validator.

Due Diligence on the Solana Network may be Insufficient Risk

In addition to conducting due diligence on Staking and the review described in "Risk Factors– Due Diligence on Staking Service Providers may be Insufficient Risk", the Manager has conducted due diligence on how the Solana Network operates and the staking mechanism for SOL. The Manager's review focused on, among other things, publicly available information concerning: (i) material technical risks associated with the Solana Network's staking mechanism, including any code defects, security breaches and other threats concerning the staking mechanism; (ii) the scope and applicability of slashing and other penalties; (iii) the legal and regulatory risks associated with the Solana Network's staking mechanism, including any pending, potential, or prior civil, regulatory, criminal or enforcement action relating to the issuance, distribution or use of SOL; (iv) bonding and unbonding periods; (v) limits on the number of active validators; (vi) the mechanism for selecting validators; and (vii) token inflation.

Should new facts come to light which demonstrate that the Manager's initial review of the Solana Network's staking mechanism did not account for an unacceptable risk to the ETF, the Manager may determine that it is advisable to discontinue Staking Arrangements. The Manager's undertaking of these steps may occur concurrently with a rapid decline in the value of SOL and may also be a contributing factor to such decline. The ETF is subject to the risk that there may be very little liquidity in SOL while the Manager is undertaking these steps – especially if SOL continues to be staked or subject to unbonding periods.

No Guarantee of Receiving Rewards Risk

Staking is similar in concept to a yield generation activity. However, staking is not a passive activity to the validator and requires the validator to engage in the active function of running validator software. Yields are paid in SOL and are variable depending, primarily, on the total amount of SOL staked to the network. These activities are expected to result in SOL-denominated staking income accruing to the ETF in respect of SOL delegated to validators.

There is no guarantee that the ETF will receive any rewards in respect of staked SOL. Past rewards are not indicative of future returns. The staking rewards that the ETF may receive from staking SOL, if any, may be affected by, among other factors:

- the total amount of SOL staked by users of the Solana Network;
- the total amount of SOL staked pursuant to Staking Arrangements;
- changes to the Solana Network as a result of protocol governance decisions;
- changes to validator fees set by approved validators;
- anticipated or unanticipated downtime by approved validators;

- halts, outages or other anticipated or unanticipated interruptions affecting the Solana Network or validators involved in Staking Arrangements;
- "slashing" of SOL as a result of a violation of Solana Network rules by approved validators;
- validators ceasing to be eligible to participate in the Solana Network's PoS mechanism and earn rewards;
- "bonding", "unbonding" or other lock-up periods specified by the Solana Network;
- whether staking rewards are re-staked, either automatically by the Solana Network or as part of the operational processes of the Manager;
- re-delegation of the ETF's SOL to different validators; and
- delays or other operational factors related to or otherwise impacting Staking Arrangements.

Risk Factors Relating to an Investment in the ETF

No Assurances of Achieving Objective

There is no assurance that the ETF will be able to achieve its investment objective.

Possible Loss of Investment

An investment in the ETF is appropriate only for investors who have the capacity to absorb a loss on their investment.

No Guarantee of a Return on Investment

There is no guarantee that an investment in Units will earn any positive return in the short or long term as the NAV of the ETF will generally fluctuate with the price of SOL it holds and no interest or dividends will be earned on SOL that is owned directly or indirectly by the ETF.

Risks Related to Passive Investments

An investment in the Units should be made with an understanding that the NAV of the ETF will generally fluctuate in accordance with the price of SOL it invests in based on the Solana Index. Because it is the ETF's objective to invest in SOL on a passive basis, the ETF's holdings will not be actively managed and accordingly, will not be hedged or repositioned to attempt to take defensive positions if the price of SOL declines or is expected to decline. The ETF will invest substantially all of its assets in SOL.

Concentration Risk

The ETF's investment objective is to provide Unitholders exposure to SOL and the ETF is not expected to have exposure to any other investments or assets. Other than cash or cash equivalents, the ETF will invest substantially all of its assets in SOL.

As a result, the ETF's holdings are not diversified. The NAV of the ETF may be more volatile than the value of a more broadly diversified portfolio or investment fund and may fluctuate substantially over short period of time. This may have negative impact on the NAV of the ETF.

An investment in the ETF may be deemed speculative and is not intended as a complete investment program. An investment in the ETF should be considered only by persons financially able to maintain their investment and who can bear the risk of loss associated with an investment in the ETF. Investors should review closely the objective and strategy of the ETF and familiarize themselves with the risks associated with an investment in the ETF.

Global Economic Conditions and Market Risk

Market risk is the risk that the ETF's investments will go down in value, including the possibility that such investments will go down sharply or unpredictably. Such decline may be based on company-specific developments, industry-specific developments and/or market trends. Several factors can influence market trends, such as general economic conditions, regulatory changes, changes in interest rates and currency exchange rates, geopolitical changes, global pandemics or health crises, wars and occupations, terrorism and catastrophic events. These events could also have an acute effect on individual issuers or related groups of issuers, including as a result of a disruption to business operations due to quarantined employees, customers and suppliers in affected areas and due to closure of offices, manufacturing facilities, warehouses and logistics supply chain.

The securities markets have in recent years been characterized by significant volatility and unpredictability due to similar events described above. Continued instability in the markets may increase the risks inherent in portfolio investments made by the ETF and a substantial drop in the markets in which the ETF invests could be expected to have a negative effect on the ETF.

Tariff Risk

Beginning in January 2025, the United States announced certain tariffs on imports from various countries, including Canada. In response, the Government of Canada announced retaliatory tariffs on certain imports from the United States and the Government of Ontario announced a levy on electricity sold into the United States.

There is uncertainty as to whether additional tariffs or retaliatory tariffs will be implemented, which countries will be subject to tariffs, the quantum of such tariffs, the goods on which they may be applied and the ultimate impact on supply chains and business costs. Such uncertainty may also adversely impact the performance of the global economy and individual companies, even if such companies are not directly subject to tariffs. Changes in U.S. trade policies, levies imposed by Canadian governments, the enforcement of new and existing trade laws, and the responses of other countries could, in certain circumstances, impose significant burdens on international trade, the broader financial system and the economy. Increased global trade restrictions may also result in inflation. Further, the potential introduction of protectionist or retaliatory international trade tariffs, domestic "buy local" policies, sanctions or other barriers to international commerce may impact the global economy and stability of global financial markets which could consequently have a material adverse impact on the markets and securities in which the ETF may invest.

Liquidity Risk

On any Trading Day, Unitholders may redeem Units, in any number, for cash at a redemption price per Unit equal to 95% of the closing price for the Units on the TSX on the effective day of the redemption, subject to certain conditions. To fund the payment of the redemption price, the ETF may dispose of SOL. The ability of the ETF to dispose of SOL may be restricted by an event beyond its control, such as wars, interference by civil or military authorities, civil insurrections, local or national emergencies, blockades, seizures, riots, sabotage, vandalism, terrorism, storms, earthquakes, floods or nuclear or other explosions, or unexpected market illiquidity. During such events, the ETF may experience a delay in the receipt of the proceeds of disposition until such time as the ETF is able to dispose of its SOL or may be able to do so only at prices which may not reflect the fair value of such investments.

Reliance on the Manager, the Subadvisor and/or a Sub-Custodian

Unitholders will be dependent on the abilities of the Manager, the Subadvisor and/or a Sub-Custodian, to effectively administer the affairs and implement the investment objective and strategy of the ETF and/or on a Sub-Custodian to safely custody the ETF's SOL. The Subadvisor depends, to a great extent, on a very limited number of individuals in the administration of its activities as subadvisor of the ETF. The loss of the services of any one of these individuals for any reason could impair the ability of the Subadvisor to perform its duties as subadvisor on behalf of the ETF. In addition, the Manager and the Subadvisor may have additional conflicts of interests as described under "Organization and Management Details of the ETF – Manager", "Organization and Management Details of the ETF – Subadvisor" and "Organization and Management Details of the ETF – Sub-Custodians", respectively. If a Sub-Custodian did not adequately safeguard the ETF's SOL, the ETF could suffer significant losses.

No Direct Ownership Interest in SOL

An investment in Units does not constitute an investment by Unitholders in SOL, cash and cash equivalents included in the ETF's portfolio. Unitholders will not directly own SOL or cash or cash equivalents held by the ETF.

Other SOL Investment Funds

The ETF will compete with other current and future financial vehicles and investment funds that offer economic exposure to the price of SOL. Such competitors may invest in SOL, including through securities backed by or linked to SOL, such as exchange-traded products. Other competitors may invest in derivative financial products, which utilize SOL as the underlying asset. Market and financial conditions, and other conditions beyond the ETF's control, may make it more attractive for investors to redeem or sell Units of the ETF in order to invest in other such financial vehicles, which could adversely affect Unitholders who continue to hold the Units. Furthermore, more attractive investment products not currently on the market could develop, which may also lead to investors redeeming or selling their Units.

If other financial vehicles or investment funds tracking the price of SOL are formed and come to represent a significant proportion of the demand for SOL, large redemptions of the securities of such competitors could result in large scale SOL liquidations. This could, in turn, negatively affect SOL prices, the ETF's holding of SOL and the NAV of the ETF. In addition, these financial vehicles and other entities with substantial holdings in SOL may engage in large-scale hedging, sales or distributions which could also negatively impact the NAV of the ETF. See "Large-Scale Sales or Distributions".

Large-Scale Sales or Distributions

Some entities hold large amounts of SOL relative to other market participants, and to the extent such entities engage in large-scale hedging, sales or distributions on nonmarket terms, or sales in the ordinary course, it could result in a reduction in the price of SOL and adversely affect the NAV of the ETF and an investment in the Units. Additionally, political or economic crises may motivate large-scale acquisitions or sales of such digital assets, including SOL, either globally or locally. Such large-scale sales or distributions could result in selling pressure that may reduce the price of SOL and adversely affect the NAV of the ETF and an investment in the Units.

Changes in Legislation

There can be no assurance that certain laws applicable to the ETF, including income tax laws (such as the treatment of mutual fund trusts and cryptocurrency under the Tax Act) and regulations related to SOL and other digital assets and Staking Arrangements, will not be changed in a manner which adversely affects the ETF or the Unitholders.

Price Fluctuation

The price of a security of an investment fund will generally vary with the value of the assets it directly or indirectly holds. The ETF is designed to mirror as closely as possible the performance of the price of SOL in which it invests. The price of SOL has fluctuated significantly over the past several years. Changes in global supply and demand, global or regional political, regulatory, economic or financial events and situations, especially those unexpected in nature, pandemics, investor expectations with respect to inflation, currency exchange rates, investment and trading activities of commodity funds may influence the value of SOL directly held by the ETF and accordingly the NAV of the ETF.

Price Fluctuation and Staking Service Fee Risk

The Manager is entitled to receive a Staking Service Fee equal to up to 35% of the staking rewards of SOL generated for the ETF by Staking Arrangements (net of fees payable to validators). The Staking Service Fee will be calculated daily and paid monthly, in arrears. Accordingly, the Manager will calculate the Staking Service Fee payable daily (based on the staking rewards of SOL and the price of SOL on such day) and may not sell the SOL for such payment until the end of each month or such other later time as determined by the Manager in its sole discretion. There can be no assurance that the price of SOL will remain the same between the time of fee calculation and the selling of SOL (the "**Period**"), in particular given the significant price fluctuations of SOL over the past several years. If the price of SOL decreases during the Period, the ETF will have to sell a greater number of SOL (as compared to such number if the Manager sold the SOL at the same time as the fee calculation), which would adversely impact the NAV of the ETF and an investment in the Units.

Trading Price of Units

Units may trade in the market at a discount to the NAV per Unit, and there can be no assurance that the Units will trade at a price equal to (or greater than) the NAV per Unit.

Standard of Care

Each of the Manager, the Subadvisor, Cidel Custodian and/or Sub-Custodian are subject to a contractual standard of care in carrying out its duties with respect to the ETF. If the ETF suffers a loss of its SOL and each of the Manager, the Subadvisor, Cidel Custodian and/or Sub-Custodian satisfied its respective standard of care, the ETF will bear the risk of such loss with respect to such parties.

Under the terms of the Cidel Custodian Agreement, Cidel Custodian is required to exercise the standard of care applicable to custodians under NI 81-102. However, Cidel Custodian will not be liable to the ETF for any loss of the ETF's SOL held by a Sub-Custodian unless such loss is directly caused by Cidel Custodian's gross negligence, fraud, wilful default, or the breach of its standard of care. In the event of such loss, Cidel Custodian is required to take reasonable steps to enforce such rights as it may have against a Sub-Custodian pursuant to the terms of the applicable Sub-Custodian Agreement and applicable law.

Residency of the Subadvisor and the Sub-Custodians

The Subadvisor and the Sub-Custodians are resident outside of Canada and all or a substantial portion of their assets are located outside Canada. As a result, anyone, including the ETF, seeking to enforce legal rights against the Subadvisor or the Sub-Custodians in Canada may find it difficult to do so.

Conflicts of Interest

The Subadvisor currently manages private funds that invest in SOL and the Manager, the Subadvisor and their respective directors, officers, and their affiliates and associates may engage in the promotion, management or investment management of one or more funds or trusts which invest in SOL or other cryptocurrencies in the future.

Although officers, directors and professional staff of the Manager and the Subadvisor devote as much time to the ETF as the Manager or the Subadvisor, as applicable, deems appropriate to perform its duties, the staff of the Manager and the Subadvisor may have conflicts in allocating their time and services among the ETF and the other portfolios of the Manager or the Subadvisor, as applicable.

SOC 1 Type 2 and/or SOC 2 Type 2 Report of the Sub-Custodians

Each Sub-Custodian has advised the Manager that a SOC 1 Type 2 and/or SOC 2 Type 2 Report of its internal controls will be available for review by the auditor of the ETF in connection with the audit of the annual financial statements of the ETF. However, there is a risk that such SOC 1 Type 2 and/or SOC 2 Type 2 Report of a Sub-Custodian will not be available. In the event that a SOC 1 Type 2 and/or SOC 2 Type 2 Report is not available, the Manager will request confirmation from the Sub-Custodian in writing to permit the auditor of the ETF to test its internal controls. Although the Manager has received reasonable assurances from each Sub-Custodian that such written confirmation will be provided, in the event that a SOC 1 Type 2 and/or SOC 2 Type 2 Report of a Sub-Custodian is not available, there is a risk that such written confirmation will not be provided and/or that the auditor will not be able to test the internal controls of the Sub-Custodian directly. The ETF has filed an undertaking with applicable securities regulatory authorities that provides that while it remains a reporting issuer, the ETF will obtain from each Sub-Custodian of the ETF either a SOC 1 Type 2 and/or SOC 2 Type 2 Report or written confirmation from the Sub-Custodian to permit the auditor of the ETF to test its controls.

In the event that the auditor of the ETF cannot: (i) review a SOC 1 Type 2 and/or SOC 2 Type 2 Report of a Sub-Custodian; or (ii) test the internal controls of a Sub-Custodian directly in connection with its audit of the ETF's annual financial statements, the auditor would not be able to complete its audit of the annual financial statements of the ETF in accordance with the current guidance of the Canadian Public Accountability Board.

Limited Designated Brokers Trade in SOL

There are limited Designated Brokers and Dealers operating in the digital assets sector that trade in SOL. As the ETF will only issue Units directly to Designated Brokers and Dealers, the inability to enter into agreements with Designated Brokers and Dealers that trade in SOL could adversely affect the ETF.

U.S. Currency Exposure

The ETF's functional and presentation currency is and the investor's investment will be made in U.S. dollars (although the ETF and investors are required to compute their income and gains for Canadian tax purposes in Canadian dollars – see "Income Tax Considerations"). The ETF purchases SOL, which is currently denominated in U.S. dollars.

Exchange Risk

In the event that the TSX closes early or unexpectedly on any day that it is normally open for trading, Unitholders will be unable to purchase or sell Units on the TSX until it reopens and there is a possibility that, at the same time and for the same reason, the exchange and redemption of Units may be suspended until the TSX reopens.

Multi-Series Risk

The ETF offers more than one series of Units. If the ETF cannot pay the expenses or satisfy the obligations entered into by the ETF for the sole benefit of one of those series of Units using such series of Units' proportionate share of the assets, the ETF may have to pay those expenses or satisfy those obligations out of another series of Units' proportionate share of the assets, which would lower the investment return of such other series of Units. In addition, a creditor of the ETF may seek to satisfy its claim from the assets of the ETF as a whole, even though its claim or claims relate only to a particular series of Units.

Service Providers are Not Fiduciaries

The service providers, including custodians and sub-custodians, that the ETF employs or may employ in the future are not trustees for, and owe no fiduciary duties to, the ETF or the Unitholders. In addition, service providers employed by the ETF have no duty to continue to act as a service provider to the ETF. Current or future service providers, including custodians and sub-custodians, can terminate their role for any reason whatsoever upon the notice period provided under the relevant agreement. A service provider may also be terminated by the Manager.

Lack of Arbitrage Transactions

If the processes of creation and redemption of Units of the ETF encounters any unanticipated difficulties, potential market participants, such as broker-dealers and their customers, who would otherwise be willing to purchase or redeem Units of the ETF to take advantage of any arbitrage opportunity arising from discrepancies between the price of the Units of the ETF and the price of the underlying SOL may not take the risk that, as a result of those difficulties, they may not be able to realize the profit they expect. If this is the case, the liquidity of the Units of the ETF may decline, and the trading price of the ETF may fluctuate independently of the price of SOL and may fall or otherwise diverge from the NAV of the Units.

Operational Risk

The ETF depends on the Manager and the Subadvisor to develop the appropriate systems and procedures to control operational risk. Operational risks arising from mistakes made in the confirmation or settlement of transactions, from transactions not being properly booked, evaluated, or accounted for, or other similar disruption in the ETF's operations may cause the ETF to suffer financial loss, the disruption of their business, liability to investors or third parties, regulatory intervention, or reputational damage. The ETF relies heavily on the Manager and the Subadvisor and other service providers' financial, accounting, IT infrastructure systems and services and other data processing systems and a failure by any one or more of them could result in losses to the ETF.

Systems Risks

The ETF will depend on the Manager and the Subadvisor to develop and implement appropriate systems for the ETF's activities. The ETF will rely extensively on computer programs and systems to monitor its portfolio and net capital and to generate reports that are critical to the oversight of the ETF's activities. In addition, certain of the operations of the Manager and the Subadvisor interface with or depend on systems operated by third parties, including market counterparties and other service providers, and the ETF, the Manager or the Subadvisor may not be in a position to verify the risks or reliability of such third-party systems. These programs or systems may be subject to certain defects, failures, or interruptions, including, but not limited to, those caused by worms, viruses, and power failures. Any such defect or failure could have a material adverse effect on the ETF.

Tax Risks

"Mutual fund trust" status – In order to qualify as a mutual fund trust under the Tax Act, the ETF must comply with various requirements contained in the Tax Act, including to restrict its undertaking to the investment of its funds in property and to comply on a continuous basis with certain requirements relating to the qualification of its Units for distribution to the public, the number of Unitholders of a particular series of Units of the ETF and the dispersal of ownership of that series of Units.

The ETF is expected to meet all the requirements to qualify as a *"mutual fund trust*" for the purposes of the Tax Act before the 91st day after the end of its first taxation year (determined without regard to any taxation year end that may be deemed to occur for other purposes under the rules in the Tax Act relating to *"loss restriction events*"). Assuming the ETF meets these requirements before such day, it will file an election to qualify as a mutual fund trust from its inception in 2025.

If an ETF does not qualify or ceases to qualify as a mutual fund trust (whether as a result of a change in law or administrative practice, or due to its failure to comply with the current Canadian requirements for qualification as a mutual fund trust), it may experience various potential adverse consequences. For example, the ETF would be subject to a requirement to withhold tax on distributions made to non-resident Unitholders of any taxable capital gains; its Units would not qualify as "Canadian securities" for the purposes of the election provided in subsection 39(4) of the Tax Act; and it would not be entitled to the Capital Gains Refund. An ETF that does not qualify as a mutual fund trust will be a "financial institution" for purposes of the "mark-to-market property" rules contained in the Tax Act if one or more financial institutions, as defined in the Tax Act, owns more than 50% of the fair market value of the Units of the ETF. An ETF that becomes or ceases to be a financial institution will be deemed to have a year-end for tax purposes at such time, which would result in an unscheduled distribution of the ETF's net income and net realized capital gains, if any, at such time to Unitholders so that the ETF is not liable for ordinary income tax on such amounts under Part I of the Tax Act.

"*SIFT Rules*" – The SIFT Rules apply to trusts that are resident in Canada for the purposes of the Tax Act and that hold one or more "non-portfolio properties" (as defined in the Tax Act) and the Units of which are listed or traded on a stock exchange or other public market ("**SIFT trust**"). For this purpose, "non-portfolio property" of the ETF would include any property that the ETF (or a person or partnership that does not deal at arm's length with the ETF for purposes of the Tax Act) uses in the course of carrying on a business in Canada. If the ETF is a SIFT trust, it will generally be subject to tax, at a combined federal and provincial tax rate comparable to that applicable to a Canadian corporation, on its income from a business carried on by it in Canada or from a non-portfolio property (other than a taxable dividend) and net taxable capital gains realized on the disposition of a non-portfolio property (generally, "non-portfolio earnings" under the Tax Act), to the extent this income or gain is distributed to Unitholders. Unitholders who receive distributions from the ETF of this income or gain will be deemed to receive a taxable dividend from a Canadian corporation. The total of the tax payable by the ETF on its non-portfolio earnings and the tax payable by a Unitholder on the distribution of those earnings will generally be more than the tax that would have been payable in the absence of the tax rules that apply to a SIFT trust.

The CRA has indicated that the characterization of staking rewards as income from property or a business depends on the "level of activity" of the taxpayer in earning that income, and that this determination should be based on an examination of all the circumstances. However, there remains significant uncertainty with respect to the tax treatment of cryptocurrency staking, including the potential application of the SIFT Rules in this context.

The Manager intends to take the position that the ETF (and any person or partnership that does not deal at arm's length with the ETF for purposes of the Tax Act) will not use the ETF's SOL or any other property of the ETF in the course of carrying on a business in Canada and accordingly will not be a SIFT trust. However, no advance income tax ruling has been sought or obtained from the CRA in respect of the status of the ETF under the SIFT Rules, and therefore the CRA could seek to assess or reassess the ETF as a SIFT trust.

If the ETF is subject to tax under the SIFT Rules, the after-tax return to its Unitholders could be reduced, particularly in the case of a Unitholder who is exempt from tax under the Tax Act or is a non-resident of Canada.

Treatment of gains and losses on dispositions of SOL by the ETF – treatment of forks and air drops – The ETF generally will treat gains (or losses) as a result of any disposition of SOL as capital gains (or capital losses). The CRA has stated that gains (or losses) of a taxpayer resulting from transactions in cryptocurrency (which includes SOL) should generally be treated for tax purposes as capital gains (or capital losses), unless the gains (or losses) result from carrying on a business or an adventure or concern in the nature of trade. However, the CRA has also stated that it generally treats cryptocurrency like a commodity for purposes of the Tax Act and that gains (or losses) of mutual fund trusts resulting from transactions in commodities should generally be treated for income tax purposes as ordinary income rather than as capital gains, although the treatment in each particular case remains a question of fact to be determined having regard to all the circumstances. In addition, SOL may become subject to network forks and/or certain related occurrences such as air drops (see "Risk Factors Relating to SOL – Network Forks" and "Risk Factors Relating to SOL – Air Drops"). The tax treatment of forks, air drops and other occurrences affecting SOL is subject to considerable uncertainty, and the CRA may disagree with positions taken by the ETF in this regard.

If any transactions of the ETF are reported by it on capital account, but are subsequently determined by the CRA to be on income account, or if the CRA were to disagree with positions taken by the ETF in relation to forks, air drops or other occurrences affecting SOL, there may be an increase in the net income of the ETF, which is generally automatically distributed by the ETF, as applicable, to its Unitholders under the terms of the Declaration of Trust at the ETF's taxation year end; with the result that Canadian-resident Unitholders could be reassessed by the CRA to increase their taxable income by the amount of such increase, and non-resident Unitholders potentially could be assessed directly by the CRA for Canadian withholding tax on the amount of net gains on such transactions that were treated by the CRA as having been distributed to them.

The CRA could assess the ETF for a failure of the ETF to withhold tax on distributions made by it to non-resident Unitholders that are subject to withholding tax, and typically would do so rather than assessing the non-resident Unitholders directly. Accordingly, any such re-determination by the CRA may result in the ETF being liable for unremitted withholding taxes on prior distributions made to Unitholders who were not resident in Canada for the purposes of the Tax Act at the time of the distribution. As the ETF may not be able to recover such withholding taxes from the non-resident Unitholders whose Units are redeemed, payment of any such amounts by the ETF would reduce the NAV of the ETF.

"*Interest deductibility*" – Recent amendments to the Tax Act, (the "**EIFEL Rules**") would generally limit the deductibility of interest and other financing-related expenses by an entity to the extent that such expenses, net of interest and other financing-related income, exceed a fixed ratio of the entity's tax earnings before interest, taxes, depreciation and amortization (EBITDA). If the EIFEL Rules were to apply to restrict deductions otherwise available to the ETF, the taxable component of distributions paid by the ETF to Unitholders may be increased, which could reduce the after-tax return associated with an investment in Units. Although certain investment funds that are considered to be "excluded entities" for purposes of the EIFEL Rules may be excluded from the application of such proposals, there can be no assurance that the ETF would qualify as an "excluded entity" for these purposes, and hence the ETF could be subject to the EIFEL Rules.

"Loss restriction event" – If the ETF experiences a "loss restriction event", it will: (i) be deemed to have a year-end for tax purposes (which would result in an allocation of the ETF's taxable income at such time to Unitholders so that the ETF is not liable for income tax on such amounts); and (ii) become subject to the loss restriction rules generally applicable to corporations that experience an acquisition of control, including a deemed realization of any unrealized capital losses and restrictions on their ability to carry forward losses. Generally, the ETF will be subject to a loss restriction event when a person becomes a "majority-interest beneficiary" of the ETF, or a group of persons becomes a "majority-interest group of beneficiaries" of the ETF, as those terms are defined in the affiliated persons rules contained in the Tax Act, with appropriate modifications. Generally, a majority-interest beneficiary of the ETF will be a beneficiary who, together with the beneficial interests of persons and partnerships with whom the beneficiary is affiliated, has a fair market value that is greater than 50% of the fair market value of all the interests in the income or capital, respectively, in the ETF. Trusts that qualify as "investment funds" as defined in the rules in the Tax Act relating to loss restriction events are generally excepted from the application of such rules. An "investment fund" for this purpose includes a trust that meets certain conditions, including satisfying certain of the conditions necessary to qualify as a "mutual fund trust" for purposes of the Tax Act, not holding any property that it uses in the course of carrying on a business and complying with certain asset diversification requirements. If the ETF were not to qualify as an "investment fund", it could potentially have a loss restriction event and thereby become subject to the related tax consequences described above.

Qualified Investment

As part of the 2024 Federal Budget, the Department of Finance (Canada) announced that it would be engaging in a consultation on the qualified investment rules in the Tax Act, including whether crypto-backed assets are appropriate as qualified investments for Registered Plans. Submissions for this consultation were open until July 15, 2024. It is the Manager's understanding that several industry associations provided submissions in support of the continued appropriateness of crypto-backed assets (such as units of the ETF) as qualified investments for Registered Plans; however, there can be no assurance that the Department of Finance (Canada) will agree with such submissions. Where a Registered Plan acquires or holds a security that is not a qualified investment under the Tax Act for the Registered Plan, adverse tax consequences may arise for the Registered Plan and the annuitant, beneficiary, subscriber or holder thereof.

Absence of an Active Market for the Units and No Operating History

The ETF is a newly established investment trust with no operating history as an ETF. Although Units of the ETF may be listed on the TSX, there can be no assurance that an active public market for the Units will develop or be sustained.

Nature of Units

The Units represent a fractional interest in the assets of the ETF. Unitholders will not have the statutory rights normally associated with ownership of shares of a corporation including, for example, the right to bring "oppression" or "derivative" actions.

Potential purchasers may wish to consult with their own investment advisers for advice in connection with an investment in the Units.

INVESTMENT RISK CLASSIFICATION METHODOLOGY

Risk Rating of the ETF

The investment risk level of the ETF is required to be determined in accordance with a standardized risk classification methodology that is based on its historical volatility, as measured by the 10-year standard deviation of its returns. If the ETF has less than 10 years of performance history, the Manager calculates the investment risk level of the ETF by using a reference index that is expected to reasonably approximate the standard deviation of the ETF. Once the ETF has 10 years of performance history, the methodology calculates the standard deviation of the ETF by using its performance history, rather than that of its reference index. The ETF is assigned an investment risk rating in one of the following categories: low, low to medium, medium, medium to high or high risk.

The following table sets out the reference index used for the ETF for the portion of the 10-year calculation period during which the ETF did not exist:

ETF	Reference Index	Description of Reference Index
CI Galaxy Solana ETF	Bloomberg Galaxy Solana Index	The Bloomberg Galaxy Solana Index is designed to measure the performance of one SOL token traded in U.S. dollars. The index is maintained by Bloomberg Index Services Limited and is co-branded with the Subadvisor.

The Manager has assigned the ETF a risk rating of high. Investors should consider their own risk profile (risk tolerance and capacity for risk) and speak with their advisor to determine if an investment in the ETF may be suitable for them.

Unitholders should know that other types of risks, both measurable and non-measurable, exist. Also, just as historical performance may not be indicative of future returns, historical volatility may not be indicative of future volatility. The risk rating of the ETF is reviewed annually and anytime it is no longer reasonable in the circumstances. A more detailed explanation of the risk classification methodology used to identify the risk rating is available on request, at no cost, by calling 1-800-792-9355 (toll free) or by emailing service@ci.com.

DISTRIBUTION POLICY

It is not anticipated that the ETF will make cash distributions.

If the ETF’s net income for tax purposes, including net realized capital gains, for any year exceeds the aggregate amount of the distributions made in the year to Unitholders, if any, the ETF will be required to pay one or more special year-end distributions in such year to Unitholders as is necessary to ensure that the ETF will not be liable for income tax on such amounts under the Tax Act (after taking into account all available deductions, credits and refunds). Such special distributions may be paid in the form of Units and/or cash. Any special distributions payable in Units of the applicable series will increase the aggregate adjusted cost base of a Unitholder's Units of such series. Immediately following payment of such a special distribution in Units of the applicable series, the number of Units of such series outstanding will be automatically consolidated such that the number of Units outstanding after such distribution will be equal to the number of Units outstanding immediately prior to such distribution, except in the case of a non-resident Unitholder to the extent tax was required to be withheld in respect of the distribution. See "Income Tax Considerations".

PURCHASES OF UNITS

Investment in the ETF

In compliance with NI 81-102, the Units of the ETF will not be issued to the public until subscriptions aggregating not less than C$500,000 have been received and accepted by the ETF from investors other than persons or companies related to the Manager or its affiliates.

Issuance of Units

Units of the ETF are being issued and sold on a continuous basis and there is no maximum number of Units that may be issued.

To Designated Brokers and Dealers

All orders to purchase Units directly from the ETF must be placed by a Designated Broker or Dealer. The ETF reserves the absolute right to reject any subscription order placed by the Designated Broker and/or a Dealer. No fees will be payable by the ETF to the Designated Broker or a Dealer in connection with the issuance of Units. On the issuance of Units, the Manager may, at its discretion, charge an administrative fee to a Dealer or Designated Broker to offset any expenses (including any applicable TSX additional listing fees) incurred in issuing the Units.

On any Trading Day, the Designated Broker or a Dealer may place a subscription order for the PNU or integral multiple PNU of the ETF.

If a subscription order is received by the ETF at or before 9:00 a.m. (Toronto time) on a Trading Day, or such other time prior to 4:00 p.m. (Toronto time) on such Trading Day as the Manager may permit, and is accepted by the Manager, the ETF will generally issue to the Dealer or Designated Broker a PNU (or an integral multiple thereof) within two Trading Days from the effective date of the subscription order or such other day as mutually agreed between the Manager and the Designated Broker or Dealer, provided that payment for the Units has been received.

As payment for a PNU of the ETF, a Dealer or Designated Broker must deliver payment consisting of SOL and/or cash, in an amount equal to the NAV of the PNU of the ETF determined at the Valuation Time (as defined herein) on the effective date of the subscription order, plus if applicable, any fees payable in connection with cash payments for subscriptions of a PNU of the ETF, representing, as applicable, brokerage expenses, commissions, transaction costs and other costs or expenses that the ETF incurs or expects to incur in purchasing portfolio assets on the market with such cash proceeds.

The Manager will, except when circumstances prevent it from doing so, publish the PNU for the ETF following the close of business on each Trading Day on its website, www.ci.com. The Manager may, at its discretion, increase or decrease the applicable PNU from time to time.

Buying and Selling Units of the ETF

The Units have been conditionally approved for listing on the TSX under the symbol "SOLX". Subject to satisfying the TSX's original listing requirements, the Units of the ETF will be listed on the TSX, and investors will be able to buy or sell such Units on the TSX through registered brokers and dealers in the province or territory where the investors reside. Investors may incur customary brokerage commissions in buying or selling Units. No fees are paid by investors to the Manager or the ETF in connection with buying or selling of Units on the TSX.

Special Considerations for Unitholders

The provisions of the so-called "early warning" requirements set out in Canadian securities legislation do not apply in connection with the acquisition of Units. In addition, the ETF is entitled to rely on exemptive relief from the Canadian securities regulatory authorities to permit a Unitholder to acquire more than 20% of the Units of the ETF through purchases on the TSX without regard to the takeover bid requirements of applicable Canadian securities legislation.

REDEMPTION AND EXCHANGE OF UNITS

As described under "Book-Entry Only System", registration of interests in, and transfers of, Units will be made only through the book-entry only system of CDS. The redemption rights described below must be exercised through the CDS Participant through which the owner holds securities. Beneficial owners of Units should ensure that they provide redemption instructions to the CDS Participant through which they hold such Units sufficiently in advance of the cut-off times described below to allow such CDS Participant to notify CDS and for CDS to notify the Registrar and Transfer Agent prior to the relevant cut-off time.

Redemption and Exchange of Units

On any Trading Day, Unitholders of the ETF may redeem (i) Units of the ETF for cash at a redemption price per Unit equal to 95% of the closing price for the Units on the TSX on the effective day of the redemption, subject to a maximum redemption price per Unit equal to the NAV per Unit on the effective day of redemption, less any applicable redemption fee determined by the Manager, in its sole discretion, from time to time, or may exchange (ii) a PNU or a multiple PNU for cash, or if agreed to and permitted by the Manager, for cash and portfolio assets, equal to the NAV of that number of Units of the ETF less any applicable redemption fee determined by the Manager, in its sole discretion from time to time. The redemption price will be paid in U.S. dollars. Since Unitholders will generally be able to sell Units at the market price on the TSX through a registered broker or dealer subject only to customary brokerage commissions, Unitholders of the ETF are advised to consult their brokers, dealers or investment advisors before redeeming such Units for cash. No fees or expenses are paid by Unitholders to the Manager or the ETF in connection with selling Unit on the TSX.

In order for a cash redemption or exchange to be effective on a Trading Day, a cash redemption or exchange request must be delivered to the Manager in the form and at the location prescribed by the Manager from time to time by 9:00 a.m. (Toronto time) on such Trading Day (or such later time as the Manager may permit). Any cash redemption or exchange request received after such time will be effective only on the second Trading Day. The cash redemption or exchange request forms may be obtained from any registered broker or dealer. Where possible, payment of the redemption price will be made by no later than the second Trading Day after the effective day of redemption.

Unitholders that have delivered a redemption request prior to the Distribution Record Date for any distribution will not be entitled to receive that distribution.

In connection with the redemption (or cash exchange) of Units of the ETF, the ETF will generally dispose of portfolio assets to satisfy the redemption.

Suspension of Redemptions and Exchanges

The Manager may suspend the redemption or exchange of Units or payment of redemption proceeds of the ETF with the prior permission of the securities regulatory authorities, for any period during which the Manager determines that conditions exist that render impractical the sale of assets of the ETF or that impair the ability of the Valuation Agent to determine the value of the assets of the ETF. The suspension may apply to all requests for redemption received prior to the suspension but as to which payment has not been made, as well as to all requests received while the suspension is in effect. All Unitholders making such requests shall be advised by the Manager of the suspension and that the redemption will be effected at a price determined on the first Valuation Day (as defined herein) following the termination of the suspension. All such Unitholders shall have and shall be advised that they have the right to withdraw their requests for redemption. The suspension shall terminate in any event on the first day on which the condition giving rise to the suspension has ceased to exist, provided that no other condition under which a suspension is authorized then exists. To the extent not inconsistent with official rules and regulations promulgated by any government body having jurisdiction over the ETF, any declaration of suspension made by the Manager shall be conclusive.

Redemption fee

This fee, which is payable to the ETF, does not apply to Unitholders who buy and sell their Units through the facilities of the TSX.

An amount as may be agreed to between the Manager and the Designated Broker or a Dealer of the ETF may be charged by the Manager at its discretion, on behalf of the ETF, to the Designated Broker and/or Dealers to offset certain transaction costs including brokerage expenses, commissions and other costs and expenses associated with the issue, exchange or redemption of Units of the ETF to or by such Designated Broker and/or Dealer. The current redemption fee of the ETF is available upon request.

Allocations of Capital Gains to Redeeming or Exchanging Unitholders

Pursuant to the Declaration of Trust, the ETF may allocate and designate as payable any capital gains realized by the ETF as a result of any disposition of property of the ETF undertaken to permit or facilitate the redemption or exchange of Units to a Unitholder whose Units are being redeemed or exchanged. Any such allocations and designations will reduce the redemption price otherwise payable to the redeeming or exchanging Unitholder. Under related rules in the Tax Act applicable to trusts that are mutual fund trusts for purposes of the Tax Act throughout the taxation year, amounts so allocated and designated to redeeming Unitholders will only be deductible to the ETF to the extent of the redeeming Unitholders' pro rata share (as determined under the Tax Act) of the net taxable capital gains of the ETF for the year. Any such taxable capital gains that would not be deductible by the ETF if allocated to redeeming or exchanging Unitholders may be made payable to non-redeeming or non-exchanging Unitholders of the ETF so that the ETF will not be liable for non-refundable income tax thereon. Accordingly, the amounts and taxable component of distributions to non-redeeming or non-exchanging Unitholders of the ETF may be greater than they would have been in the absence of the above-mentioned rules.

Book-Entry Only System

Registration of interests in, and transfers of, Units of the ETF will be made only through non-certificated interests issued under the book-entry only system of CDS. Units of the ETF must be purchased, transferred and surrendered for redemption only through a CDS Participant. All rights of an owner of Units must be exercised through, and all payments or other property to which such owner is entitled will be made or delivered by CDS or the CDS Participant through which the owner holds such Units. Upon buying Units of the ETF, the owner will receive only the customary confirmation from the registered dealer which is a CDS Participant and from or through which the Units are purchased. References in this prospectus to a holder of Units means, unless the context otherwise requires, the owner of the beneficial interest of such Units.

Neither the ETF nor the Manager will have any liability for: (i) records maintained by CDS relating to the beneficial interests in Units or the book-based entry accounts maintained by CDS; (ii) maintaining, supervising or reviewing any records relating to such beneficial ownership interests; or (iii) any advice or representation made or given by CDS and made or given with respect to the rules and regulations of CDS or any action taken by CDS or at the direction of the CDS Participants.

The ability of a beneficial owner of Units of the ETF to pledge such Units or otherwise take action with respect to such owner's interest in such Units (other than through a CDS Participant) may be limited due to the lack of a physical certificate.

The ETF has the option to terminate registration of Units through the book-entry only system in which case certificates for Units in fully registered form will be issued to beneficial owners of such Units or to their nominees.

Short-Term Trading

Unlike conventional open-end mutual funds in which short term trading by investors may cause the mutual fund to incur additional unnecessary trading costs in connection with the purchase of additional portfolio securities and the sale of portfolio securities to fund Unitholder redemptions, the Manager does not believe that it is necessary to impose any short-term trading restrictions on the ETF at this time as: (i) the ETF is an exchange-traded fund that is primarily traded in the secondary market; and (ii) the few transactions involving Unitholders of the ETF that do not occur on the secondary market involve Designated Brokers and Dealers, who can only purchase or redeem Units in a PNU and on whom the Manager may impose an redemption fee. The redemption fee is intended to compensate the ETF for any costs and expenses incurred by the ETF in order to fund the redemption.

INCOME TAX CONSIDERATIONS

In the opinion of Blake, Cassels & Graydon LLP, the following is, as of the date hereof, a summary of the principal Canadian federal income tax considerations under the Tax Act generally applicable to the acquisition, holding and disposition of Units of the ETF by a Unitholder who acquires Units pursuant to this prospectus. This summary only applies to a prospective Unitholder of the ETF who is an individual (other than a trust) resident in Canada for purposes of the Tax Act, who deals at arm's length with the ETF and the Designated Broker or Dealer and is not affiliated with the ETF or the Designated Broker or Dealer and who holds Units of the ETF as capital property (a "**Holder**").

Generally, Units of the ETF will be considered to be capital property to a Holder provided that the Holder does not hold such Units in the course of carrying on a business of buying and selling securities and has not acquired them in one or more transactions considered to be an adventure or concern in the nature of trade. Certain Holders who might not otherwise be considered to hold Units of the ETF as capital property may, in certain circumstances, be entitled to have such Units and all other "Canadian securities" owned or subsequently acquired by them treated as capital property by making the irrevocable election permitted by subsection 39(4) of the Tax Act. This summary does not apply to a Holder who has entered or will enter into a "derivative forward agreement" as that term is defined in the Tax Act with respect to the Units.

This summary is based on the facts disclosed herein and assumes that at all times the ETF will comply with its investment restrictions, which include not making an investment or conducting any activity that would result in the ETF being subject to the tax for "SIFT trusts" for purposes of the Tax Act. The ETF will be a "SIFT trust" if it holds any "non-portfolio property", which would include property that the ETF (or a person or partnership that does not deal at arm's length with the ETF for purposes of the Tax Act) uses in the course of carrying on a business in Canada.

The CRA has indicated that the characterization of staking rewards as income from property or a business depends on the "level of activity" of the taxpayer in earning that income, and that this determination should be based on an examination of all the circumstances. However, there remains significant uncertainty with respect to the tax treatment of cryptocurrency staking, including the potential application of the SIFT Rules in this context.

The Manager intends to take the position that the ETF (and any person or partnership that does not deal at arm's length with the ETF for purposes of the Tax Act) will not use the ETF's SOL or any other property of the ETF in the course of carrying on a business in Canada and accordingly will not be a SIFT trust. However, no advance income tax ruling has been sought or obtained from the CRA in respect of the status of the ETF under the SIFT Rules, and therefore the CRA could seek to assess or reassess the ETF as a SIFT trust. See "Risk Factors Relating to an Investment in the ETF – Tax Risks – SIFT Rules" for a description of the tax consequences to the ETF and its Unitholders if the ETF is a SIFT trust. The remainder of this summary assumes that the ETF will not be a SIFT trust at any time, although there can be no assurances in this regard.

This summary is also based on the assumption that the ETF will not be subject to tax under section 183.3 of the Tax Act.

This summary is based on the current provisions of the Tax Act, an understanding of the current publicly available administrative policies and assessing practices of the CRA published in writing prior to the date hereof, and certificates of the Manager. This summary takes into account proposed amendments to the Tax Act publicly announced by the Minister of Finance (Canada) prior to the date hereof (the "**Tax Amendments**"). This description is not exhaustive of all Canadian federal income tax consequences and does not take into account or anticipate changes in the law or in administrative policy or assessing practice, whether by legislative, governmental or judicial action other than the Tax Amendments in their present form, nor does it take into account provincial, territorial or foreign tax considerations which may differ significantly from those discussed herein. There can be no assurance that the Tax Amendments will be enacted in the form publicly announced, or at all.

This summary is not exhaustive of all possible Canadian federal income tax considerations applicable to an investment in Units of the ETF. This summary does not address the deductibility of interest on any funds borrowed by an investor to purchase Units of the ETF. The income and other tax consequences of investing in Units will vary depending on an investor's particular circumstances including the province or territory in which the investor resides or carries on business. Accordingly, this summary is of a general nature only and is not intended to be, nor should it be construed to be, legal or tax advice to any investor in Units of the ETF. Prospective investors should consult their own tax advisors with respect to the income tax consequences to them of an acquisition of Units of the ETF based on their particular circumstances.

Status of the ETF

This summary is based on the assumption that the ETF will comply at all material times with the conditions prescribed in the Tax Act and otherwise so as to qualify as a "mutual fund trust" as defined in the Tax Act.

To qualify as a mutual fund trust, (i) the ETF must be a Canadian resident "unit trust" for purposes of the Tax Act, (ii) the only undertaking of the ETF must be (a) the investing of its funds in property (other than real property or interests in real property or an immovable or a real right in an immovable), (b) the acquiring, holding, maintaining, improving, leasing or managing of any real property (or interest in real property) or of any immovable (or real right in immovables) that is capital property of the ETF, or (c) any combination of the activities described in (a) and (b), and (iii) the ETF must comply with certain minimum requirements respecting the ownership and dispersal of Units of a particular series (the "**minimum distribution requirements**"). In this connection, (i) the Manager intends to cause the ETF to qualify as a unit trust throughout the life of the ETF, (ii) the ETF's undertaking conforms with the restrictions for mutual fund trusts, (iii) the Manager intends to file the necessary election so that the ETF will be deemed to qualify as a mutual fund trust from its inception in 2025 and the Manager has no reason to believe that the ETF will not comply with the minimum distribution requirements before the 91st day after the end of its first taxation year (determined without regard to any taxation year-end that may be deemed to occur for other purposes under the rules in the Tax Act relating to "loss restriction events"), thereby permitting the filing by the ETF of such election and at all times thereafter.

If the ETF does not qualify as a mutual fund trust at all times, the income tax considerations described below would, in some respects, be materially and adversely different in respect of that ETF than would be the case if it were a mutual fund trust.

Provided the Units of the ETF are listed on a *"designated stock exchange*" (within the meaning of the Tax Act, which currently includes the TSX) or the ETF qualifies as a *"mutual fund trust*" within the meaning of the Tax Act, Units of that ETF will be qualified investments under the Tax Act for a trust governed by a Registered Plan. See "Income Tax Considerations – Taxation of Registered Plans" for the consequences of holding Units in a trust governed by a Registered Plan.

Taxation of the ETF

The ETF intends to elect to have a taxation year that ends on December 15 of each calendar year. If the ETF has not made such an election, it will have a taxation year that ends on December 31. The ETF must pay tax on its net income (including net realized taxable capital gains) for a taxation year, less the portion thereof that it deducts in respect of the amount paid or payable (or deemed to be paid or payable) to its Unitholders in the calendar year in which the taxation year ends. An amount will be considered to be payable to a Unitholder of the ETF in a calendar year if it is paid to the Unitholder in that year by the ETF or if the Unitholder is entitled in that year to enforce payment of the amount. The Declaration of Trust requires that sufficient amounts be paid or made payable in respect of each taxation year so that the ETF is not liable for any non-refundable income tax under Part I of the Tax Act.

Returns earned by the ETF on its staked SOL will generally be included in the ETF's income for the year when they are credited to the ETF.

In general, the ETF will realize a capital gain (or capital loss) upon the actual or deemed disposition of a security included in its portfolio to the extent the proceeds of disposition, net of any reasonable costs of disposition, exceed (or are less than) the adjusted cost base of such security, unless the ETF were considered to be trading or dealing in securities or otherwise carrying on a business of buying and selling securities or the ETF has acquired the security in a transaction or transactions considered to be an adventure or concern in the nature of trade.

The CRA has stated that gains (or losses) of a taxpayer resulting from transactions in cryptocurrency (which includes SOL and may include other digital assets) should generally be treated for tax purposes as capital gains (or capital losses), unless the gains (or losses) result from carrying on a business or an adventure or concern in the nature of trade. However, the CRA has also stated that it generally treats cryptocurrency like a commodity for purposes of the Tax Act and that gains (or losses) of mutual fund trusts resulting from transactions in commodities should generally be treated for income tax purposes as ordinary income rather than as capital gains, although the treatment in each particular case remains a question of fact to be determined having regard to all the circumstances. As the ETF intends to be a long-term holder of SOL, the

Manager anticipates that the ETF will generally treat gains (or losses) as a result of any disposition of SOL as capital gains (or capital losses) although, depending on the circumstances, the ETF may instead include the full amount in (or deduct the full amount from) income.

The ETF will be entitled for each taxation year throughout which it is a mutual fund trust for purposes of the Tax Act to reduce (or receive a refund in respect of) its liability, if any, for tax on its net realized capital gains by an amount determined under the Tax Act based on the redemptions of Units during the year (the "**Capital Gains Refund**"). The Capital Gains Refund in a particular taxation year may not completely offset the tax liability of the ETF for such taxation year which may arise upon the sale or other disposition of securities included in the portfolio in connection with the redemption of Units.

A loss realized by the ETF on a disposition of capital property will be a suspended loss for purposes of the Tax Act if the ETF, or a person affiliated with the ETF, acquires a property (a "**substituted property**") that is the same as or identical to the property disposed of, within 30 days before and 30 days after the disposition and the ETF, or a person affiliated with the ETF, owns the substituted property 30 days after the original disposition. If a loss is suspended, the ETF cannot deduct the loss from the ETF's capital gains until the substituted property is disposed of and no substituted property is acquired by the ETF, or a person affiliated with the ETF, within 30 days before and after the disposition.

The ETF will enter into transactions denominated in currencies other than the Canadian dollar, including the acquisition of securities in its portfolio. The cost and proceeds of disposition of securities, the amount of any distributions and all other amounts will be determined for the purposes of the Tax Act in Canadian dollars using the appropriate exchange rates determined in accordance with the detailed rules in the Tax Act in that regard. The amount of income, gains and losses realized by the ETF may be affected by fluctuations in the value of foreign currencies relative to the Canadian dollar.

The ETF is entitled to deduct an amount equal to the reasonable expenses that it incurs in the course of issuing Units to the extent they are incurred to earn income (other than taxable capital gains). Such issue expenses paid by the ETF and not reimbursed are deductible by the ETF rateably over a five-year period subject to reduction in any taxation year which is less than 365 days. In computing its income under the Tax Act, the ETF may deduct reasonable administrative and other expenses incurred to earn income (other than taxable capital gains). Aside from the Staking Service Fee and any other expenses to the extent incurred to earn income (other than taxable capital gains), the Manager currently expects that the ETF will generally not deduct expenses.

Losses incurred by the ETF in a taxation year cannot be allocated to Holders but may be deducted by the ETF in future years in accordance with the Tax Act.

Taxation of Holders of the ETF

A Holder will generally be required to include in computing income for a particular taxation year of the Holder such portion of the net income of the ETF, including the taxable portion of any net realized capital gains, as is paid or becomes payable to the Holder in that particular taxation year. If the ETF makes an election to have a taxation year that ends on December 15, amounts paid or payable by the ETF to a Holder after December 15 and before the end of the calendar year will be deemed to have been paid or become payable to the Holder on December 15.

Under the Tax Act, the ETF is permitted to deduct in computing its income for a taxation year an amount that is less than the amount of its distributions of income for the year, to the extent necessary to enable the ETF to use, in that year, losses from prior years without affecting the ability of the ETF to distribute its income annually. In such circumstances, the amount distributed to a Holder of the ETF but not deducted by the ETF will not be included in the Holder's income. However, the adjusted cost base of the Holder's Units of the

ETF will be reduced by such amount. The non-taxable portion of the ETF's net realized capital gains for a taxation year, the taxable portion of which was designated in respect of a Holder in the calendar year in which that taxation year ends, that is paid or becomes payable to the Holder in the calendar year in which that taxation year ends will not be included in computing the Holder's income for the year. Any other amount in excess of a Holder's share of the net income of the ETF for a taxation year that is paid or becomes payable to the Holder in the calendar year in which that taxation year ends (i.e., returns of capital) will not generally be included in the Holder's income for the year, but will reduce the adjusted cost base of the Holder's Units of the ETF. To the extent that the adjusted cost base of Units of the ETF to a Holder would otherwise be a negative amount, the negative amount will be deemed to be a capital gain and the adjusted cost base of the Units to the Holder will be increased by the amount of such deemed capital gain to zero.

Provided that appropriate designations are made by the ETF, such portion of the net realized taxable capital gains of the ETF as is paid or becomes payable to a Holder will effectively retain its character and be treated as such in the hands of the Holder for purposes of the Tax Act.

Any loss of the ETF for purposes of the Tax Act cannot be allocated to, and cannot be treated as a loss of, a Holder.

On the disposition or deemed disposition of a Unit of the ETF, including on a redemption, a Holder will realize a capital gain (or capital loss) to the extent that the Holder's proceeds of disposition (which do not include any amount of capital gains payable by the ETF to the Holder which represents capital gains realized by the ETF in connection with dispositions to fund the redemption), net of any reasonable costs of disposition, exceed (or are less than) the adjusted cost base of the Unit. For the purpose of determining the adjusted cost base of a Holder's Units of a particular series of the ETF, when additional Units of that series of the ETF are acquired by the Holder, the cost of the newly acquired Units of that series of the ETF will be averaged with the adjusted cost base of all Units of the same series of the ETF owned by the Holder as capital property immediately before that time. For this purpose, the cost of Units that have been issued on a distribution will generally be equal to the amount of the distribution. A consolidation of Units of the ETF following a distribution paid in the form of additional Units of the ETF will not be regarded as a disposition of Units of the ETF and will not affect the aggregate adjusted cost base to a Holder of Units of that series of that particular ETF.

In the case of an exchange of Units for cash and portfolio assets, a Holder's proceeds of disposition of Units would generally be equal to the aggregate of the fair market value of the distributed assets and the amount of any cash received. The cost to a Holder of any assets received from the ETF upon the exchange will generally be equal to the fair market value of such assets at the time of the distribution. In the case of an exchange of Units for cash and portfolio assets, the Holder may receive assets that are not qualified investments under the Tax Act for Registered Plans. If such assets are not qualified investments for Registered Plans, such Registered Plans (and, in the case of certain Plans, the annuitants, beneficiaries or subscribers thereunder or Holders thereof) may be subject to adverse tax consequences. See "Taxation of Registered Plans".

Pursuant to the Declaration of Trust, the ETF may allocate and designate as payable any capital gains realized by the ETF as a result of any disposition of property of the ETF undertaken to permit or facilitate the redemption or exchange of Units to a Holder whose Units are being redeemed or exchanged. Any such allocations and designations will reduce the redemption price otherwise payable to the Holder and therefore the Holder's proceeds of disposition. Under related rules in the Tax Act, amounts of capital gain so allocated and designated to redeeming Holders will be deductible to the ETF to the extent of the redeeming Holders' pro rata share (as determined under the Tax Act) of the net taxable capital gains of the ETF for the year. Any such taxable capital gains that would not be deductible by the ETF if allocated to redeeming or exchanging Holders may be made payable to non-redeeming or non-exchanging Holders of the ETF so that the ETF will not be liable for non-refundable income tax thereon. Accordingly, the amounts and taxable component of distributions to non-redeeming or non-exchanging Holders of the ETF may be greater than they would have been in the absence of the rules described above.

In general, one-half of any capital gain (a "**taxable capital gain**") realized by a Holder on the disposition of Units of the ETF or a taxable capital gain designated by the ETF in respect of the Holder in a taxation year of the Holder will be included in computing the Holder's income for that year and one-half of any capital loss (an "**allowable capital loss**") realized by the Holder in a taxation year of the Holder must be deducted from taxable capital gains realized by the Holder in the taxation year or designated by the ETF in respect of the Holder in the taxation year in accordance with the detailed provisions of the Tax Act. Allowable capital losses for a taxation year in excess of taxable capital gains for that taxation year may be carried back and deducted in any of the three preceding taxation years or carried forward and deducted in any subsequent taxation year against net taxable capital gains in accordance with the provisions of the Tax Act.

Amounts designated by the ETF to a Holder of the ETF as taxable capital gains and taxable capital gains realized on the disposition of Units of the ETF may increase the Holder's liability for alternative minimum tax.

Composition of Distributions

Unitholders will be informed each year of the composition of the amounts distributed to them. This information will indicate whether distributions are to be treated as ordinary income, taxable capital gains and returns of capital, as those items are applicable.

Tax Implications of the ETF's Distribution Policy

The NAV per Unit of the ETF will, in part, reflect income and capital gains that the ETF has accrued or realized, but not yet paid out as a distribution. Accordingly, an investor who acquires Units of the ETF at any time in the year, but prior to a distribution being paid or made payable will have to pay tax on the entire distribution (to the extent it is a taxable distribution) notwithstanding that such amounts may have been reflected in the price paid by the investor for the Units. Further, if the ETF has elected to have a taxation year ending on December 15 of each calendar year and an investor acquires Units in a calendar year after December 15 of such year, such investor may become taxable on income earned or capital gains realized in the taxation year ending on December 15 of such calendar year but that had not been made payable before the Units were acquired.

Taxation of Registered Plans

In general, the amount of a distribution paid or payable to a Registered Plan from the ETF and gains realized by a Registered Plan on a disposition of a Unit will not be taxable under the Tax Act. As is the case for all investments held in Registered Plans, amounts withdrawn from a Registered Plan (other than from a TFSA, "qualifying withdrawals" from a FHSA, a return of contributions from an RESP or certain withdrawals from an RDSP) will generally be subject to tax. To the extent Units of the ETF are exchanged or redeemed by a Holder for SOL, or liquidation of SOL of the ETF is not practicable upon termination of the ETF, any SOL received by the Holder would not be a qualified investment for Registered Plans.

Notwithstanding the foregoing, the holder of a TFSA, FHSA or RDSP, the annuitant under an RRSP or RRIF or the subscriber of an RESP will be subject to a penalty tax in respect of Units held by such TFSA, FHSA, RRSP, RDSP, RESP or RRIF, as the case may be, if such Units are a "prohibited investment" for such TFSA, FHSA, RRSP, RDSP, RESP or RRIF for the purposes of the Tax Act. The Units of the ETF will not be a "prohibited investment" for a trust governed by a TFSA, FHSA, RRSP, RDSP, RESP or RRIF unless the holder of the TFSA, FHSA or RDSP, the annuitant under the RRSP or RRIF or the subscriber of the RESP, as applicable, (i) does not deal at arm's length with the ETF for purposes of the Tax Act, or (ii) has a "significant interest" as defined in the Tax Act in the ETF. Generally, a holder, annuitant or subscriber, as the case may be, will not have a significant interest in the ETF unless the holder, annuitant or subscriber, as the case may be, owns Units of the ETF that have a fair market value of 10% or more of the fair market value of all Units of the ETF, either alone or together with persons and partnerships with which the holder, annuitant or subscriber, as the case may be, does not deal at arm's length. In addition, the Units of the ETF will not be a prohibited investment if such Units are "excluded property" as defined in the Tax Act for a trust governed by a TFSA, FHSA, RRSP, RDSP, RESP or RRIF.

Holders should consult with their own advisors regarding the tax implications of establishing, amending, terminating or withdrawing amounts from a Registered Plan. Holders, annuitants or subscribers should consult their own tax advisors with respect to whether Units of the ETF would be prohibited investments, including with respect to whether such Units would be excluded property.

EXCHANGE OF TAX INFORMATION

The ETF is required to comply with due diligence and reporting obligations in the Tax Act enacted to implement the Canada-United States Enhanced Tax Information Exchange Agreement. As long as Units of a series of the ETF are and continue to be listed on the TSX, the ETF should not have any U.S. reportable accounts and, as a result, it should not be required to provide information to the CRA in respect of Unitholders. However, dealers through which Unitholders hold the Units are subject to due diligence and reporting obligations with respect to financial accounts that they maintain for their clients. Unitholders may be requested to provide information to their dealer in order to allow the dealer to identify U.S. persons holding Units. If a Unitholder is a U.S. person (including a U.S. citizen or green card holder who is resident in Canada) or if the Unitholder does not provide the requested information, the Unitholder's dealer will be required under Part XVIII of the Tax Act to report certain information to the CRA about such Unitholder's investment in the ETF, unless the Units are held by a Registered Plan. The CRA is expected to provide that information to the U.S. Internal Revenue Service.

In addition, reporting obligations in the Tax Act which came into force on July 1, 2017, have implemented the Organization for Economic Co-operation and Development's (the "**OECD**") Common Reporting Standard (the "**CRS Rules**"). Pursuant to and in order to meet the objectives of the CRS Rules, Canadian financial institutions are required to have procedures in place to identify accounts held by residents of foreign countries which have agreed to a bilateral information exchange with Canada under the CRS (the "**Participating Jurisdictions**"), or by certain entities any of whose "controlling persons" are resident in a Participating Jurisdiction, and to report the required information to the CRA. Such information will be exchanged on a reciprocal, bilateral basis with the Participating Jurisdictions in which the Unitholders, or such controlling persons, are resident. Under the CRS Rules, Unitholders will be required to provide the required information regarding their investment in the ETF to the Unitholder's dealer for the purpose of the information exchange, unless the Units are held by a Registered Plan.

ORGANIZATION AND MANAGEMENT DETAILS OF THE ETF

Manager

CI GAM, a registered investment fund manager and portfolio manager, is the promoter, trustee and manager of the ETF. The Manager's principal office is located at 15 York Street East, Second Floor, Toronto, Ontario M5J 0A3. CI Global Asset Management is a registered business name of CI Investments Inc. The Manager is a wholly-owned subsidiary of CI Financial Corp., which is listed on the TSX (TSX:CIX). On November 25, 2024, CI Financial Corp. announced that it had entered into a definitive agreement with an affiliate of Mubadala Capital, the alternative asset management arm of Mubadala Investment Company, to acquire all issued and outstanding common shares of CI Financial Corp., other than shares held by members of senior management of CI Financial Corp. who enter into equity rollover agreements. Subject to court and shareholder approvals, regulatory clearances and other customary closing conditions, the transaction is expected to close in the second quarter of 2025. The Manager does not expect the transaction to impact it or the ETF's business, operations or affairs at this time.

The Manager is responsible for providing or arranging for the provision of administrative services and management functions to, including the day-to-day management of the ETF. The Manager receives the Management Fee.

Duties and Services to be Provided by the Manager

Under an amended and restated master management agreement dated July 14, 2023, as amended, (the "**Management Agreement**") that the Manager has entered into with the ETF, the Manager is responsible for managing the investment portfolio of the ETF. The schedule to the Management Agreement may be amended from time to time to add or delete a fund or to add or delete a series of units.

The Management Agreement with the ETF permits the Manager to resign as manager of the ETF after giving 60 days' notice to the trustee of the ETF.

The Management Agreement permits investors to end the agreement if such resolution is approved by at least 66 2/3% of the votes cast at a meeting of Unitholders called for that purpose by the trustee. To be valid, at least 33% of the Units held by Unitholders must be represented at the meeting.

Pursuant to the Management Agreement, the Manager provides and arranges for the provision of investment advisory and portfolio management services and required administrative services to the ETF. The Manager provides office facilities and personnel to carry out these services, if not otherwise furnished by any other service provider to the ETF. The Manager also monitors the investment strategy of the ETF to ensure that the ETF complies with its investment objective, investment strategy and investment restrictions and practices.

Pursuant to the Management Agreement, the Manager has full authority and responsibility to manage and direct the business and affairs of the ETF, to make all decisions regarding the business of the ETF and to bind the ETF. The Manager may delegate certain of its powers to third parties where, in the discretion of the Manager, it would be in the best interests of the ETF to do so.

The Manager is required to exercise its powers and discharge its duties honestly, in good faith and in the best interests of the Unitholders, and to exercise the care, diligence and skill that a reasonably prudent person would exercise in comparable circumstances. The Management Agreement provides that the Manager will not be liable to the ETF or to any Unitholder or any other person for any loss or damage relating to any matter regarding the ETF, including any loss or diminution of value of the assets of the ETF if it has satisfied its standard of care set forth above.

The Manager may be indemnified out of the assets of the ETF from and against all claims whatsoever, including costs, charges and expenses in connection therewith, brought, commenced or prosecuted against it for or in respect of any act, deed, matter or thing whatsoever made, done, acquiesced in or omitted in or about or in relation to the execution of its duties as Manager to the ETF and the execution of its duties by any persons appointed by it as long as the Manager or the person acted honestly and in good faith with a view to the best interests of the ETF.

The Manager is entitled to fees for its services as manager under the Management Agreement as described under "Fees and Expenses".

Officers and Directors of the Manager

The following is a list of individuals who are the directors and executive officers of the Manager:

Name and Municipality of Residence	Position with the Manager	Principal Occupation in the last five years
Marc-André Lewis Toronto, Ontario	Director, President, Chief Investment Officer and Ultimate Designated Person	Director, President, Ultimate Designated Person (since June 2024), and Chief Investment Officer, CI GAM, since September 2023. Head of Portfolio Construction, Abu Dhabi Investment Authority, from August 2013 to June 2021.
Yvette Zhang Toronto, Ontario	Director and Chief Financial Officer	Director and Chief Financial Officer, CI GAM, since October 2022.
Elsa Li Toronto, Ontario	Director, Senior Vice-President and General Counsel, and Corporate Secretary	Director (since October 2022), Senior Vice-President and General Counsel (since March 2022), and Corporate Secretary, CI GAM, since March 2017.
Ethan Feldman Toronto, Ontario	Chief Operating Officer	Chief Operating Officer, CI GAM, since January 2024. Senior Vice President, Investments & Operations (from January 2023 to December 2023) and Vice President, Investments & Operations, CI Financial Corp., from February 2021 to December 2022. Project Leader (from July 2020 to January 2021) and Consultant (from July 2018 to June 2020), Boston Consulting Group.
Jennifer Sinopoli Ottawa, Ontario	Executive Vice-President, Head of Distribution	Executive Vice-President, Head of Distribution, CI GAM, since July 2023. Assistant Branch Manager, RBC Dominion Securities, from January 2020 to September 2020.

Name and Municipality of Residence	Position with the Manager	Principal Occupation in the last five years
Geraldo Ferreira Toronto, Ontario	Senior Vice-President, Investment and Product Management	Senior Vice-President, Investment and Product Management, CI GAM, since January 2021.
William Chinkiwsky Toronto, Ontario	Senior Vice-President, Compliance and Chief Compliance Officer	Senior Vice-President, Compliance (since December 2023), and Chief Compliance Officer, CI GAM, since February 2021. Head, Global Asset Management Compliance, Bank of Montreal, from October 2012 to February 2021.

Except where another company is disclosed above, all directors and executive officers have held position(s) with CI GAM for the last five (5) consecutive years. Where a director or executive officer has held multiple positions with CI GAM or another company for the last five (5) consecutive years, the above table generally sets out only the current or most recently-held position(s) held at such company. The start date for each position generally refers to the date on which the director or executive officer commenced the applicable position(s).

Subadvisor

Galaxy Digital Capital Management LP acts as the subadvisor for the ETF (the "**Subadvisor**"). The Subadvisor is incorporated under the laws of the Cayman Islands and its head office is located at 300 Vesey Street, 13th Floor, New York, NY, 10282.

The Subadvisor is an affiliate of Galaxy Digital Holdings Ltd. (**"Galaxy Digital**"). Galaxy Digital is seeking to build a full service, institutional-quality merchant banking business in the cryptocurrency and blockchain space. Currently, Galaxy Digital intends to capitalize on market opportunities made possible by the ongoing evolution of cryptocurrencies and blockchain-based assets through three primary business lines: Global Markets, Asset Management and Digital Infrastructure Solutions. Galaxy Digital may add or discontinue business lines at any time and expects its business to continually evolve given the rapidly developing cryptocurrency space.

Michael Novogratz

Mr. Novogratz is the Founder and Chief Executive Officer of Galaxy Digital. He was formerly a Partner and President of Fortress Investment Group LLC ("**Fortress**"). Prior to Fortress, Mr. Novogratz spent 11 years at Goldman Sachs, where he was elected Partner in 1998. Mr. Novogratz served on the New York Federal Reserve's Investment Advisory Committee on Financial Markets from 2012-2015. Mr. Novogratz serves as the Chairman of The Bail Project and has made criminal justice reform a focus of his family's foundation. He also sits on the Board of Overseers at NYU Langone Medical Center and is a board member of Princeton

Varsity Club and Jazz Foundation of America. Mr. Novogratz received an A.B. degree in Economics from Princeton University and served as a helicopter pilot in the US Army.

Steve Kurz

Mr. Kurz is Partner and Global Head of Asset Management for the Subadvisor. A member of the Subadvisor's founding team, Steve launched and oversees its asset management business. Before joining the firm, he co-founded Outer Realm, an enterprise-focused immersive software company (sold in 2022). Previously, he was a Principal and Head of Business Development at River Birch Capital, where he led global capital formation efforts. Prior to that, he was a Vice President at Fortress Investment Group, where he held strategy, product specialist, and capital formation roles in New York and Singapore. He started his career as a Capital Markets Analyst in the Fixed Income Division of Lehman Brothers. He holds a B.A. in Economics from Cornell University. He also serves as a Term Member of the Council on Foreign Relations.

Paul Cappelli

Mr. Cappelli is currently the Portfolio Manager for the ETF and is primarily responsible for the day-to-day management of the ETF's portfolio. Mr. Cappelli joined the Subadvisor in 2017. Prior to that, Mr. Cappelli was a Director of Fixed Income at State Street Global Advisors ("**SSGA**") working in capital markets for their ETF business. Prior to joining SSGA, Mr. Cappelli was a Director in High Yield sales and trading at Oppenheimer. Mr. Cappelli started his career at HSBC as a Foreign Exchange Analyst before spending nearly 10 years at Citigroup in fixed income sales and trading. Mr. Cappelli is a member of the Monogram Club at the University of Notre Dame where he won a Monogram as member of the Men's Lacrosse Team from 2000-2004. Mr. Cappelli is also a supporter of A Walk on Water, which promotes therapy through surfing. Mr. Cappelli holds a B.A. in Political Science from the University of Notre Dame.

Details of the Subadvisor Agreement

The Subadvisor provides its services to the ETF pursuant to a subadvisor agreement dated March 5, 2021, as amended (the "**Subadvisor Agreement**") entered into between the ETF, the Manager and the Subadvisor.

Pursuant to the Subadvisor Agreement, the Subadvisor will manage the assets held by the ETF in accordance with its investment objective and investment strategy and subject to applicable investment restrictions. The Subadvisor agrees to discharge its duties honestly, in good faith and in the best interests of the ETF and, in connection therewith, it shall exercise the degree of care, diligence and skill that a reasonably prudent person would exercise in comparable circumstances. The Subadvisor Agreement provides that it may be terminated by either party if the other party commits certain acts or fails to perform its duties under the agreement. The Subadvisor Agreement also provides that the agreement will automatically terminate in the event of certain circumstances. In consideration for the services provided by the Subadvisor pursuant to the Subadvisor Agreement, the Subadvisor is paid a fee by the Manager out of the Management Fee payable by the ETF.

As further described under "Risk Factors – Risk Factors Relating to SOL – Network Forks", in the event of a fork, the ETF will hold SOL, the new alternative, or both, based on the Subadvisor's sole discretion as to whether the new alternative is an appropriate medium for investment. The Subadvisor will retain full discretion as it relates to the handling of forks.

Brokerage Arrangements

The portfolio manager is responsible for selecting members of securities exchanges, brokers and investment dealers for the execution of transactions in respect of the ETF's investments and, when applicable, the negotiation of commissions in connection therewith. The ETF is responsible to pay any commissions negotiated in relation to these brokerage arrangements, except where prohibited by applicable law. The portfolio manager has established policies and procedures for selecting markets, brokers and investment dealers for the execution of transactions in respect of the ETF's investments and for seeking to obtain the best price and execution for those transactions.

In addition, the portfolio manager may, consistent with its duty to seek best price and execution, utilize the services of soft dollar brokerage firms. A portion of the commissions generated through the use of soft dollar brokerage accounts are used to pay for order execution and research goods and services which may include, but are not limited to, order management systems, trading software and raw market data, custody, clearance and settlement services, databases, analytical software and research reports. The order execution and research goods and services may be provided directly from the soft dollar brokerage firm, or indirectly from a third party.

The name of any broker or third party that provides research and/or order execution goods and services through a soft dollar arrangement with the Manager will be provided upon request by contacting the Manager at 1-800-792-9355 or by e-mail at service@ci.com.

Conflicts of Interest

The Manager and the Subadvisor and their affiliates are engaged in a wide range of investment management, investment advisory and other business activities. The services provided by the Manager under the Management Agreement and the Subadvisor under the Subadvisor Agreement are not exclusive and nothing in the agreement prevents the Manager or the Subadvisor or any of their affiliates from providing similar services to other investment funds or clients (whether or not their investment objectives, strategies and policies are similar to those of the ETF) or from engaging in other activities. The Manager and the Subadvisor therefore will have conflicts of interest in allocating management time, services and functions to the ETF and the other persons for which they provide similar services. The Manager's and the Subadvisor's investment decisions for the ETF will be made independently of those made on behalf of their other clients or for their own investments. On occasion, however, the Manager and the Subadvisor will make the same investment for the ETF and for one or more of their other clients. If the ETF and one or more of the other clients of the Manager or the Subadvisor or any of their affiliates are engaged in the purchase or sale of the same assets, the transactions will be effected on an equitable basis. In this regard, the Manager and the Subadvisor will generally endeavour to allocate investment opportunities to the ETF on a pro rata basis.

The Manager and the Subadvisor may trade and make investments for their own accounts, and the Manager and the Subadvisor may trade and manage accounts other than the ETF's account utilizing trading and investment strategies which are the same as or different from the ones to be utilized in making investment decisions for the ETF. In addition, in proprietary trading and investment, the Manager or the Subadvisor may take positions the same as, different than or opposite to those of the ETF.

The Manager has established policies and procedures relating to conflicts of interest. The Manager has adopted CI Financial Corp.'s Code of Conduct, CI Conflicts Policy and CI Personal Trading Policy (the "**Codes**"), which establish rules of conduct designed to ensure fair treatment of the Unitholders and to ensure that at all times the interests of the ETF and the Unitholders are placed above personal interests of employees, officers and directors of the Manager, and each of its subsidiaries, affiliates and portfolio subadvisors. The Codes apply the highest standards of integrity and ethical business conduct. The objective is not only to remove any potential for real conflict of interest, but also to avoid any perception of conflict. The Codes address the area of investments, which covers personal trading by employees, conflict of interest, and confidentiality among departments and portfolio subadvisors. They also address confidentiality, fiduciary duty, enforcement of rules of conduct and sanctions for violations.

The Manager may at times have interests that differ from the interests of the Unitholders. Where the Manager or its affiliates otherwise perceive in the course of business, that they are or may be in a material conflict of interest position, the matter will be referred to the IRC. The IRC will consider all matters referred to it and provide its recommendations to the Manager as soon as possible.

In evaluating these conflicts of interest, potential investors should be aware that the Manager has a responsibility to the Unitholders to exercise good faith and fairness in all dealings affecting the ETF. In the event that a Unitholder believes that the Manager has violated its duty to such Unitholder, the Unitholder may seek relief for itself or on behalf of the ETF to recover damages from or to require an accounting by the Manager. Unitholders should be aware that the performance by the Manager of its responsibilities to the ETF will be measured in accordance with (i) the provisions of the agreement by which the Manager has been appointed to its position with the ETF; and (ii) applicable laws.

A registered dealer acts as a Designated Broker, and one or more registered dealers may act as a Dealer and/or a market maker. These relationships may create actual or perceived conflicts of interest which investors should consider in relation to an investment in the ETF. In particular, by virtue of these relationships, these registered dealers may profit from the sale and trading of Units. The Designated Broker, as market maker of the ETF in the secondary market, may therefore have economic interests which differ from and may be adverse to those of Unitholders.

Any such registered dealer and its affiliates may, at present or in the future, engage in business with the ETF, the issuers of Units making up the investment portfolio of the ETF, or with the Manager or any funds sponsored by the Manager or its affiliates, including by making loans, entering into derivative transactions or providing advisory or agency services. In addition, the relationship between any such registered dealer and its affiliates, and the Manager and its affiliates may extend to other activities, such as being part of a distribution syndicate for other funds sponsored by the Manager or its affiliates.

No Designated Broker or Dealer has been involved in the preparation of this prospectus or has performed any review of the contents of this prospectus. The applicable Designated Broker and Dealers do not act as underwriters of the ETF in connection with the distribution of Units under this prospectus. Units of the ETF do not represent an interest or an obligation of any Designated Broker, any Dealer or any affiliate thereof, and a Unitholder does not have any recourse against any such parties in respect of amounts payable by the ETF to the applicable Designated Broker or Dealers. The Canadian securities regulators have provided the ETF with a decision exempting the ETF from the requirement to include a certificate of any underwriter in the prospectus.

Independent Review Committee

NI 81-107 requires the ETF to establish an IRC to whom the Manager must refer conflict of interest matters for review or approval. NI 81-107 also imposes obligations upon the Manager to establish written policies and procedures for dealing with conflict of interest matters, maintain records in respect of these matters and provide assistance to the IRC in carrying out its functions. The IRC will be required to conduct regular assessments and provide reports to the Manager and to Unitholders in respect of its functions.

The IRC members are entitled to be compensated by the ETF and reimbursed for all reasonable costs and expenses incurred in relation to the duties they perform as IRC members, which are typically nominal and associated with travel and the administration of meetings. In addition, the members of the IRC are entitled to be indemnified by the ETF, except in cases of wilful misconduct, bad faith, negligence, or breach of their standard of care.

Set out below is a list of the individuals who comprise the IRC for the ETF:

- Karen Fisher (Chair)
- Thomas A. Eisenhauer (Member)
- Donna E. Toth (Member)
- James McPhedran (Member)
- John Sheedy (Member)

Each member of the IRC is independent of the Manager, the Manager's affiliates and the ETF. The IRC provides independent oversight and impartial judgment on conflicts of interest involving the ETF. Its mandate is to consider matters relating to conflicts of interest and recommend to the Manager what action the Manager should take to achieve a fair and reasonable result for the ETF in those circumstances; and to review and advise on or consent to, if appropriate, any other matter required by the Declaration of Trust and by applicable securities laws, regulations and rules. The IRC meets at least quarterly.

The IRC prepares a report, at least annually, of its activities for Unitholders which will be available on the ETF's website at www.ci.com, or at the Unitholder's request at no cost, by contacting the Manager at service@ci.com.

The IRC members perform a similar function as the IRC for other investment funds managed by the Manager or the Manager's affiliates. The Chair of the IRC is paid $88,000 annually and each member other than the Chair is paid $72,000. Members of the IRC are also paid a meeting fee of $1,500 per meeting after the sixth meeting attended and are reimbursed for their expenses, which are typically nominal and associated with travel and the administration of meetings. Their annual fees are allocated across all investment funds managed by the Manager with the result that only a small portion of such fees were allocated to any particular fund.

As of April 9, 2025, the members of the IRC did not beneficially own, directly or indirectly, in aggregate, (i) any issued and outstanding Units of the ETF, (ii) any class or series of voting or equity securities of the Manager, or (iii) any material amount of any class or series of voting or equity securities of any material service provider to the ETF or to the Manager.

Liquidity Risk Oversight Committee

The Manager has established a Liquidity Risk Oversight Committee for the ETF, which is responsible for the oversight of policies and procedures related to liquidity risk management and is part of the Manager's broader risk management process. The committee members include representatives from capital markets, operations, compliance, risk management, investments and product development.

Trustee

CI GAM is the trustee of the ETF pursuant to the Declaration of Trust (in such capacity, the "**Trustee**").

As trustee for the ETF, the Trustee controls and has authority over the ETF's investments and cash in trust on behalf of the Unitholders of the ETF. The Trustee does not receive any additional fees for serving as trustee.

Custodian

Cidel Trust Company ("**Cidel Custodian**") is the custodian of the assets of the ETF. Cidel Custodian is a federally regulated trust company based in Calgary, Alberta and provides services to the ETF from its office in Toronto, Ontario. Cidel Custodian is a wholly-owned subsidiary of Cidel Bank Canada, a Schedule II Bank regulated by the Office of the Superintendent of Financial Institutions. Cidel Custodian is responsible for safekeeping of all the investments and other assets of the ETF delivered to it (but not those assets of the ETF not directly controlled or held by Cidel Custodian, as the case may be). Cidel Custodian may appoint sub-custodians from time to time in accordance with NI 81-102. Cidel Custodian is independent of the Manager.

The Manager, on behalf of the ETF, or Cidel Custodian may terminate the amended and restated custodianship agreement dated March 17, 2023 between the Manager and Cidel Custodian as it may be amended from time to time (the **"Cidel Custodian Agreement**") upon at least 120 days' written notice. The Manager, on behalf of the ETF, may terminate the Cidel Custodian Agreement immediately: (a) in the event Cidel Custodian, in the reasonable opinion of the Manager, fails to comply with or be qualified to act as custodian under NI 81-102; (b) if an order is made or an effective resolution is passed for the winding up, dissolution or liquidation of Cidel Custodian; or (c) if Cidel Custodian becomes bankrupt or insolvent or makes a general assignment for the benefit of its creditors or a receiver is appointed in respect of Cidel Custodian or a substantial portion of its assets. Cidel Custodian may terminate the Cidel Custodian Agreement on 30 days' written notice to the ETF in the event that Cidel Custodian has delivered a termination notice, or is entitled to deliver a termination notice, to a Sub-Custodian under the applicable Sub-Custodian Agreement. Cidel Custodian is entitled to receive fees from the ETF as described under "Fees and Expenses – Operating Expenses" and to be reimbursed for all reasonable expenses and liabilities that are properly incurred by Cidel Custodian in connection with the activities of the ETF.

Cidel Custodian, in carrying out its duties concerning the safekeeping of, and dealing with, the portfolio assets of the ETF, is required to exercise (a) the degree of care, diligence and skill that a reasonably prudent person would exercise in the circumstances; or (b) at least the same degree of care as they exercise with respect to their own property of a similar kind, if this is a higher degree of care than the degree of care referred to in (a).

Sub-Custodians

Gemini Trust Company, LLC ("**Gemini**"), along with Coinbase, Inc. and Coinbase Custody Trust Company, LLC ("**Coinbase Custody**" and together with Coinbase, Inc. "**Coinbase**"), act as sub-custodians of the ETF in respect of the ETF's holdings of SOL pursuant to the sub-custodian agreement dated March 3, 2021 among Cidel Custodian, the ETF and Gemini, amongst others, as it may be amended from time to time (the "**Gemini Sub-Custodian Agreement**") and the sub-custodian agreement dated March 21, 2023 among the Manager, Cidel Custodian, and Coinbase as it may be amended from time to time (the "**Coinbase Sub-Custodian Agreement**"), respectively. Gemini and Coinbase Custody are trust companies licensed and regulated by the New York State Department of Financial Services and are qualified to act as sub-custodians of the ETF for assets held outside of Canada in accordance with NI 81-102. Each Sub-Custodian operates in the U.S., Canada and certain other international jurisdictions.

Each Sub-Custodian is held to specific capital reserve requirements and banking compliance standards. Each Sub-Custodian is also subject to the laws, regulations and rules of applicable governmental or regulatory authorities, including but not limited to: money service business regulations under the Financial Crimes Enforcement Network ("**FinCEN**"); certain U.S. state money transmission laws; laws, regulations, and rules of relevant tax authorities; applicable regulations and guidance set forth by FinCEN; the Bank Secrecy Act of 1970; the USA Patriot Act of 2001; AML Regulations as mandated by U.S. federal law and any other rules and regulations regarding anti-money laundering/counter-terrorist financing; issuances from the Office of Foreign Assets Control; the New York Banking Law; and regulations promulgated by the New York State Department of Financial Services from time to time.

The Sub-Custodians use segregated cold storage SOL addresses for the ETF which are separate from the SOL addresses that the Sub-Custodians use for their other customers, and which are directly verifiable via the applicable SOL blockchain. The Sub-Custodians at all times record and identify in their books and records that such SOL constitute the property of the ETF. The Sub-Custodians do not loan, hypothecate, pledge or otherwise encumber the ETF's SOL without their instruction. The Sub-Custodians, in carrying out their duties concerning the safekeeping of, and dealing with the ETF's SOL, are required to take reasonable care and use commercially reasonable efforts in executing its responsibilities under the respective Sub-Custodian Agreement, and have agreed to adhere to the standard of care required by law, including NI 81-102.

The Manager and/or Cidel Custodian may appoint additional sub-custodians from time to time in accordance with NI 81-102.

SOL Storage, Security Policies and Practices

SOL private keys are stored in two different forms: "hot wallet" storage, whereby the private keys are connected to the internet, and "cold" storage, where private keys are stored completely offline. SOL that a Sub-Custodian holds for the ETF will generally be stored offline in cold storage. However, SOL will enter "hot" storage to facilitate deposits and withdrawals of SOL to and from the ETF's custody account, meaning that SOL will only be in "hot" storage for a temporary period.

Gemini

Gemini has adopted the following security policies and practices with respect to digital assets held in hot wallets: HSMs are used to store and manage hot wallet private keys; operational redundancy is achieved through geographic disbursement of failover storage facilities and hardware, thus protecting against service disruptions and single points of failure; all hot wallet HSMs are stored within secured facilities that are access-controlled, guarded, and monitored; tiered access-controls are applied to Gemini's production environment to restrict access to employees based on role, following the principle of least-privilege; administrative access to its production environment requires multi-factor authentication; and it offers additional account level protections such as crypto address whitelisting, which allows customers to restrict withdrawals to addresses only included in the customer's whitelist.

Coinbase

Coinbase has adopted the following security policies and practices with respect to digital assets held in vault storage: digital asset wallets are generated during offline key generation ceremonies using secure hardware that is procured specifically to support key generation ceremonies; during the key generation ceremony, wallet private keys are split into multiple encrypted key shares and these encrypted wallet key shares are then stored using a combination of offline storage within Coinbase's dedicated secure storage facilities and online storage within secure, isolated online systems; these encrypted wallet key shares require cryptographic consensus to be achieved in order to sign a wallet transaction; disaster recovery key materials are produced and stored across Coinbase's geographically redundant secure storage facilities; and secure storage facilities are closely guarded, monitored, and access-controlled. Overall, Coinbase's approach to key management and security helps to mitigate the risk of single points of failure or compromise.

Coinbase has also adopted the following security policies and practices with respect to digital assets held in its online wallet: secure cloud-based HSM resources are used to store and manage online wallet private keys; operational redundancy is achieved through ongoing replication and periodic backups across multiple availability zones and regions; no standing human access to hot wallets, and any access requires additional approval; all activities logged are reviewed and closely monitored; Coinbase's production environment at large follows the principle of least-privilege, and all access requires the employees to be on Coinbase's network via VPN and adhere to enforced multi-factor authentication; and Coinbase offers additional account level protections such as crypto address whitelisting which allows customers to restrict withdrawals to addresses only included in the customer's whitelist.

BSA/AML Program

Each Sub-Custodian has adopted a respective risk-based BSA/AML Program for its digital asset exchange and custody service to comply with applicable laws and regulations relating to anti-money laundering in the United States and other countries where it conducts business. Each Sub-Custodian's respective program includes internal policies, procedures and controls that combat the attempted use of a Sub-Custodian for illegal or illicit purposes, including (i) a KYC program or customer identification program, as applicable, based on the licensure of the Sub-Custodian; (ii) annual training of all employees and officers in AML Regulation, including training on the identification of suspicious activity and filing of Suspicious Activity Reports, as applicable, with FinCEN; and (iii) annual internal and/or independent audits of the BSA/AML Program.

Website Security

Each Sub-Custodian has implemented certain security policies and practices to enhance security on its website, including through the use of two-factor authentication for certain user actions, such as withdrawals; a requirement for strong passwords from its users, which are cryptographically hashed using modern standards; encryption of sensitive user information, both in transit and at rest; the application of rate-limiting procedures to certain account operations such as login attempts to thwart brute force attacks; the transmission of website data over encrypted transport layer security connections; the leveraging of content-security policy and HTTP strict transport security features in modern browsers; partnerships with enterprise vendors to mitigate potential distributed denial-of-service attacks; and the use of separate access controls on internal-only sections of the Sub-Custodian's website.

Internal Controls

In addition to the security policies and procedures discussed above, each Sub-Custodian has also instituted the following internal controls:

For Gemini, multiple signatories are required to transfer SOL out of cold storage; no single individual, including Gemini's Chief Executive Officer and President, can individually or jointly transfer funds out of cold storage; all private keys are stored offsite in secure, guarded and geographically distributed facilities; all employees undergo criminal and credit background checks, and are subject to ongoing background checks throughout their employment; and all remote-access by employees uses public-key authentication (e.g., no passwords, one-time passwords or other phishable credentials are used).

For Coinbase, cryptographic consensus from multiple operators must be achieved to transfer funds out of vault storage; access to initiate and access to use vault storage private key shares is segregated and restricted to a very tightly controlled group of screened individuals that undergo periodic reviews; all employees undergo background checks in accordance with the local jurisdictions; individuals who have relevant elevated permissions within Coinbase's environment undergo annual enhanced background checks; and all remote-access by employees to Coinbase's production or corporate applications require mandatory two-factor hardware authentication.

Insurance

Each Sub-Custodian is responsible for securing SOL owned by the ETF.

Gemini

Gemini currently maintains appropriate insurance coverage for digital assets held in its cold storage system, as well as commercial crime insurance in respect of digital assets held in hot storage.

Coinbase

Coinbase currently maintains a commercial crime policy providing appropriate insurance coverage for digital assets held in its vault storage system, as well as digital assets held in online wallets.

The amounts and continuous availability of such coverage are subject to change in the sole discretion of the Sub-Custodians. The ETF's SOL is generally held in vault storage only, except for SOL held in online storage on a temporary basis to facilitate portfolio transactions, or deposits and redemptions. To date, none of the Sub-Custodians have experienced a loss due to unauthorized access from its online wallet or the vault storage.

Auditors

Ernst & Young LLP is the auditor of the ETF. The office of the auditors is located at Ernst & Young Tower, 100 Adelaide Street West, P.O. Box 1, Toronto, Ontario, M5H 0B3 Canada.

Registrar and Transfer Agent

TSX Trust Company (the "**Registrar and Transfer Agent**") is the registrar and transfer agent for the Units pursuant to a master registrar and transfer agency agreement. The Registrar and Transfer Agent is located in, and the register of Units are kept by the Registrar and Transfer Agent in, Toronto, Ontario.

Valuation Agent

CIBC Mellon Trust Company (the "**Valuation Agent**") is the valuation agent of the ETF and provides accounting and valuation services to the ETF. The Valuation Agent is located in Toronto, Ontario.

Promoter

CI GAM is also the promoter of the ETF. CI GAM took the initiative in founding and organizing the ETF and is, accordingly, the promoter of the ETF within the meaning of securities legislation of certain provinces and territories of Canada. Except as otherwise described herein, CI GAM will not receive any benefits, directly or indirectly, from the issuance of Units of the ETF offered hereunder.

Accounting and Reporting

The ETF's fiscal year is the calendar year or such other fiscal period permitted under the Tax Act as the ETF elects. The annual financial statements of the ETF shall be audited by the ETF's auditors in accordance with Canadian generally accepted auditing standards. The auditors will be asked to report on the fair presentation of the annual financial statements in accordance with the International Financial Reporting Standards. The Manager will arrange for the ETF's compliance with all applicable reporting and administrative requirements.

The Manager will keep, or arrange for the keeping of, adequate books and records reflecting the activities of the ETF. A Unitholder or his or her duly authorized representative will have the right to examine the books and records of the ETF during normal business hours at the offices of the Manager or such other location as the Manager shall determine. Notwithstanding the foregoing, a Unitholder shall not have access to any information that, in the opinion of the Manager, should be kept confidential in the interests of the ETF.

CALCULATION OF NET ASSET VALUE

The NAV per Unit for the ETF US$ Series Units is determined in U.S. dollars and the NAV per Unit for the ETF C$ Unhedged Series Units is determined in Canadian dollars.

The NAV per Unit of a series of the ETF is computed by adding up the cash, SOL and other assets of the ETF allocated to the series pro rata, less the liabilities allocated to the series pro rata, and dividing the value of the net assets of that series by the total number of Units of that series that are outstanding. The NAV per Unit of each series of the ETF so determined will be adjusted to the nearest cent per Unit of that series and will remain in effect until the time as at which the next determination of the NAV per Unit of that series of the ETF is made. The NAV of the ETF and the NAV per Unit of each series of the ETF is calculated at 4:00 p.m. (Eastern time) (the "**Valuation Time**") on each "**Valuation Day**", which is any day that the Manager is open for a full day of business. Typically, the NAV per Unit of the ETF is calculated at the Valuation Time.

The ETF issues Units directly to the Designated Broker and Dealers. The Units of each series of the ETF are offered for sale at a price equal to the NAV of the Units determined at the Valuation Time on the effective date of the subscription order on a Trading Day.

Valuation Policies and Procedures of the ETF

The following valuation procedures will be used in determining the NAV of the ETF and the NAV per Unit on each Valuation Day:

(a) the value of any cash on hand, on deposit or on call, bills and notes and accounts receivable, prepaid expenses, cash dividends to be received and interest accrued and not yet received, will be deemed to be the face amount thereof, unless the Manager determines that any such deposit, call loan, bill, note or account receivable is not worth the face amount thereof, in which event the value thereof will be deemed to be such value as the Manager determines, on such basis and in such manner as may be approved by the board of directors of the Manager to be the reasonable value thereof;

(b) the ETF's SOL will be valued based on the Solana Index maintained on Bloomberg Index Services Limited or on such other index selected by the Manager from time to time;

(c) the liabilities of the ETF will include:

  (i) all bills, notes and accounts payable of which the ETF is an obligor;

  (ii) all brokerage expenses of the ETF;

  (iii) all Management Fees;

  (iv) all contractual obligations of the ETF for the payment of money on property, including the amount of any unpaid distribution credited to the Unitholders on or before that Valuation Day;

  (v) all allowances of the ETF authorized or approved by the Manager for taxes (if any) or contingencies; and

  (vi) all other liabilities of the ETF of whatsoever kind and nature; and

(d) each transaction of purchase or sale of a portfolio asset effected by the ETF shall be reflected by no later than the next time that the NAV of the ETF and the NAV per Unit is calculated.

Prior to the calculation of the NAV of the ETF, any non-U.S. dollar denominated assets and liabilities of the ETF will be converted into U.S. currency at the prevailing rate of exchange, as determined by the Manager, on the applicable Valuation Day.

In determining the NAV of the ETF, Units subscribed for will be deemed to be outstanding immediately following the calculation of the NAV per Unit that is the issue price of the Units and the amount payable in connection with the issuance shall then be deemed to be an asset of the ETF. Units of the ETF that are being redeemed shall be deemed to remain outstanding until immediately following the calculation of the NAV per Unit that is the redemption price of the Units and thereafter, the redemption proceeds, until paid, will be a liability of the ETF.

Reporting of Net Asset Value

Following the Valuation Time on the Valuation Day, the most recent NAV per Unit of the ETF will be made available to persons or companies at no cost, by calling the Manager at 1-800-792-9355 or checking the ETF's website at www.ci.com.

The Solana Index

The ETF's SOL is priced based upon the Solana Index. The Solana Index is designed to measure the performance of a single SOL traded in U.S. dollars. The Solana Index is owned and administered by Bloomberg Index Services Limited and is co-branded with Galaxy Digital Capital Management LP.

The Solana Index is calculated using Bloomberg Index Services Limited's DAR, which is used to calculate end-of-day index level. DAR takes pricing from eligible exchanges based on the DAR Exchange Vetting Methodology. This process aims to identify trustworthy exchange platforms and encourage best practices by gathering, recording, and comparing a series of quantitative and qualitative data points. DAR's team of researchers and technical experts work closely with exchanges, regulators, and investors to collect public and non-public data points that are used to reach a reasoned determination on each of the methodology's criterion. The DAR Exchange Vetting Methodology is reviewed quarterly and updated as required to reflect the maturing digital asset marketplace and the needs of its participants. The DAR close price is a time-weighted average price derived from eligible, non-outlier trades that occur within a 30-minute window prior to the specified close time. The specified close time is 4pm and is calculated as per the DAR close price and the DAR Hourly Price Methodology.

For more details, see the description of each of the Solana Index's calculation methodology on Digital Asset Research's website at http://www.digitalassetresearch.com/. Such description has been prepared by Bloomberg Index Services Limited and neither the Manager nor the ETF make any representations or warranties as to the accuracy of such description.

The Solana Index is calculated as an average of those pricing sources selected by Bloomberg Index Services Limited, it will not necessarily be reflective of the price of SOL available on any given exchange or other venue where the ETF's trades are executed. In addition, the Solana Index is available once per day, whereas SOL trades 24 hours a day. As such, the Solana Index may not be reflective of market events and other developments that occur after its pricing window and thus the Solana Index may not be reflective of the then-available market price of SOL in periods between its calculation.

The Solana Index will publish Monday to Friday when the DAR is pricing and not currently over weekends.

BLOOMBERG is a trademark or service mark of Bloomberg Finance L.P. Bloomberg Index Services Limited's association with Galaxy Digital Capital Management LP is to act as the administrator and calculation agent of the Solana Index. Neither Bloomberg Index Services Limited nor Galaxy Digital Capital Management LP guarantee the timeliness, accurateness, or completeness of any data or information relating to the Solana Index or results to be obtained. Neither Bloomberg Index Services Limited nor Galaxy Digital Capital

Management LP make any warranty, express or implied, as to the Solana Index, any data or values relating thereto or any financial product or instrument linked to, using as a component thereof or based on the Solana Index (the "**Products**") or results to be obtained therefrom, and expressly disclaims all warranties of merchantability and fitness for a particular purpose with respect thereto. To the maximum extent allowed by law, Bloomberg Index Services Limited, its licensees, Galaxy Digital Capital Management LP and its and their respective employees, contractors, agents, suppliers, and vendors shall have no liability or responsibility whatsoever for any injury or damages—whether direct, indirect, consequential, incidental, punitive, or otherwise—arising in connection with the Solana Index, any data or values relating thereto or any Products—whether arising from their negligence or otherwise.

The NAV per Unit of a series is computed by adding up the cash and other assets of the ETF allocated to the series pro rata, less the liabilities allocated to the series pro rata, and dividing the value of the net assets of that series by the total number of Units of that series that are outstanding. The NAV per Unit so determined will be adjusted to the nearest cent per Unit of that series and will remain in effect until the time at which the determination of the NAV per Unit is made. The NAV per Unit is calculated as of the Valuation Time on each Valuation Day.

ATTRIBUTES OF THE SECURITIES

Description of the Securities Distributed

The ETF is authorized to issue an unlimited number of redeemable, transferable units of an unlimited number of series of units, each of which represents an undivided interest in the net assets of the ETF. The ETF US$ Series Units are U.S. dollar-denominated. The ETF C$ Unhedged Series Units are Canadian dollar-denominated.

On December 16, 2004, the *Trust Beneficiaries' Liability Act*, 2004 (Ontario) came into force. This statute provides that holders of units of a trust are not, as beneficiaries, liable for any default, obligation or liability of the trust if, when the default occurs or the liability arises: (i) the trust is a reporting issuer under the *Securities Act* (Ontario); and (ii) the trust is governed by the laws of the Province of Ontario. The ETF is a reporting issuer under the *Securities Act* (Ontario) and the ETF is governed by the laws of Ontario by virtue of the provisions of the Declaration of Trust.

Each Unit entitles the owner to one vote at meetings of Unitholders and is entitled to participate equally with all other Units with respect to all payments made to Unitholders, other than Management Fee Distributions, including distributions of net income and net realized capital gains and, on liquidation, to participate equally in the net assets of the ETF remaining after satisfaction of any outstanding liabilities that are attributable to Units. All Units are fully paid, with no liability for future assessments, when issued and will not be transferable except by operation of law.

Notwithstanding the foregoing, pursuant to the Declaration of Trust, the ETF may allocate and designate as payable any capital gains realized by the ETF as a result of any disposition of property of the ETF undertaken to permit or facilitate the redemption of Units of the ETF to a Unitholder whose Units of the ETF are being redeemed. All Units will be fully paid, with no liability for future assessments, when issued and will not be transferable except by operation of law. Unitholders are entitled to require the ETF to redeem their Units as outlined under the heading "Redemption and Exchange of Units".

The Units have been conditionally approved for listing on the TSX under the symbol "SOLX". Subject to satisfying the TSX's original listing requirements, the Units of the ETF will be listed on the TSX, and investors will be able to buy or sell such Units on the TSX through registered brokers and dealers in the province or territory where the investors reside. Investors may incur customary brokerage commissions in buying or selling Units. No fees are paid by investors to the Manager or the ETF in connection with buying or selling of Units on the TSX.

Redemptions of Units for Cash

On any Trading Day, Unitholders of the ETF may redeem Units of the ETF for cash at a redemption price per Unit equal to 95% of the closing price for the Units on the TSX on the effective day of the redemption, subject to a maximum redemption price per Unit equal to the NAV per Unit on the effective date of the redemption, less any applicable redemption fee determined by the Manager, in its sole discretion, from time to time. See "Redemption and Exchange of Units".

Exchange of Units for Portfolio Assets

On any Trading Day, Unitholders of the ETF may exchange the applicable PNU (or an integral multiple thereof) for cash or, if agreed to and permitted by the Manager, for cash and portfolio assets. See "Redemption and Exchange of Units".

Modification of Terms

Any amendment to the Declaration of Trust that creates a new series of Units of the ETF will not require notice to existing Unitholders of the ETF unless such amendment in some way affects the rights of existing holders of Units or the value of their investment. An amendment such as the re-designation of a series of Units of the ETF, or the termination of a series of Units of the ETF, which has an effect on a Unitholder's holdings will only become effective after at least 21 days' notice to Unitholders of the applicable series of Units of the ETF.

All other rights attached to the Units of the ETF may only be modified, amended or varied in accordance with the terms of the Declaration of Trust. See "Unitholder Matters – Amendments to the Declaration of Trust".

UNITHOLDER MATTERS

Meetings of Unitholders

Meetings of Unitholders of the ETF will be held if called by the Manager as desirable or as otherwise required by securities legislation.

Matters Requiring Unitholder Approval

NI 81-102 requires a meeting of Unitholders of the ETF to be called to approve certain changes described in NI 81-102. In the absence of an exemption, the Manager will seek Unitholder approval for any such change.

In addition, the auditors of the ETF may not be changed unless:

(i) the IRC of the ETF has approved the change; and

(ii) Unitholders have received at least 60 days' notice before the effective date of the change.

Approval of Unitholders of the ETF will be deemed to have been given if expressed by resolution passed at a meeting of Unitholders, duly called on at least 21-days' notice and held for the purpose of considering the same, by at least a majority of the votes cast.

Amendments to the Declaration of Trust

If a Unitholder meeting is required to amend a provision of the Declaration of Trust, no change proposed at a meeting of Unitholders shall take effect until the Manager has obtained the prior approval of at least a majority, or such greater or lesser percentage as may be required or permitted by securities legislation, of the votes cast at such meeting of Unitholders.

Subject to any longer notice requirements imposed under securities legislation, the Trustee is entitled to amend the Declaration of Trust by giving not less than 21-days' notice to Unitholders affected by the proposed amendment.

All Unitholders shall be bound by an amendment affecting the ETF from the effective date of the amendment.

The Trustee may amend the Declaration of Trust without the approval of or prior notice to any Unitholders, for the following purposes:

(a) to ensure continuing compliance with securities legislation, the Tax Act and other applicable laws in effect from time to time;

(b) to provide additional protection for Unitholders;

(c) to deal with minor or clerical matters or correcting typographical mistakes, ambiguities, omissions or errors;

(d) to permit additional funds to be established or continued under the Declaration of Trust or to permit additional series of units to be established under the Declaration of Trust, provided that the addition of such funds or series will not prejudice the rights of Unitholders of any existing fund; or

(e) to provide for other changes in respect of the administration of the funds under the Declaration of Trust, if the Trustee is of the reasonable opinion that the amendment will not be prejudicial to Unitholders of those funds and is necessary or desirable.

Permitted Mergers

The ETF may, without Unitholders' approval, enter into a merger or other similar transaction which has the effect of combining the funds or their assets (a "**Permitted Merger**") with any other investment fund or funds that have investment objectives that are similar to the ETF's portfolio, subject to:

(a) approval of the merger by the ETF's IRC in accordance with NI 81-107;

(b) the ETF being reorganized with, or its assets being transferred to, another mutual fund to which NI 81-102 and NI 81-107 apply, and that is managed by the Manager, or an affiliate of the Manager;

(c) compliance with certain other requirements of applicable securities legislation; and

(d) Unitholders have received at least 60 days' notice which notice may be by way of press release, before the effective date of the Permitted Merger.

In connection with a Permitted Merger, the merging funds will be valued at their respective NAVs for the purpose of such transaction.

Reporting to Unitholders

The Manager, on behalf of the ETF, will in accordance with applicable laws furnish to each Unitholder unaudited semi-annual financial statements and an interim management report of fund performance for the ETF within 60 days of the end of each semi-annual period and audited annual financial statements and an annual management report of fund performance for the ETF within 90 days of the end of each financial year. Both the semi-annual and the annual financial statements of the ETF will contain a statement of financial position, a statement of comprehensive income, a statement of changes in net assets attributable to holders of redeemable units, a statement of cashflows and a schedule of investment portfolio.

Any tax information necessary for Unitholders to prepare their annual federal income tax returns will also be distributed to them within 90 days after the end of each taxation year of the ETF. Neither the Manager nor the Registrar and Transfer Agent are responsible for tracking the adjusted cost base of a Unitholder's Units. Unitholders should consult with their tax or investment adviser in respect of how to compute the adjusted cost base of their Units and in particular how designations made by the ETF to a Unitholder affect the Unitholder's tax position.

The NAV per Unit is determined by the Manager on each Trading Day and will usually be published daily in the financial press.

TERMINATION OF THE ETF

Subject to complying with applicable securities law, the Manager, in its capacity as Trustee of the ETF, may terminate the ETF at its discretion if the Manager is of the opinion, acting fairly, honestly and in the best interest of the Unitholders, that the NAV of the ETF is insufficient to warrant the cost of continuing the administration of the ETF. In accordance with applicable securities law, Unitholders will be provided 60 days' advance written notice of the termination.

If the ETF is terminated, the Trustee is empowered to take all steps necessary to effect the termination of the ETF. Prior to terminating the ETF, the Trustee shall discharge all of the liabilities of the ETF and distribute the net assets of the ETF to the Unitholders.

Upon termination of the ETF, each Unitholder shall be entitled to receive at the Valuation Time on the termination date out of the assets of the ETF: (i) payment for that Unitholder's Units at the NAV per Unit determined at the Valuation Time on the termination date; plus (ii) where applicable, any net income and net realized capital gains that are owing to or otherwise attributable to such Unitholder's Units that have not otherwise been paid to such Unitholder; less (iii) any applicable redemption charges and any taxes that are required to be deducted. Payment shall be made by cheque or other means of payment payable to such Unitholder and drawn on the ETF's bankers and may be mailed by ordinary post to such Unitholder's last address appearing in the register of Unitholders or may be delivered by such other means of delivery acceptable to both the Manager and such Unitholder.

The rights of Unitholders to exchange and redeem Units described under "Redemption and Exchange of Units" will cease as and from the date of termination of the ETF.

PLAN OF DISTRIBUTION

Units of the ETF are being offered for sale on a continuous basis by this prospectus and there is no maximum number of Units that may be issued. The Units are offered for sale at a price equal to the NAV per Unit of such series of Units determined at the Valuation Time on the effective date of the subscription order.

The Units have been conditionally approved for listing on the TSX under the symbol "SOLX". Subject to satisfying the TSX's original listing requirements, the Units of the ETF will be listed on the TSX, and investors will be able to buy or sell such Units on the TSX through registered brokers and dealers in the province or territory where the investors reside. Investors may incur customary brokerage commissions in buying or selling Units. No fees are paid by investors to the Manager or the ETF in connection with buying or selling of Units on the TSX.

Non-Resident Unitholders

At no time may (i) non-residents of Canada, (ii) partnerships that are not Canadian partnerships or (iii) a combination of non-residents of Canada and such partnerships (all as defined in the Tax Act) be the beneficial owners of a majority of the Units of the ETF (on either a number of Units, or fair market value basis) and the Manager shall inform the Registrar and Transfer Agent of the ETF of this restriction. The Manager may require declarations as to the jurisdictions in which a beneficial owner of Units is resident and, if a partnership, its status as a Canadian partnership. If the Manager becomes aware, as a result of requiring such declarations as to beneficial ownership or otherwise, that the beneficial owners of 40% of the Units of the ETF then outstanding (on either a number of Units, or fair market value basis) are, or may be, non-residents and/or partnerships that are not Canadian partnerships, or that such a situation is imminent, the Manager may make a public announcement thereof. If the Manager determines that more than 40% of the Units of the ETF (on either a number Units, or fair market value basis) are beneficially held by non-residents and/or partnerships that are not Canadian partnerships, the Manager may send a notice to such non-residents and/or partnerships, chosen in inverse order to the order of acquisition or in such manner as the Manager may consider equitable and practicable, requiring them to sell their Units or a portion thereof within a specified period of not less than 30 days. If the Unitholders, receiving such notice have not sold the specified number of Units, or provided the Manager with satisfactory evidence that they are not non-residents or partnerships other than Canadian partnerships within such period, the Manager may on behalf of such Unitholders, sell such Units and, in the interim, shall suspend the voting and distribution rights attached to such Units. Upon such sale, the affected holders shall cease to be beneficial holders of Units and their rights shall be limited to receiving the net proceeds of sale of such Units.

Notwithstanding the foregoing, the Manager may determine not to take any of the actions described above if the Manager has been advised by legal counsel that the failure to take any of such actions would not adversely impact the status of the ETF as a mutual fund trust, for purposes of the Tax Act or, alternatively, may take such other action or actions as may be necessary to maintain the status of the ETF as a mutual fund trust, for purposes of the Tax Act.

RELATIONSHIP BETWEEN THE ETF AND THE DEALERS

The Manager, on behalf of the ETF, may enter into various agreements (each, a "**Dealer Agreement**") with registered dealers (that may or may not be a Designated Broker) (each such registered dealer, a "**Dealer**") pursuant to which the Dealers may subscribe for Units of the ETF as described under "Purchases of Units". Such registered dealers may be related to the Manager. See "Organization and Management Details of the ETF – Conflicts of Interest".

A Dealer Agreement may be terminated by the registered dealer at any time by notice to the Manager, provided that, except in certain conditions, no such termination will be permitted after the registered dealer has subscribed for Units of the ETF and such subscription has been accepted by the Manager.

No Designated Broker or Dealer has been involved in the preparation of this prospectus, nor has it performed any review of the contents of this prospectus. The Designated Broker and Dealers do not act as underwriters of the ETF in connection with the distribution of its Units under this prospectus. See "Organization and Management Details of the ETF – Conflicts of Interest".

PRINCIPAL HOLDERS OF UNITS

The Manager currently holds one ETF US$ Series Unit and one ETF C$ Unhedged Series Unit, comprising all of the currently issued and outstanding Units. From time to time, another investment fund managed by the Manager or an affiliate thereof, may beneficially own, directly or indirectly, more than 10% of the Units.

PROXY VOTING DISCLOSURE FOR PORTFOLIO SECURITIES HELD

The ETF is not expected to hold portfolio securities; nevertheless, the Manager has a Proxy Voting Policy and Guidelines (the "**Guidelines**") that have been designed to provide general guidance, in compliance with the applicable legislation, for the voting of proxies. The Guidelines set out the voting procedures to be followed in voting routine and non-routine matters, together with general guidelines suggesting a process to be followed in determining how and whether to vote proxies. Although the Guidelines allow for the creation of a standing policy for voting on certain routine matters, each routine and non-routine matter must be assessed on a case-by-case basis to determine whether the applicable standing policy or general Guidelines should be followed. The Guidelines also address situations in which the Manager may not be able to vote, or where the costs of voting outweigh the benefits. If the ETF is invested in an underlying fund that is also managed by the Manager, the proxy of the underlying fund will not be voted by the Manager. However, the Manager may arrange for the Unitholders to vote their share of those securities. A copy of the Guidelines is available upon request, at no cost, by calling the Manager toll-free at 1-800-792-9355 or by writing to the Manager at 15 York Street, Second Floor, Toronto, Ontario M5J 0A3.

After August 31 of each year, Unitholders may obtain upon request to the Manager, free of charge, the proxy voting records of the ETF, if any, for the year ended June 30 for that year. These documents also will be made available on the Manager's website, www.ci.com.

MATERIAL CONTRACTS

The following contracts can reasonably be regarded as material to purchasers of Units:

(a) Declaration of Trust;

(b) Management Agreement;

(c) Subadvisor Agreement;

(d) Cidel Custodian Agreement;

(e) Gemini Sub-Custodian Agreement; and

(f) Coinbase Sub-Custodian Agreement.

Copies of the foregoing documents may be inspected during business hours at the head office of the Manager, which is located at 15 York Street, Second Floor, Toronto, Ontario M5J 0A3.

LEGAL AND ADMINISTRATIVE PROCEEDINGS

The ETF is not involved in any legal proceedings, nor is the Manager aware of existing or pending legal or arbitration proceedings involving the ETF.

EXPERTS

Ernst & Young LLP, the auditors of the ETF, have consented to the use of their report dated April 9, 2025 to the Unitholders of the ETF. Ernst & Young LLP has confirmed that they are independent with respect to the ETF within the meaning of the Rules of Professional Conduct of the Chartered Professional Accountants of Ontario.

EXEMPTIONS AND APPROVALS

The ETF has obtained exemptive relief from the Canadian securities regulatory authorities:

(a) to permit a Unitholder to acquire more than 20% of the Units through purchases on the TSX without regard to the takeover bid requirements of applicable Canadian securities legislation; and

(b) to relieve the ETF from the requirement that a prospectus contain a certificate of the underwriters.

OTHER MATERIAL FACTS

Management of the ETF

The Manager may, at any time and without seeking Unitholder approval, assign the Declaration of Trust or the Management Agreement, as applicable, to an affiliate.

PURCHASERS' STATUTORY RIGHTS OF WITHDRAWAL AND RESCISSION

Securities legislation in certain of the provinces and territories of Canada provides purchasers with the right to withdraw from an agreement to purchase securities. This right may be exercised within two business days after receipt or deemed receipt of a prospectus and any amendment. In several of the provinces and territories, the securities legislation further provides a purchaser with remedies for rescission, revisions of the price or damages if the prospectus and any amendment contain a misrepresentation or is not delivered to the purchaser, provided that the remedies for rescission, revisions of the price or damages are exercised by the purchaser within the time limit prescribed by the securities legislation of the purchaser's province or territory. The purchaser should refer to any applicable provisions of the securities legislation of the purchaser's province or territory for the particulars of these rights or consult with a legal adviser.

DOCUMENTS INCORPORATED BY REFERENCE

Additional information about the ETF is, or will be, available in the following documents:

(a) the most recently filed comparative annual financial statements of the ETF, together with the accompanying reports of the auditor;

(b) any interim financial statements of the ETF filed after those annual financial statements;

(c) the most recently filed annual management reports of fund performance of the ETF;

(d) any interim management reports of fund performance of the ETF filed after that most recently filed annual management reports of fund performance of the ETF; and

(e) the most recently filed ETF Facts of the ETF.

These documents are or will be incorporated by reference into this prospectus, which means that they legally form part of this document just as if they were printed as part of this document. You can obtain a copy of these documents, at your request, and at no cost, by calling: 1-800-792-9355 (toll free) or by contacting your dealer. These documents are available at no cost on the ETF's website at www.ci.com. These documents and other information about the ETF are also available on the internet at www.sedarplus.ca.

In addition to the documents listed above, any documents of the type described above that are filed on behalf of the ETF after the date of this prospectus and before the termination of the distribution of the ETF are deemed to be incorporated by reference into this prospectus.

INDEPENDENT AUDITOR'S REPORT

To the Unitholder and Trustee of

CI Galaxy Solana ETF
(the "**ETF**")

Opinion

We have audited the financial statement of the ETF, which comprises the Statement of Financial Position as at April 9, 2025 and notes to the financial statement, including material accounting policy information.

In our opinion, the accompanying financial statement presents fairly, in all material respects, the financial position of the ETF as at April 9, 2025 in accordance with International Financial Reporting Standards ("**IFRSs**").

Basis for Opinion

We conducted our audit in accordance with Canadian generally accepted auditing standards. Our responsibilities under those standards are further described in the *Auditor's Responsibilities for the Audit of the Financial Statement* section of our report. We are independent of the ETF in accordance with the ethical requirements that are relevant to our audit of the financial statement in Canada, and we have fulfilled our other ethical responsibilities in accordance with these requirements. We believe that the audit evidence we have obtained is sufficient and appropriate to provide a basis for our opinion.

Responsibilities of Management and those Charged with Governance for the Financial Statement

Management is responsible for the preparation and fair presentation of the financial statement in accordance with IFRSs, and for such internal control as management determines is necessary to enable the preparation of a financial statement that is free from material misstatement, whether due to fraud or error.

In preparing the financial statement, management is responsible for assessing the ETF's ability to continue as a going concern, disclosing, as applicable, matters related to going concern and using the going concern basis of accounting unless management either intends to liquidate the ETF or to cease operations, or has no realistic alternative but to do so.

Those charged with governance are responsible for overseeing the ETF's financial reporting process.

Auditor's Responsibilities for the Audit of the Financial Statement

Our objectives are to obtain reasonable assurance about whether the financial statement as a whole is free from material misstatement, whether due to fraud or error, and to issue an auditor's report that includes our opinion. Reasonable assurance is a high level of assurance, but is not a guarantee that an audit conducted in accordance with Canadian generally accepted auditing standards will always detect a material misstatement when it exists. Misstatements can arise from fraud or error and are considered material if, individually or in the aggregate, they could reasonably be expected to influence the economic decisions of users taken on the basis of this financial statement.

As part of an audit in accordance with Canadian generally accepted auditing standards, we exercise professional judgment and maintain professional skepticism throughout the audit. We also:

- Identify and assess the risks of material misstatement of the financial statement, whether due to fraud or error, design and perform audit procedures responsive to those risks, and obtain audit evidence that is sufficient and appropriate to provide a basis for our opinion. The risk of not detecting a material misstatement resulting from fraud is higher than for one resulting from error, as fraud may involve collusion, forgery, intentional omissions, misrepresentations, or the override of internal control.

- Obtain an understanding of internal control relevant to the audit in order to design audit procedures that are appropriate in the circumstances, but not for the purpose of expressing an opinion on the effectiveness of the ETF's internal control.

- Evaluate the appropriateness of accounting policies used and the reasonableness of accounting estimates and related disclosures made by management.

- Conclude on the appropriateness of management's use of the going concern basis of accounting and, based on the audit evidence obtained, whether a material uncertainty exists related to events or conditions that may cast significant doubt on the ETF's ability to continue as a going concern. If we conclude that a material uncertainty exists, we are required to draw attention in our auditor's report to the related disclosures in the financial statement or, if such disclosures are inadequate, to modify our opinion. Our conclusions are based on the audit evidence obtained up to the date of our auditor's report. However, future events or conditions may cause the ETF to cease to continue as a going concern.

- Evaluate the overall presentation, structure and content of the financial statement, including the disclosures, and whether the financial statement represents the underlying transactions and events in a manner that achieves fair presentation.

We communicate with those charged with governance regarding, among other matters, the planned scope and timing of the audit and significant audit findings, including any significant deficiencies in internal control that we identify during our audit.

CI GALAXY SOLANA ETF
(the "**ETF**")

NOTES TO STATEMENT OF FINANCIAL POSITION
April 9, 2025

1. The ETF

The ETF is an exchange traded mutual fund established under the laws of the Province of Ontario, pursuant to the terms of the Declaration of Trust. The ETF is a mutual fund under the securities legislation of the provinces and territories of Canada.

CI Global Asset Management is the manager and trustee (the "**Manager**" and the "**Trustee**") of the ETF. The Manager is a wholly-owned subsidiary of CI Financial Corp. (Toronto Stock Exchange (TSX): CIX; New York Stock Exchange (NYSE): CIXX). Cidel Trust Company is the custodian ("**Cidel Custodian**") of the ETF.

The principal office of the ETF and CI Global Asset Management is located at 15 York Street, Second Floor, Toronto, Ontario M5J 0A3.

The ETF's investment objective is to provide unitholders with exposure to Solana tokens ("**SOL**") through an institutional-quality fund platform. The ETF offers unitholders exposure to SOL by investing directly in SOL with the ETF's holdings of SOL priced based on the Bloomberg Galaxy Solana Index (the "**Solana Index**"). The Solana Index is designed to measure the performance of a single SOL traded in U.S. dollars.

The Statement of Financial Position as at April 9, 2025 was authorized for issue by the Manager on behalf of the ETF on April 9, 2025.

2. Material Accounting Policy Information

The Statement of Financial Position has been prepared in accordance with International Financial Reporting Standards (IFRSs) relevant to preparing such a financial statement.

The following is the material accounting policy information used by the ETF:

a. Cash

Cash represents cash on deposit.

b. Fair value of financial instruments and investment transactions

With the exception of cash, the ETF measures its financial instruments at fair value through profit or loss. Investment transactions are recorded on their trade date.

c. Unit valuation

Net asset value (the "**NAV**") per unit for each series of units of the ETF is calculated at the end of each day on which the Manager is open for a full day of business by dividing the net asset value of each series of units by the respective outstanding units of that series.

d. Classification of units

The units of the ETF are classified as financial liabilities in accordance with IAS 32 – Financial Instruments: Presentation ("**IAS 32**"), as they do not meet the definition of puttable instruments to be classified as equity in accordance with IAS 32 for financial reporting purposes.

e. Functional and presentation currency

The functional and presentation currency of the ETF is U.S. dollars.

f. Foreign exchange

Foreign currency amounts are translated into the functional currency as follows: fair value of investments, foreign currency forward contracts and other assets and liabilities at the closing rate of exchange on each business day; income and expenses, purchases and sales and settlements of investments at the rate of exchange prevailing on the respective dates of such transactions.

g. Use of estimates

The preparation of the financial statement in accordance with IFRSs requires the Manager to make estimates and assumptions that affect the reported amounts of assets and liabilities at the date of the financial statement. These estimates are made based on information available as at the date of the financial statement. Actual results could materially differ from those estimates.

3. Management fees and other expenses

Management fee

An annual management fee (the "**Management Fee**") of 0.40% of the NAV of each series of the ETF, calculated daily and payable monthly in arrears, plus applicable taxes, is paid to the Manager.

In consideration for the Management Fee, the Manager of the ETF provides management services required in the day-to-day operations of the ETF, including, without limitation and as applicable: investment advisory and portfolio management services, implementation of the ETF's investment strategy, negotiating contracts with certain third-party service providers, including, but not limited to, subadvisors, custodians, sub-custodians, registrars, transfer agents, auditors and printers; authorizing the payment of operating expenses incurred on behalf of the ETF; maintaining certain accounting and financial records; calculating the amount and determining the frequency of distributions, if any, by the ETF; ensuring that Unitholders are provided with financial statements and other reports as are required from time to time by applicable law; ensuring that the ETF complies with all other regulatory requirements including continuous disclosure obligations under applicable securities laws; administering purchases, redemptions and other transactions in Units; and arranging for any payments required upon termination of the ETF.

The Subadvisor of the ETF is remunerated by the Manager out of the Management Fee.

Staking Service Fee

In addition to the Management Fee, the Manager is entitled to receive a fee equal to a portion of the staking rewards generated for the ETF by staking arrangements (net of the fees payable to the validator) such that no less than 65% of the rewards accrue to the ETF and up to 35% of the rewards accrue to the Manager (the "**Staking Service Fee**"). The Staking Service Fee will be calculated daily and paid monthly, in arrears, plus applicable taxes, and is intended to compensate the Manager for the additional work required to administer staking arrangements for the ETF. The Staking Service Fee charged by the Manager will only be deducted from any rewards generated by staking arrangements which will generate income to the ETF.

Operating expenses

In addition to the Management Fee, the ETF pays for all ordinary expenses incurred in connection with its operation and administration. Unless otherwise waived or reimbursed by the Manager, and subject to compliance with NI 81-102, the expenses for the ETF include, as applicable, without limitation: all costs and expenses associated with the execution of transactions in respect of the ETF's investment in SOL and the ETF's Staking Arrangements; audit fees; fees payable to third-party service providers; trustee and custodial expenses including fees payable to Cidel Custodian and the Sub-Custodians, as applicable; valuation, accounting and record keeping costs; legal expenses; prospectus preparation and filing expenses; costs associated with delivering documents to Unitholders; listing fees and expenses and other administrative expenses and costs incurred in connection with the continuous public filing requirements; costs and expenses of preparing financial and other reports, costs and expenses arising as a result of complying with all applicable laws, regulations and policies; Depositary fees; bank related fees and interest charges; extraordinary expenses; reports to Unitholders and servicing costs; registrar and transfer agent fees; fees and expenses of the members of the Independent Review Committee (the "**IRC**"); expenses related to compliance with National Instrument NI 81-107 *Independent Review Committee for Investment Funds*; fees and expenses relating to the voting of proxies by a third party; premiums for directors' and officers' insurance coverage for the members of the IRC; income taxes; all applicable sales taxes; brokerage expenses and commissions; and withholding taxes. Such expenses also include expenses of any action, suit or other proceedings in which or in relation to which the Manager, the Subadvisor, Cidel Custodian or the Sub-Custodians, the IRC or any of their respective officers, directors, employees, consultants or agents are entitled to, as indemnified by the ETF.

4. Capital Management and Related Party Transactions

Redeemable units issued and outstanding represent the capital of the ETF. The ETF is authorized to issue an unlimited number of redeemable, transferable units of each series. The ETF has no restrictions or specific capital requirements, except for the minimum subscriptions' amounts. In accordance with the investment objective outlined in this document, the ETF endeavours to invest subscriptions received in appropriate investments while maintaining sufficient liquidity.

On April 9, 2025, the Manager made an initial investment of $17 in the ETF.
